# Chapter 31. Okra Production in Florida

E.H. Simonne, W.M. Stall, S.M. Olson, S.E. Webb, A.J. Palmateer

## **BOTANY**

#### **Nomenclature**

Family - Malvaceae Okra - *Abelmoschus esculentus* 

### Origin

Okra is native to northeastern Africa in the general area of Ethiopia and the Sudan.

## **Related Species**

Okra is the only vegetable crop of significance in the Malvaceae family (Fig. 31-1). Cotton is the most important economic crop in this family, but there are many widely used ornamental plants.

## **VARIETIES**

Varieties of okra grown in Florida (H=hybrid):

Annie Oakley II (H) Spike (H)
Cajun Delight (H) Clemson Spineless (H)
Clemson Spineless 80

#### SEEDING AND PLANTING

Seeding and planting information for okra production in Florida is given in Table 1.

## **FERTILIZER AND LIME**

For unmulched crops with subsurface or sprinkler irrigation, broadcast all  $P_2O_5$ , micronutrients, and 25 to 50% of the N and  $K_2O$  before planting. Increased fertilizer efficiency might result from broadcasting in the bed area only or by banding at planting. Remaining N and  $K_2O$  should be banded in one or two applications during early plant growth. Soil test and fertilizer recommendations for okra grown on mineral soils are given in Table 2.

For mulched crops with subsurface irrigation, broadcast all P<sub>2</sub>O<sub>5</sub>, micronutrients, and 20 to 25% N and K<sub>2</sub>O in bed. Apply remaining N and K<sub>2</sub>O in a band in a groove 2 to 3

inches deep in bed center of twin-row crops. With sprinkler irrigation, incorporate all fertilizer in bed area. Leached N and  $K_2O$  can be replaced by liquid fertilizer injection wheel. For drip-irrigated crops apply all  $P_2O_5$ , micronutrients, and up to 20 to 25% of N and  $K_2O$  in bed. Inject remaining N and  $K_2O$  through tube according to the schedule given in Table 3.

# **PLANT TISSUE ANALYSIS**

Plant tissue analysis for okra is listed in Table 4. Testing was done during the early flowering period on the most recently matured leaf.

## IRRIGATION

Okra water requirements (see Chapter 8, *Principles and Practices of Irrigation Management for Vegetables*, Tables 4-6) are highest during rapid growth and development (100% of ETo) decreasing to 90% of ETo (see Chapter 8, *Principles and Practices of Irrigation Management for Vegetables*, Table 3) during the final growth period. Root systems may be extensive on some typical deep sandy soils, thus allowing less frequent irrigation applications.

**Table 1.** Seeding and planting information for okra in Florida.

Planting dates								
North Florida Mar - Jun								
Central Florida	Feb - Aug							
South Florida	Jan - Mar							
	Aug - Oct							
Seeding information								
Distance between rows (in) 36 - 60								
Distance between plants (in)	4 - 10							
Seeding depth (in)	0.5 - 1.0							
Seed per acre (lb)	6 - 8 <sup>1</sup>							
Days to first harvest from seed	60 - 70							
Plant population <sup>2</sup> (acre) 43,560								
<sup>1</sup> Assuming 80% germination.								
<sup>2</sup> Population based on closest between and within row spacing.								

## **WEED MANAGEMENT**

# **INSECT MANAGEMENT**

Herbicide labeled for weed control in okra are listed in Table 5.

Table 7 outlines the insecticides approved for use on insects attacking okra.

## **DISEASE MANAGEMENT**

The chemicals approved for disease management in okra are listed in Table 6.

