SCALLOPING REQUIREMENTS

EQUIPMENT NEEDED

- Swim mask
- Snorkel
- Small mesh bag
- Divers-down flag (required by law)

- Displayed on vessel must be at least 20 inches by 24 inches with a stiffer part to keep the flag unfurled. Should only be displayed while snorkelers are in the water. Display above the vessel’s highest point.
- Tethered to diver, must be at least 12 inches by 12 inches, mandatory when using a mask and snorkel from the beach unless it is a marked swimming area.
- You must make reasonable efforts to stay within 300 feet of a divers-down flag on open waters and within 100 feet of a flag within rivers, inlets, or navigation channels.

Boat

- Usually required to get to the best scalloping areas. In shallow water, it is possible to wade for scallops in the seagrass, or to collect them from a shallow-draft boat using a dip net or landing net, but these methods are not very productive. Most scallopers go by boat into the scallops by hand.

Boat

- Usually required to get to the best scalloping areas. In shallow water, it is possible to wade for scallops in the seagrass, or to collect them from a shallow-draft boat using a dip net or landing net, but these methods are not very productive. Most scallopers go by boat into shallow water, usually 4 to 10 feet deep where they anchor up their dive flag and snorkel over the beds, collecting the scallops by hand.

CARE AND HANDLING

When brought to the boat, scallops should be immediately placed on ice in a cooler for the trip to shore unless you are going to cook them immediately. Scallops should be handled gently, as the muscle holding the shells together is easily damaged. Place scallops in a strainer with a fine mesh bag or use a seive and place in a cooler. As you are putting shells in the cooler, make sure to place the shells right side up to keep the scallops from getting injured.

Though not required, collecting scallops that are at least 3 inches in length before they are 1 year old is preferred, as they will have more time to grow and spawn in the fall.

COLLECTING

RECIPE

FRIED SCALLOPS

Prepare an egg wash by beating 1 egg in 1/2 cup milk. Season wash to personal preference with salt and pepper. Dip scallop meats in egg wash, then coat with any prepared seafood breading or seasoned bread crumbs. Fry quickly (1–2 minutes or until golden brown) in hot, not smoking, grease (375°F). Drain on paper towels.

SIMPLY DELICIOUS SCALLOPS

Sauté 3 pounds Florida scallops in 2 tablespoons melted butter in a large skillet over medium heat. Stir until opaque, about 3 minutes. Overcooking makes the texture rubbery. Remove scallops from skillet and set aside.

Wipe out skillet, then melt 1/2 cup butter over medium-low heat, add 2 cloves garlic and salt and pepper to taste. Stir for 3 minutes and add scallops.

Serve immediately over prepared pasta of your choice, such as angel hair. Garnish with fresh dill and season with freshly ground pepper.

SCALLOPING LICENSE

You must have a current Florida saltwater fishing license to scalp. Florida residents 16 and older must have a current Florida saltwater fishing license (scalloping) from a for-hire vessel (guide, charter, party boat). You can only harvest scallops in shallow water, usually 4 to 10 feet deep. At one time, scallops were reported to only be found in selected locations with seagrass, or to collect them from a shallow-draft boat using a dip net or landing net, but these methods are not very productive. Most scallopers go by boat into shallow water, usually 4 to 10 feet deep. At one time, scallops were reported to only be found in selected locations with seagrass, or to collect them from a shallow-draft boat using a dip net or landing net, but these methods are not very productive.
SCALLOPING FLORIDA’S ADVENTURE COAST

Hernando County is in the southern range of healthy, harvestable bay scallop populations. Expansive seagrass beds, an estimated 250,000 acres, flourish in the coastal waters along this county, providing a habitat in which the scallops thrive. These plentiful seagrass beds, coupled with clear water and shallow depths, make Hernando County an ideal place to snorkel for scallops during the open season.

Populations of bay scallops, once abundant throughout Florida waters, have fluctuated throughout the years, and their range has decreased substantially. To help monitor their stocks and maintain a sustainable breeding population, the Florida Fish and Wildlife Conservation Commission (FWC) annually reviews the status of the scallop population in the waters of the eastern Gulf of Mexico.

The boost in scallop populations may be partly a result of a restoration program started by researchers at the University of South Carolina (USC), Florida Sea Grant, and FWC through their Fish and Wildlife Research Institute (FWRI) testing the feasibility of aquaculture. Scallop populations are “synchronized spawners”—when one spawns, they all do. A number of adult, hatchery-reared scallops were placed in cages on bay bottoms where healthy populations previously existed. This approach appeared to increase the chance of successfully reproducing over natural scallops that are sparsely distributed. Recent studies by the University of Florida, USF, Mote Marine Laboratory, and FWRI have shown that adult populations are increased through feeding, and FWRI has demonstrated the feasibility of harvesting these new populations.

