

CANKER MANAGEMENT

- Decontamination
- Tree removal
- Defoliation
- Windbreaks
- Copper sprays
- Leafminer control

CONTACTS

Citrus Research and Education Center

Jamie Yates
Canker and Greening Extension Education
863-956-1151 ext. 1302

Jim Graham, Ph.D.
Soil Microbiologist
863-956-1151 ext. 1297

Megan Dewdney, Ph.D.
Plant Pathologist
863-956-1151 ext. 1267

Lukasz Stelinski, Ph.D.
Entomologist
863-956-1151 ext. 1281

Tim Spann, Ph.D.
Horticulturist
863-956-1151 ext. 1417

Citrus Extension Agents

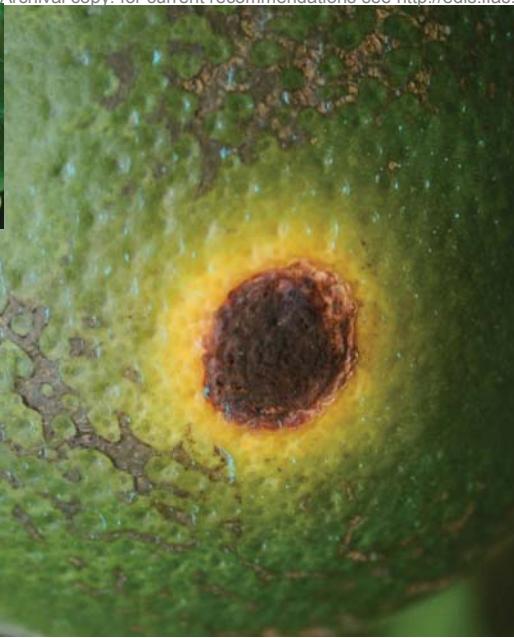

Ryan Atwood
Marion, Lake, Volusia,
Orange, Seminole, Brevard
and Osceola counties
352-343-4101

Gary England
Citrus, Hernando, Sumter
and Pasco counties

CANKER HISTORY

1910

First introduction into Florida

1933

First introduction of canker eradicated

1986

Second introduction into Florida

1994

Second introduction of canker eradicated

1995

Third introduction into Florida

2000

Statewide mandatory eradication 1,900-foot rule implemented

Quarantine areas were established when canker was detected
Mandatory statewide decontamination procedures became required

2002

Removal of infected and exposed trees were delayed due to lawsuits

2004-2005

Hurricanes increased the spread of canker across the state

2005

First nursery infected with canker was found

2006

Mandatory eradication ended

2007

More than 20 Florida counties infected with canker

Removal of infected trees is now voluntary

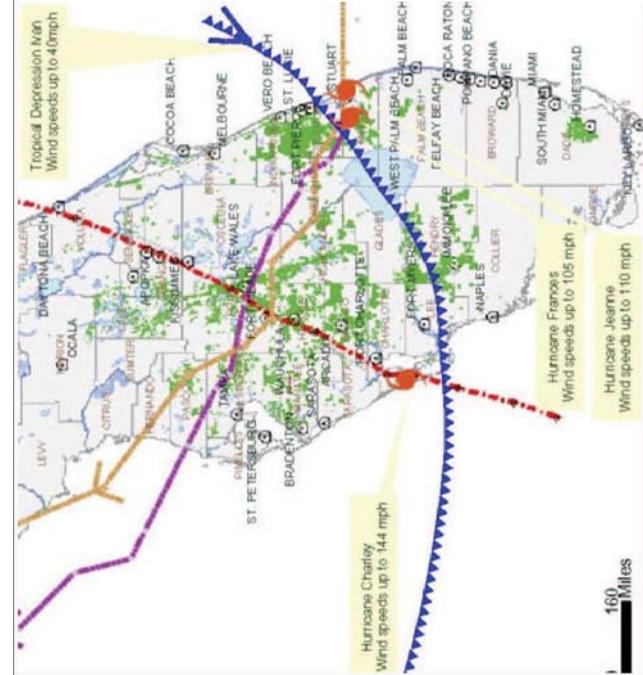

Decontamination procedures are required statewide to prevent the spread of citrus canker

CANKER SPREAD

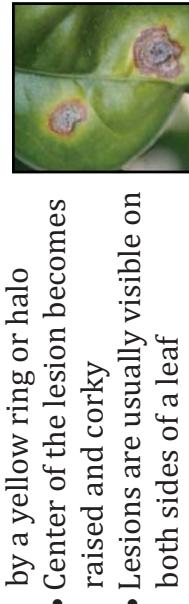

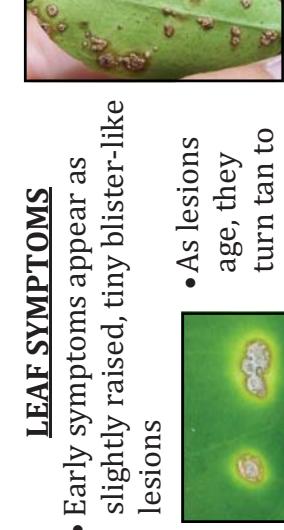

- Wind-driven rain
- Storm events
- Flooding
- Citrus leafminer
- Birds and other animals
- Overhead irrigation
- Human movement of infected plant material
- Human and equipment movement within groves

Canker does *not* harm humans

CITRUS CANKER IS HIGHLY CONTAGIOUS!

Hurricanes that crossed the state of Florida in 2004 and 2005 increased the spread of canker statewide

- As lesions age, they turn tan to brown, and a water-soaked margin appears surrounded by a yellow ring or halo
- Center of the lesion becomes raised and corky
- Lesions are usually visible on both sides of a leaf

LEAF SYMPTOMS

FRUIT AND STEM SYMPTOMS

- Dark brown or black raised, corky lesions surrounded by an oily or water-soaked margin
- Mature lesions appear scabby or corky