Table 2. Soil test and fertilizer recommendations for okra grown on 6-foot bed in twin-rows on mineral soils.1

Target pH	N Ib/A	VL	L	M	Н	VH	VL	L	M	Н	VH
				P <sub>2</sub> O <sub>5</sub>					K <sub>2</sub> 0		
						(lb/A/crop	season)		_		
6.5	120	150	120	100	0	0	150	120	100	0	0
<sup>1</sup> See Chapter	2 section on suppl	emental ferti	lizer applic	cation and	best ma	nagement pra	ctices, pg 1	1.	·		

**Table 3.** Fertilization recommendations for okra grown in Florida on sandy soils testing very low in Mehlich-1 potassium (K<sub>2</sub>O)

		Re	commende	ed-Bas	e fer	tilizatio	$Recommended-Supplemental\ fertilization^z$			
Production	Markens	Total	Preplant <sup>y</sup>	Week	s afte		planting <sup>w</sup>	_	Measured "low" plant nutrient	Extended harvest
system	Nutrient	(IDS/A)	(lbs/A)	1-2	3-4	5-12	13	rain <sup>r,s</sup>	content <sup>u.r</sup>	season <sup>u.s</sup>
Drip irrigation, raised beds, and polyethylene	N	120	0-40	1.0	1.5	2.0	1.5	n/a	1.5 to 2 lbs/A/day for 7 days <sup>t</sup>	1.5 to 2 lbs/A/day <sup>p</sup>
mulch (on deep sands or on soils with shallow Impermeable layer)	K <sub>2</sub> 0	150	0-50	1.0	1.5	2.0	1.5	n/a	1.5 to 2 lbs/A/day for 7 days <sup>t</sup>	1.5 to 2 lbs/A/day <sup>p</sup>
Seepage irrigation, raised beds, and polyethylene	N	120	120 <sup>v</sup>	0	0	0	0	30 lbs/A <sup>q</sup>	30 lbs/A <sup>t</sup>	30 lbs/A <sup>p</sup>
mulch (on soils with shallow impermeable layer	K <sub>2</sub> 0 r)	150	150 <sup>v</sup>	0	0	0	0	20 lbs/A <sup>q</sup>	20 lbs/A <sup>t</sup>	20 lbs/A <sup>p</sup>

 $<sup>^{2}</sup>$  A=7,260 linear bed feet per acre (6-ft bed spacing); for soils testing "very low" in Mehlich 1 potassium (K<sub>2</sub>O) Seeds and transplants may benefit from applications of a starter solution at a rate no greater than 10 to 15 lbs/acre for N and P<sub>2</sub>O<sub>5</sub>, and applied through the plant hole or near the seeds.

**Table 4.** Plant tissue analysis at early flowering for okra. Dry wt. basis.

	N	Р	К	Ca	Mg	S	Fe	Mn	Zn	R	Cu
Status		•	Per	cent	····y		10		per milli	on	Ju
Deficient	<3.5	0.3	2.0	0.5	0.25	0.3	50	30	30	25	5
Adequate range	3.5-5.0	0.3-0.6	2.0-3.0	0.5-0.8	0.25-0.50	0.3-0.8	50-100	30-100	30-50	25-50	5-10
High	>5.0	0.6	3.0	0.8	0.50	0.8	100	100	50	50	10

y Applied using the modified broadcast method (fertilizer is broadcast where the beds will be formed only, and not over the entire field).Preplant fertilizer cannot be applied to double/triple crops because of the plastic mulch; hence, in these cases, all the fertilizer has to be injected.

 $<sup>^{\</sup>times}$  This fertigation schedule is applicable when no N and K<sub>2</sub>O are applied preplant. Reduce schedule proportionally to the amount of N and K<sub>2</sub>O applied preplant. Fertilizer injections may be done daily or weekly. Inject fertilizer at the end of the irrigation event and allow enough time for proper flushing afterwards.

For standard 13 week-long, transplanted okra crop.

<sup>&</sup>lt;sup>v</sup> Some of the fertilizer may be applied with a fertilizer wheel though the plastic mulch during the okra crop when only part of the recommended base rate is applied preplant. Rate may be reduced when a controlled-release fertilizer source is used.

<sup>&</sup>lt;sup>u</sup> Plant nutritional status may be determined with tissue analysis or fresh petiole-sap testing, or any other calibrated method. The "low" diagnosis needs to be based on UF/IFAS interpretative thresholds.

<sup>&</sup>lt;sup>t</sup> Plant nutritional status must be diagnosed every week to repeat supplemental fertilizer application.

s Supplemental fertilizer applications are allowed when irrigation is scheduled following a recommended method (see chapter 8 on irrigation scheduling in Florida). Supplemental fertilizations is to be applied in addition to base fertilization when appropriate. Supplemental fertilization is not to be applied "in advance" with the preplant fertilizer.