The Florida bay scallop is a bivalve mollusk that lives in seagrass beds in relatively shallow water, usually 4 to 10 feet deep. At one time, scallops were reported from as far east as West Palm Beach and as far west as Pensacola. Today, populations can only be found in selected locations with expansive seagrass beds along Florida’s west coast—principally in St. Joseph Bay, the Steinhatchee area of the Big Bend, and near the Crystal and Homosassa Rivers. Healthy seagrass meadows are essential for maintaining scallop populations, so remember to practice responsible boating, and avoid damaging the seagrass beds.

Scallops live about one year before either dying off naturally or being eaten by humans, crabs, octopuses, or a variety of shell-crushing fish. They spawn primarily in the fall. After about a two-week period as plankton, larva develop a small shell and settle onto seagrass blades. They continue to grow while attached to the grass blades by a mass of silk-like filaments called a byssus. They later fall from the grass blades and become free swimmers. Unlike oysters and clams, scallops are active swimmers. They click their shells together, forcing expelled water to propel them rapidly. Scallop populations are simultaneous hermaphrodites, able to spawn as either males or females, and very fertile. A single scallop can produce more than one million eggs per spawn.

LEGAL REQUIREMENTS

In Florida, commercial harvest of bay scallops is banned. In general, recreational scallopers between the ages of 16 and 65 must have a current Florida saltwater fishing license to collect scallops. There are some exceptions listed in the FWC “Florida Saltwater Recreational Fishing Regulations,” which is available in boat shops, FWC offices, or on the FWC website (http://myfwc.com). All non-residents 16 and over are required to buy a license unless they are fishing (scalloping) from a for-hire vessel (guide, charter, party boat) that has a valid vessel license.

The season runs from approximately late June through late September. (Always consult the FWC website for dates of current season.) Harvesting is allowed from the west bank of the Mexico Beach Canal (in Bay County) to the Pasco-Hernando county line (near Apalachee). The bag limit is 2 gallons of whole scallops (in the shell), or 1 pint of scallop meat per person per day. In addition, no more than 10 gallons of whole scallops or 1/2 gallon of scallop meat may be possessed aboard any vessel at any time. You may harvest scallops only by hand or with a landing net or dip net. Scallopers must remain in the legal scalloping area while in possession of scallops on the water, including the point where they return to land.

See legal requirements about divers-down flags in equipment section.

COLLECTING

Scallops may be spotted on or near the bottom of seagrass beds, usually lying on their ventral shells. Often, they are easiest to find in borderline areas where the sand/mud bottom meets the edge of the grasses. Scallop populations are quite sensitive to temperature and will quickly die if they are not kept cold. Even if kept cold, scallops will usually die shortly after being placed on ice, especially if fresh water gets into their shells. They can survive on fresh water for several days, however, making it possible to clean them before returning home. If the scallops are in a mesh bag, rather than a pocket or in your wetsuit, they will not be kept cool. Even if kept cold, scallops will usually die shortly after being placed on ice, especially if fresh water gets into their shells. Placing them on ice, however, makes them easier to open, because the muscle holding the shells together will contract and make it easier to split them open.

Scallops are not classified for harvest of other shellfish species.

Equipment Needed

- Boat
- Swim fins
- Their dive flag, and snorkel

Boat

Swim fins

Their dive flag, and snorkel
Scallops are historically abundant inland of Holder Rock (GPS: N28 35.590 W82 45.580) north to the Chassahowitzka Rack (GPS: N28 39.420 W82 44.200) and within the surrounding seagrass beds. Navigate this shallow area cautiously to avoid rock outcrops.

Cleaning Your Shells

Be courteous of other scallopers and move your boat away from the scalloping areas first, then anchor. It's no fun scalloping where others are cleaning their catch.

When done cleaning scallops, do not discard shells in rivers, channels, springs, or in the water at boat ramps or marinas. Shells could fill these areas, incurring costs to remove the shells and causing negative impacts on swimmers, wildlife, and navigation. Discard scallop shells out in open Gulf waters, or store shells in a bag and discard at home.

Boat Ramp and Marina Locator Map for the Hernando County Area

This guide to recreational scalloping includes educational information about scallops and scalloping. The boat ramp and marina locator map show local water access points in the Hernando County area.

This map is not intended for navigational use. Channel markers may not be where shown. For navigation purposes, use only official nautical charts of the National Oceanic and Atmospheric Administration (NOAA). The Hernando County area is featured in NOAA nautical chart 11409. Nautical charts are normally available for sale at marine and coastal businesses throughout Florida.

Marinas / Bait and Tackle Shops

- Weeki Wachee Marina
- Blue Pelican Marina
- Sterling Marina/Hernando Beach Bait & Tackle Shop

Researchers from FWC Need Your Help

Once you're done scalloping for the day, complete an online survey at http://www.surveymonkey.com/s/bayscallops or scan the image below with a QR scanner app. Harvesters can indicate where they harvest scallops, how many they collect, and how long it takes to harvest them.

Scan this QR code to take the survey!
