

McGraw-Hill: ENGINEERING TODAY FOR TOMORROW'S ENGINEERS

McGraw-Hill, the leading publisher for chemical engineering students, has just the right chemistry for you and your classroom.

Here's a glimpse at what we have to offer in 1988.

PROCESS EVALUATION AND DESIGN

James M. Douglas, University of Massachusetts
0-07-017762-7

This book helps students to develop a systematic procedure for creating a process flowsheet, for identifying its dominant design variables, for identifying process alternatives for consideration, and for quickly using alternatives.

TRANSPORT PHENOMENA: A Unified Approach

Robert S. Brodkey and **Harry C. Hershey**,
both of The Ohio State University
0-07-007963-3

The "approach" is to teach the basic equations of transport phenomena in a unified manner and use the analogy between heat transfer and mass and momentum.

OPTIMIZATION OF CHEMICAL PROCESSES

Thomas F. Edgar and **David M. Himmelblau**,
both of the University of Texas
0-07-018991-9

This authoritative text demonstrates the most recent applications of optimization theory to chemical engineering and the process industries.

And from our 1987 list

APPLIED NUMERICAL METHODS WITH PERSONAL COMPUTERS

Alkis Constantinides, Rutgers University
0-07-079690-4

One of the first books to present the theory and application of numerical methods for solving chemical engineering problems with personal computers.

INTRODUCTION TO CHEMICAL ENGINEERING THERMODYNAMICS, 4/e

J.M. Smith, University of California, Davis
Hendrick C. Van Ness, Rensselaer Polytechnic Institute
0-07-058703-5

The new edition of this internationally acclaimed text supports a careful exposition of the laws of thermodynamics with abundant applications.