<sup>&</sup>lt;sup>r</sup> A leaching rain is defined as a rainfall amount of 3 inches in 3 days or 4 inches in 7 days.

<sup>&</sup>lt;sup>q</sup> Supplemental amount for each leaching rain

Plant nutritional status must be diagnosed after each harvest before repeating supplemental fertilizer application.

Table 5. Chemical weed controls: okra.

		Time of	Rate (lbs	s. Al./Acre)						
Herbicide	Labeled crops	application to crop	Mineral	Muck						
Carfentrazone (Aim)	Okra	Preplant Directed-hooded Row-middles	0.031	0.031						
down of emerged broadleaf v	Remarks: Aim may be applied as a preplant burndown treatment and/or as a post-directed hooded application to row middles for the burndown of emerged broadleaf weeds. May be tank mixed with other registered herbicides. may be applied at up to 2 oz (0.031 lb ai). Use a quality spray adjuvant such as crop oil concentrate (coc) or non-ionic surfactant at recommended rates.									
Glyphosate (Roundup) Touchdown, Durango Glyphomax	Okra	Prior to crop emergence or pretransplanting	0.5 - 1.0	0.5 - 1.0						
Remarks: Apply as directed	for "Cropping Systems" under	conditions described on label. Does not pro-	vide residual weed	control.						
Pelargonic Acid (Scythe)	Okra	Preplant Preemergence Directed-Shielded	3-10% v/v	3-10% v/v						
	The state of the s	d herbicide. There is no residual activity. Ma Consult label for rates and other information	•	ith glyphosate.						
Trifluralin (Several brands)	Okra	Preplant incorporated	0.5 - 0.75							
		s. Incorporate 4 inches or less within 8 hour utions of planting non-registered crops with		la are erratic on						

 Table 6. Disease management for okra.

Chemical (a.i.)	FRAC Group <sup>1</sup>	Maximum F Application		Min. Days to Harvest	Pertinent Diseases or Pathogens	Remarks <sup>2</sup>
Amistar 80DF (Azoxystrobin)	11	5 oz or 0.25 oz/1000 row ft	20 oz	0	Anthracnose Powdery mildew	Do not exceed 1 sequential and 4 total applications of Amistar or other Qol fungicides. See label for soil applications.
Apron XL LS (Mefenoxam)	4	0.16-0.64 fl. oz./100 lbs. of seed			Pythium damping off	Apply as a seed treatment.
Armicarb 100 (Potassium Bicarbonate)		2.5-5.0 lbs./100 gal water			Various foliar diseases	Do not exceed 5.0 lbs Armicarb per 100 gal per application
Fosphite (Potassium Phosphite)		3 qt	18 qt		Pythium, Rhizoctonia, Fusarium	Do not exceed 6 applications per crop. Caution should be used when applying in a management program including copper fungicides. Seee label for foliar, root dip and irrigation application details.

### Chapter 31: Okra Production in Florida

Table 6. Continued.

Chemical (a.i.)	FRAC Group <sup>1</sup>	Maximum Application		Min. Days to Harvest	Pertinent Diseases or Pathogens	Remarks <sup>2</sup>
Heritage (Azoxystrobin)	11	3.2-8.0 oz.	64 oz	0	Powdery mildew Anthracnose	Do not exceed 2 sequential and 4 total applications of Heritage or other Qol fungicides. See label for soil applications.
Kocide 2000 (Copper hydroxide)	M1	1.5-3 lbs.			Anthracnose Bacterial leaf spots Pod spots Powdery mildew	Begin treatment when disease threatens and repeat every 5-10 days as needed. Use higher rates and shorter spray intervals when conditions favor disease.
Quadris Flowable (Azoxystrobin)	11	15.4 fl oz or 0.8 fl oz/1000 row ft	2.88 qt	0	Various (see label)	Do not exceed 1 sequential and 4 total applications of Quadris or other Qol fungicides. See label for soil applications.
Serenade Max (Bacillus subtilis QST 713)	11	3 lb		0	Pink rot (Sclerotinia)	Begin application approx. 8 wks prior to harvest and repeat on 14 day interval. Direct spray at base of plants and surrounding soil surface.
Sulfur (various brands)					Powdery mildew	Do not apply during periods of warm weather. Do not apply within 2 weeks of an oil spray.
Topaz (Potassium Phosphite)		1-3 qt/100 gal water	18 qt		Various diseases	Do not exceed 6 applications per a crop cycle or year
Trilogy (Neem oil)		0.5%-2.0% in 25-100 gal of water			Various foliar diseases	Do not exceed 2 gal Trilogy per acre, per application

