

# Come closer. It's only a modacrylic.

The leopard was made by a taxidermist. Its coat is a modacrylic textile fiber made by Union Carbide from several basic chemicals. It's called Dynel.

Of course, man-made fibers aren't new. But for versatility, Dynel probably has no equal. We can make it as soft and warm as fur for your coat. Or so tough it approaches the strength of steel.

You'll find it in blankets, work clothes, automobile upholstery, toys, jewelry. In carpets, towels, drapes, paint rollers.

And since Dynel is chemical-resistant, durable and virtually nonflammable, it's used in many more ways. On laminated decks of boats. For tents. As

overlays for storage tanks and air ducts.

But regardless of all its practical uses, Dynel is most famous for something else. It's great for making wigs. For blondes and brunettes and redheads.

Remarkable fiber? We think so. But haven't you found that a lot of remarkable things come from Union Carbide?
