

NEW AND BEST-SELLING BOOKS FROM WILEY-INTERSCIENCE

FUSION PLASMA ANALYSIS

Weston M. Stacey, Jr.

This volume deals with the physics of magnetically-confined fusion plasmas. Plasma physics is treated as an element in the development of fusion power, with important technological constraints and interactions included in the analysis. The development of the material starts from first principles and is carried through to an engineering physics formulation that can be applied to the analysis of fusion reactor plasmas.

approx. 384 pp. (1-08095-0) 1980 \$30.00

SPECTROSCOPIC TECHNIQUES FOR ORGANIC CHEMISTS

James W. Cooper, Tufts University

This introductory text identifies organic compounds by spectroscopic means. It covers the usual techniques of infrared (IR), proton nuclear magnetic resonance, and mass spectroscopy as well as the use of carbon-13 nmr spectroscopy and Fourier transform techniques. Uses more than 200 actual spectra as examples, both in the explanation and problem sections. The text also covers computer methods of iterating theoretical nmr spectra for a best fit with experimental ones using the popular LACON III program in a conversational timesharing version.

376 pp. (1-05166-7) 1980 \$19.95

APPLIED REGRESSION ANALYSIS, 2nd Edition

Norman R. Draper and Harry Smith, Jr.

A comprehensive introduction to the fundamentals of regression analysis emphasizing understanding of the concepts and the application of the methods, rather than the development of the theory. This expanded edition includes many new exercises as well as new material on such pertinent topics as inverse regression, transformation of the response variable, and nonlinear estimation.

approx. 600 pp. (1-02995-5) Dec. 1980 \$22.50 (tent.)

APPLIED SYMBOLIC LOGIC

Edward P. Lynch

Develops a basic foundation in applied symbolic logic as a powerful communications tool. The author explains three applications of the logic: the use of Boolean algebra in graphic form to show the relationships in any system of on-off events; a new development involving implication and inference; and the use of symbolic logic in fault tree analysis.

approx. 272 pp. (1-06256-1) 1980 \$36.00

CHEMICAL CONCEPTS IN POLLUTANT BEHAVIOR

Ian J. Tinsley, Oregon State University

Intentionally or by accident, chemicals are constantly being released into the environment. How long will they persist there? Will they evaporate into the atmosphere, leach into surface water, or be immobilized by strong adsorption to soil? Unique in approach, this book synthesizes basic ideas from many areas of chemistry to offer answers to these and other questions.

265 pp. (1-03825-3) 1979 \$24.95

QUANTITY FOOD SANITATION, 3rd Edition

Karla Longrée

Longrée presents up-to-date information on the major reservoirs of various contaminants, including microorganisms, causing foodborne illnesses. Topics include the conditions leading to contamination of ingredients and menu items while being prepared, stored, and served; the conditions favoring multiplication of contaminating bacteria; and appropriate measures of control.

456 pp. (106424-6) 1980 \$27.50

Books under consideration as classroom texts are available for a 60-day free examination. Write to Jules Kazimir.

HANDLING RADIOACTIVITY: A PRACTICAL APPROACH FOR SCIENTISTS AND ENGINEERS

D.C. Stewart

A broad overview of all of the many factors involved in the safe handling of radioactive materials on the bench scale. Administrators of nuclear-oriented programs, architect-engineers, nuclear facility managers and those responsible for training of personnel will find many practical matters of interest. The more highly technical areas (dosimetry, shielding, nuclear criticality) are surveyed and summaries presented in straightforward, non-mathematical language.

approx. 416 pp. (1-04557-8) Dec. 1980 \$38.00 (tent.)

CARBON-13 NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY, 2nd Ed.

George C. Levy, Robert L. Lichter, & Gordon L. Nelson

Introduces 13 nmr spectroscopy to organic chemists, with some detailed treatments of 13 nmr included that are appropriate for physical chemists and others. Also presents the large body of currently evolving techniques that are extending the applicability of 13 nmr. This updated edition greatly expands treatment of spin relaxation, natural products, and synthetic and biopolymers.

352 pp. (1-53157-X) 1980 \$22.50

PRINCIPLES OF COLOR TECHNOLOGY, 2nd Edition

Fred W. Billmeyer, Jr. and Max Saltzman

Provides simple yet comprehensive and basic approaches to what produces and affects color, how to describe color in words and numbers, arrange color in ordered systems, measure color with instruments, calculate color differences and set color tolerances. Dyes and pigments, color mixing and color matching (both visual and computer aided), recent advances, and problem areas are examined. An extensive annotated bibliography is included.

approx. 200 pp. (1-03052-X) Feb. 1981 \$18.00 (tent.)

PRINCIPLES OF POLYMER PROCESSING

Zehev Tadmor & Costas G. Gogos

This book presents the first comprehensive and functionally useful engineering analysis of the underlying principles and mechanisms of polymer processing. Traditionally, the field has been analyzed in terms of prevailing processing methods and machinery. Tadmor and Gogos take a novel approach. The authors propose that any of these prevailing processing methods can be broken down into a shaping step and into a set of clearly defined elementary steps that prepare the polymeric raw material for shaping.

736 pp. (1-84320-2) 1979 \$37.50

ENCYCLOPEDIA OF COMMON NATURAL INGREDIENTS USED IN FOOD, DRUGS, AND COSMETICS

Albert Y. Leung

Here's an up-to-date, practical reference for students and technologists, covering over 300 naturally occurring ingredients used commercially today. Information includes source, habitat, parts used, preparation, physical and chemical description, chemical composition, biological activity, commercially available forms, uses, safe levels, and regulatory status. An appendix contains the structural formulae for all compounds discussed.

409 pp. (1-04954-9) 1980 \$47.00

PULP AND PAPER

Chemistry and Chemical Technology, 3rd Ed.,
Vols. 1, 2, & 3

James P. Casey

Here's an in-depth look at the chemistry and chemical technology involved in the manufacture of pulp and paper, the properties of paper, and the uses for paper. The new edition contains contributions by forty recognized authorities in the field. Emphasizing the underlying science and technology, this edition reviews, in detail, chemical and engineering principles.

Vol. 1: 820 pp. (1-03175-5) 1980 \$55.00

Vol. 2: approx. 768 pp. (1-03176-3) Oct. 1980 \$39.95 (tent.)

Vol. 3: approx. 700 pp. (1-03177-1) Nov. 1980 \$48.50 (tent.)

SYNTHETIC FUELS FROM COAL Overview and Assessment

Larry L. Anderson and David A. Tillman

A timely detailed description of the principles, processes and products of coal conversion systems. Weighs the need for alternatives to gas and oil, and the prospects of coal conversion, its costs, and its environmental consequences, providing a managerially oriented perspective on the technical and economic realities of producing synthetic fuels from coal.

158 pp. (1-01784-1) 1979 \$16.95