<sup>1</sup> Fungicide group (FRAC Code): Numbers (1-37) and letters (M, U, P) are used to distinguish the fungicide mode of action groups. All fungicides within the same group (with same number or letter) indicate same active ingredient or similar mode of action. This information must be considered for the fungicide resistance management decisions. M = Multi site inhibitors, fungicide resistance risk is low; U = Recent molecules with unknown mode of action; P = host plant defense inducers. Source: http://www.frac.info/ (FRAC = Fungicide Resistance Action Committee). Be sure to read a current product label before applying any chemicals.

<sup>&</sup>lt;sup>2</sup> Information provided in this table applies only to Florida. Be sure to read a current product label before applying any chemical. The use of brand names and any mention or listing of commercial products or services in the publication does not imply endorsement by the University of Florida Cooperative Extension Service nor discrimination against similar products or services not mentioned.

Table 7. Selected insecticides approved for use on insects attacking okra.

Trade Name	Rate	REI (hours)	Days to Harvest		MOA Code <sup>1</sup>	Notes
(Common Name)	(product/acre)	(hours)	пагуеѕі	IIISECIS	Coue	Notes
Acramite-50WS (bifenazate)	0.75-1.0 lb	12	3	twospotted spider mite	25	One application per season.
Admire 2F (imidacloprid)	16-32 fl oz	12	21	aphids, flea beetles, leaf- hoppers, foliage feeding thrips, whiteflies	4A	No more than 32 oz per acre.
Admire Pro	7-14 fl oz					
Admire 2F (imidacloprid)	0.1 fl oz/1000 plants	12	21	aphids, whiteflies	4A	<b>Planthouse</b> - 1 application to transplants. See label.
Admire Pro	0.44 fl oz/10,00 plants	0				
Asana XL (0.66 EC) (esfenvalerate)	5.8-9.6 fl oz	12	1	cabbage looper, corn earworm, southern army- worm	3	Florida only.
<b>Aza-Direct</b> (azadirachtin)	1-2 pts, up to 3.5 pts, if needed	4	0	aphids, beetles, caterpillars, leafhoppers, leafminers, mites, stink bugs, thrips, weevils, whiteflies	26	Antifeedant, repellant, insect growth regulator. OMRI-listed <sup>2</sup> .
Azatin XL (azadirachtin)	5-21 fl oz	4	0	aphids, beetles, caterpillars, leafhoppers, leafminers, mites, stink bugs, thrips, weevils, whiteflies	26	Antifeedant, repellant, insect growth regulator.
<b>Biobit HP</b> (Bacillus thuringiensis subspecies kurstaki)	0.5-2.0 lb	4	0	caterpillars (will not control large armyworms)	11B2	Treat when larvae are young. Good coverage is essential. Can be used in the greenhouse. OMRI-listed <sup>2</sup> .
BotaniGard 22 WP, ES (Beauveria bassiana)	<b>WP:</b> 0.5-2.0 lb/100 gal <b>ES:</b> 0.5-2 qt/100 ga	4 I	0	aphids, thrips, whiteflies		May be used in greenhouses. Contact dealer for recommen- dations if an adjuvant must be used. Not compatible in tank mix with fungicides.
Crymax WDG (Bacillus thuringiensis subspecies kurstaki)	0.5-2.0 lb	4	0	caterpillars	11B2	Use high rate for armyworms. Treat when larvae are young.
<b>Deliver</b> (Bacillus thuringiensis subspecies kurstaki)	0.25-1.5 lb	4	0	caterpillars	11B2	Use higher rates for army- worms. OMRI-listed <sup>2</sup> .
Entrust (spinosad)	0.5-2.5 oz	4	1	armyworms, flower thrips, leafminers, loopers, other caterpillars, Thrips palmi, tomato fruitworm	, 5	Do not apply more than 9 oz per acre per crop. OMRI-listed <sup>2</sup> .
Esteem Ant Bait (pyriproxyfen)	1.5-2.0 lb	12	1	red imported fire ant	7D	Apply when ants are actively foraging.
Extinguish ((S)-methoprene)	1.0-1.5 lb	4	0	fire ants	7A	Slow-acting IGR (insect growth regulator). Best applied early spring and fall where crop will be grown. Colonies will be reduced after three weeks and eliminated after 8 to 10 weeks. May be applied by ground equipment or aerially.

