

SOIL, WATER AND LAND USE:

II. Understanding Nitrogen Interactions

A Soil and Water Education Project Kit
For Ages 15-18

SOIL, WATER AND LAND USE

Understanding Nitrogen Interaction

A Soil and Water Education Project Kit

Produced jointly by the Soil and Water Science Department and the Department of 4 - H and Other Youth Programs, Florida Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida, September 1993.

COOPERATIVE EXTENSION SERVICE, UNIVERSITY OF FLORIDA, INSTITUTE OF FOOD AND AGRICULTURAL SCIENCES, John T. Wesera, director, in cooperation with the United States Department of Agriculture, publishes this information to further the purpose of the May 8 and June 30, 1914 Acts of Congress, and is authorized to provide research, educational information and other services only to individuals and institutions that function without regard to race, color, sex, handicap or national origin. Single copies of the extension publications (excluding 4 - H and youth publications) are available free to Florida residents from county extension offices. Information on bulk rates or copies for out-of-state purchasers is available from C.M. Hinton, Publications Distribution Center, UF/IFAS, Building 664, University of Florida, Gainesville, Florida 32611. Before this publication, editors should contact this address to determine availability. Printed 9/93.

SOIL, WATER AND LAND USE:

II. Understanding Nitrogen Interactions

A Soil and Water Education Project Kit

Soil, Water and Land Use: *II. Understanding Nitrogen Interactions* was written by Angela Schipper, Louis Schipper and Art Hornsby of the Soil and Water Science Department, University of Florida.

Figures and other graphics were produced by Alison Edgell.

Special thanks for technical review and assistance to Randy Brown, Paula Gale, Ed Hanlon, and Jerry Kidder, Soil and Water Science Department, University of Florida.

This project was supported by USDA-ES Smith Lever 3(d), Water Quality Initiative Program support funds.

PREFACE

Nitrogen is an essential element that all living things require for life and growth. However, nitrogen can also be a source of concern. Forms of nitrogen have been linked to potentially harmful effects on human and animal health, and the environment. The goal of *Soil, Water and Land Use: II. Understanding Nitrogen Interactions* is to increase the understanding of nitrogen, its importance to life and its implications for water quality. Once students realize the interrelationship between individual actions and environmental effects, these same students can make more responsible and informed decisions about our natural resources.

The learning activities in this project use simple, inexpensive materials. The activities lend themselves to group work and participant-led discussions and conclusions to support the given background material. These activities follow the belief that learning should be a combination of discovery, discussion and learning from those who are more knowledgeable.

Although designed for high-school students, this curriculum package could be used in lower grades. Background knowledge varies with the age and experience of the students involved. Therefore, teachers are encouraged to choose activities most appropriate to classroom needs and time limitations.

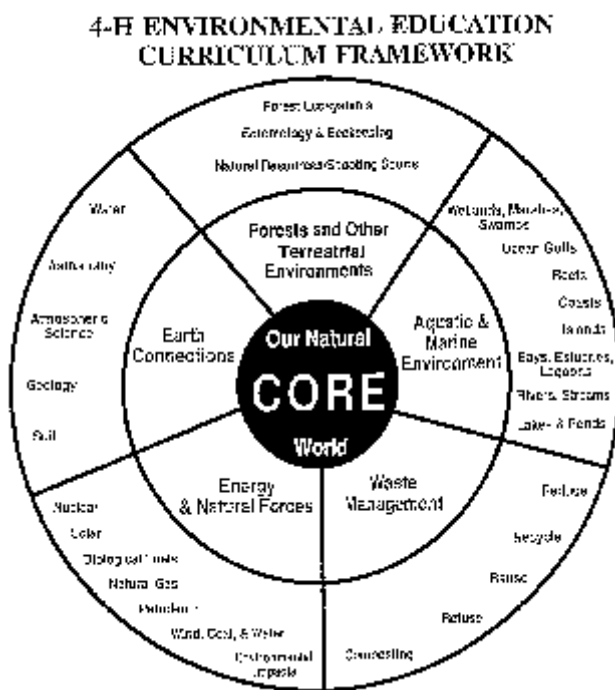

TABLE OF CONTENTS

I INTRODUCTION

Credits	ii
Preface	iii
Table of Contents	iv
Lesson Profiles	vi
Estimated Length of Activities	vii
Materials for Activities	viii
Experiential Process Techniques	xi
Experiential Learning Model	xiii

