

BRAUN

Engineers - Constructors

engineering for more energy requires new ideas - YOURS

With a background of 65 years of engineering for the process industries, C F Braun & Co occupies a unique ground-floor position in three of the newer energy fields — coal gasification, oil shale processing, and nuclear fuels. Our nuclear projects include plants for fuel fabrication, fuel reprocessing, and power generation. We are also engineering and will construct plants to convert coal and oil shale to clean commercial fuels.

You, as an engineer, recognize that your future job security and shortest route to promotion lie in areas of new industrial technology. You want individual recognition for your ideas. You want to be involved with new concepts. You want to work in a congenial

atmosphere with senior engineers who can help you advance rapidly in your career. You want to work in a company that provides the ideal environment for your professional growth. All of these, you will find at Braun.

The rapid growth of our engineering and construction work for the energy-conversion industries has opened many career positions in our Engineering Headquarters at Alhambra, California and in our Eastern Engineering Center at Murray Hill, New Jersey. For more information, please write to C F Braun & Co, Department K, Alhambra, California 91802 or Murray Hill, New Jersey 07974.
