## 25<sup>th</sup> ANNIVERSARY

### ISSUE 1961 - 1985

---

Celebrating the first 25 years of *INTERNATIONAL CHEMICAL ENGINEERING*, AIChE presents this special volume highlighting major contributions by internationally recognized and acclaimed researchers who have had a decided impact on innovative work in chemical engineering.

This collection presents a selection of translations of important papers previously published in *INTERNATIONAL CHEMICAL ENGINEERING* which have contributed to advances in research in such areas as combustion and detonation, transport theory, catalysis, and mass transfer. They reflect the changing character, broadening scope and international nature of chemical engineering research.

**SAMPLE CONTENTS INCLUDE:** On the nature of thermal motion in liquids.

*A.S. Predvoditelev (USSR)*

The kinetics of steady-state complex reactions.

*M.I. Temkin (USSR)*

Continuous expression of slurry in a screw press.

*M. Shirato, T. Murase, M. Iwata, N. Hayashi, & Y. Ogawa (Japan)*

Electrochemical determination of liquid-solid mass transfer in a fixed-bed irrigated gas-liquid reactor with downward cocurrent flow.

*Ch.B. DeLaunay, A. Storck, A. Laurent, & J.-C. Charpentier (France)*

Catalytic reduction of nitric oxide with hydrocarbons.

*S. Kasaoka, H. Tsumaki, & T. Kitamura (Japan)*

Stability and dynamics of heterogenous catalytic reaction systems.

*G. Eigenberger (Federal Republic of Germany)*

Deactivation of catalysts. I. Chemical and kinetic aspects.

*P. Forzatti, G. Buzzi-Ferraris, M. Morbidelli & S. Carrá. (Italy)*

Microbial processing of petroleum for the production of food.

*J. Bathory & E. Vamos (Hungary)*

*Softcover. \$50*

*248 pp.*

*Foreign extra: \$6*

*(Special 20% discount to 1989 subscribers to International Chemical Engineering.)*

**An important addition to the reference shelf of the practicing engineer.**

**An important study tool for undergraduate and graduate students.**