II SOIL, WATER AND LAND USE: II. Understanding Nitrogen Interaction

LESSON 1: Nitrogen - An Essential Element 1

Activities

1. Soil Microbe Colonies	3
2. Nitrification and Denitrification	7
3. Nitrogen Fixation	12
4. Native Florida Legumes	15

Background Information 20

LESSON 2: Environmental and Health Concerns 25

Activities

1. Building a TerrAqua Column	27
2. Exploring Parts-Per-Million	31
3. Testing Water For Nitrate	34

Background Information 37

LESSON 3: Nitrogen Considerations in Natural Systems 41

Activities

1. Soil Texture	43
2. Particle Size Analogy	46
3. Nonpoint Sources of Pollution	47
4. Point Sources of Pollution	50
5. Confining Layers	52

Background Information 54

TABLE OF CONTENTS

LESSON 4: Nitrogen Management	58
Activities	
1. The Effects of Overirrigation	60
2. Fertilizer Label Information	62
3. Determining the Nitrogen Content of Fertilizers	66
4. Fertilizer "Spreadsheet"	69
Background Information	73
LESSON 5: Alternative Nitrogen Sources	79
Activities	
1. Compost Construction	81
2. Determining the Amount of Nitrogen in Compost	84
Background Information	88
 III TAKE-HOME ACTIVITIES	
#1 Drinking Water Origins - Municipal	91
#2 Drinking Water Origins - Rural	92
#3 Fertilizer Label Information	93
#4 Fertilizer Scavenger Hunt	94
#5 Lawn Fertilizer Application	95
 IV SUPPLEMENTAL MATERIALS	
Table of Chemical Symbols and Names	96
Nitrogen Reactions in Soil	97
Recommendations for Nitrate-Nitrite in Public Water Supplies	99
Legumes Native or Naturalized in Florida	102
Chronology of Nodule Formation	105
Glossary	106
References	108
 V EVALUATION	
Suggestions for Evaluation and Extension	110
Pre- and Post Test	113

LESSON PROFILES

Lesson 1: Nitrogen- An Essential Element

Lesson 1 emphasizes the importance of nitrogen to human, animal and plant life. The background information explains the chemical and biological transformations of the nitrogen cycle. Activities focus upon soil microbes, nitrification, denitrification and nitrogen fixation.

Lesson 2: Environmental and Health Concerns

This lesson covers the effects of nitrate on human and animal health along with some environmental consequences of excess nitrogen in aquatic ecosystems. Activities provide a visual understanding of surface water degradation and chemical concentration (parts-per-million). Students can learn how to test water for nitrate.

Lesson 3: Nitrogen Considerations in Natural Systems

Students learn how soil properties and the makeup of aquifers affect movement of nitrate in the environment. Activities demonstrate the effect of soil texture on water infiltration, show how point- and non-point pollution sources enter into ground and surface water, and illustrate how confining layers can protect aquifers from contamination.

Lesson 4: Nitrogen Management

Students learn about a number of factors that should be considered for nitrogen management in agricultural and urban settings. Activities focus on understanding practical fertilizer matters including overirrigation, fertilizer-product labels and the nitrogen content of commercial fertilizers.

Lesson 5: Alternative Nitrogen Sources

This lesson introduces students to alternatives to commercial fertilizers through reuse of organic waste products. The background information explains the composting process and the nitrogen content of various composted materials. Students learn the composting process by developing their own compost pile.