Table 7. Continued.

Trade Name (Common Name)	Rate (product/acre)	REI (hours)	Days to Harvest	nsects	MOA Code <sup>1</sup>	Notes
Intrepid 2F (methoxyfenozide)	4-16 fl oz	4	1	beet armyworm, cabbage looper, fall armyworm, hornworms, southern armyworm, tomato fruit- worm, true armyworm, yellowstriped armyworm	18	Do not apply more than 64 fl oz per acre per season.
Javelin WG (Bacillus thuringiensis subspecies kurstaki)	0.12-1.50 lb	4	1	most caterpillars, but not Spodoptera species (armyworms)	11B2	Treat when larvae are young. Thorough coverage is essential OMRI-listed <sup>2</sup> .
JMS Stylet-Oil (oil, insecticidal)	3-6 qts/100 gal	4	0	leafminers, mites, white- flies		See label for tank mix cautions. Organic Stylet-Oil is OMRI- listed <sup>2</sup> .
Knack IGR (pyriproxyfen)	8-10 fl oz	12	14	whiteflies (immatures)	7D	Do not make more than 2 applications per season.
Lepinox WDG (Bacillus thuringiensis subspecies kurstaki)	1.0-2.0 lb	12	0	for most caterpillars, including beet armyworm (see label)	11B2	Treat when larvae are small. Thorough coverage is essential.
Malathion 8F (malathion)	1.5 pt	12	1	aphids	1B	
Neemix 4.5 (azadirachtin)	4-16 fl oz	12	0	aphids, armyworms, leaf- hoppers, leafminers, loop- ers, whiteflies	26	IGR and feeding repellant. OMRI-listed <sup>2</sup> .
Provado 1.6F (imidacloprid)	3.8 oz	12	0	aphids, leafhoppers, whiteflies	4A	Do not apply more than 18.8 oz per acre per year.
Pyrellin EC (pyrethrin + rotenone)	1-2 pt	12	12 hours	aphids, leafhoppers, leafminers, loopers, lygus bugs, plant bugs, mites, thrips, whiteflies	3, 21	
Sevin XLR, 4F, 80S (carbaryl)	XLR, 4E: 1-1.5 qt 80S: 1.25-1.88 lb	12	3	corn earworm, stink bugs	1A	Do not apply more than a total of 6 qt or 7.5 lb per acre per season.
SpinTor (spinosad)	1.5-8.0 fl oz	4	1	armyworms, flower thrips hornworms, leafminers, Liriomyza spp., Thrips palmi, tomato fruitworm	, 5	For resistance management, do not use more than 3 times in any 21-day period, then rotate to a different class of products or no insecticide for 21 days.
*Telone C-35 (dichloro- propene + chloropicrin)	See label	5 days - See label	preplant	symphylans, wireworms		See supplemental label for use restrictions in south and central Florida.
*Telone II (dichloropropene)	See label					
Trilogy (extract of neem oil)	0.5-2.0% V/V	4	0	aphids, mites, suppressio of thrips and whiteflies	n 26	Apply morning or evening to reduce potential for leaf burn. Toxic to bees exposed to direct treatment.  OMRI-listed <sup>2</sup> .

The pesticide information presented in this table was current with federal and state regulations at the time of revision. The user is responsible for determining the intended use is consistent with the label of the product being used. Use pesticides safely. Read and follow label instructions.
