

# Facts About Vitamins<sup>1</sup>

R. Elaine Turner and Wendy J. Dahl<sup>2</sup>

## What are vitamins?

Vitamins are chemical compounds that the body uses in a variety of ways. We need to get vitamins from our diet because we can't make them in the body. There are 13 different vitamins that have been identified as important nutrients for humans.

## What are the different types of vitamins?

Vitamins are grouped as **water-soluble** and **fat-soluble**. The water-soluble vitamins include vitamin C and the B vitamins. The fat-soluble vitamins are vitamins A, D, E, and K. Water-soluble and fat-soluble vitamins differ in how easily they dissolve in water. This mainly affects how the different types of vitamins are absorbed and carried in the body. Most vitamins have both a chemical name and a letter name.

### Water-Soluble Vitamins

Ascorbic Acid (Vitamin C)  
 Thiamin (Vitamin B<sub>1</sub>)  
 Riboflavin (Vitamin B<sub>2</sub>)  
 Niacin (Vitamin B<sub>3</sub>)  
 Pyridoxine (Vitamin B<sub>6</sub>)  
 Cobalamin (Vitamin B<sub>12</sub>)  
 Folate  
 Pantothenic Acid  
 Biotin

Figure 1. Many of us may think of this iconic image when we think about vitamins, but a healthy diet really starts with healthy food choices. Credits: Photo by Lisa Brewster. CC BY-SA 2.0. <http://flic.kr/p/5CAsdv>

### Fat-Soluble Vitamins

Retinol (Vitamin A)  
 Calciferol (Vitamin D)  
 Tocopherol (Vitamin E)  
 Phyllo- and Mena- quinones (Vitamin K)

## What do vitamins do in the body?

Vitamins work in many reactions that regulate body processes. The following list gives examples of some vitamins and their specific functions:

- Vitamin C, vitamin E, and beta-carotene (a form of vitamin A) act as antioxidants. They prevent cells from being damaged by oxygen.

1. This document is FCS8808, one of a series of the Department of Family, Youth and Community Sciences, Florida Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida. First published: December 2006. Revised: April 2012. Visit the EDIS website at <http://edis.ifas.ufl.edu>.

2. R. Elaine Turner, PhD, RD, associate dean and professor, College of Agricultural and Life Sciences, and Wendy J. Dahl, PhD, assistant professor, Food Science and Human Nutrition Department, Institute of Food and Agricultural Sciences, University of Florida, Gainesville, FL 32611.

- Vitamin A is important for normal vision and immune function.
- Vitamin D is needed for bone health.
- Vitamin K is important for blood clotting.

## Where are vitamins found in foods?

All of the food groups have foods rich in vitamins. Milk naturally contains riboflavin and is fortified with vitamins A and D. Enriched grain products contain added thiamin, riboflavin, niacin, and folic acid.

Vitamin C is found in fruits and vegetables, while only animal foods naturally contain vitamin B<sub>12</sub>. Some high-fat foods, such as vegetable oil, salad dressing, nuts, seeds, and mayonnaise, are rich in vitamin E.

It's important to eat a variety of foods from each of the food groups to get all the vitamins you need. For information about nutrients found in the various food groups, see <http://ChooseMyPlate.gov> or contact your local Extension office.

## Do fresh foods have the most vitamins?

Fresh fruits and vegetables are good sources of many vitamins. The fresher they are, the more vitamins they contain. Farmers' markets are great sources of fresh fruits and vegetables in season.

Canned and frozen fruits and vegetables can be just as nutritious as fresh produce. When produce is canned or frozen, it is processed quickly and then sealed in a package to reduce further loss of vitamins.

## How can I get the most out of the foods I eat?

Vitamins, especially water-soluble vitamins, can be lost from foods when exposed to heat, light, and/or air. Cooking foods, especially if they are chopped up and cooked for a long time in large amounts of water, reduces their vitamin content. Here are some cooking tips to help preserve the vitamin content of your foods:

- Use as little water as necessary.
- Keep the pieces of food as large as possible.
- Cook for a short period of time.
- Microwave, stir-fry, or steam vegetables.
- Use water that vegetables were cooked in to make soups or stews (use within a couple of days, or freeze).

## How much of each vitamin do I need each day?

The amount of vitamins we need is actually very small—much smaller than the amounts of carbohydrates, protein, and fats required for a healthy diet. For example, we need only a few micrograms of vitamin B<sub>12</sub> per day. To give you an idea of how little this is, a teaspoon of vitamin B<sub>12</sub> is enough to meet the daily needs of over 2 million adults!

Table 1.

| 100% Orange Juice – Calcium-Fortified<br>Nutrition Facts                                   |   |
|--|---|
| Serving Size 8 fl oz (240 ml) Servings Per Container 8                                     |   |
| Amount Per Serving   |   |
| Calories 110   | Calories from fat 0                     |
|  | % Daily Value                           |
| <b>Total Fat</b> 0g  | 0%                                      |
| <b>Sodium</b> 0mg  | 0%                                      |
| <b>Potassium</b> 450 mg  | 13%                                     |
| <b>Total Carbohydrate</b> 26g  |   |
| Sugars 22g   |   |
| <b>Protein</b> 2g  |   |
| Vitamin C 120%   | Calcium 35%                             |
| Thiamin 10% Niacin 4%  | Riboflavin 6% Vitamin B <sub>6</sub> 5% |
| Folate 15%   | Magnesium 6%                            |
| Not a significant source of saturated fat, cholesterol, dietary fiber, vitamin A, or iron. |   |
| *Percent Daily Values are based on a 2,000 calorie diet.                                   |   |

The % Daily Value (%DV) for a vitamin on a food label shows you what percent of a typical healthy adult's daily need for that vitamin is provided by a serving of the food. For example, an 8-ounce glass of orange juice provides 120% of the Daily Value for vitamin C, and 15% of the Daily Value for folate.

## Should I take supplements to get the vitamins I need?

While it's possible to get all the vitamins you need by making healthy food choices, people sometimes need supplements. For example,

- All women of childbearing age should get 400 micrograms of folic acid each day from fortified foods or a supplement, in addition to folate from a varied diet.
- Older adults may have difficulty absorbing vitamin B<sub>12</sub> from foods. They also need more vitamin D as they age. Most of their B<sub>12</sub> intake should come from fortified foods or supplements.
- Pregnant women should ask their physician about the supplements that are right for them.

## Can large amounts of vitamins be harmful?

With vitamins, as with many things in life, more is **not** necessarily better. Some vitamins can be toxic in large doses (see Table 2 below). Side effects range from stomach upset or diarrhea to liver damage or birth defects.

Table 2.

| <b>Maximum Suggested Intake:<br/>Do NOT consume more than these amounts!</b> |                           |
|--|---------------------------|
| Niacin   | 35 mg (from supplements)  |
| Vitamin B <sub>6</sub>   | 100 mg (from supplements) |
| Folate   | 1,000 mcg (as folic acid) |
| Vitamin C  | 2,000 mg                  |
| Vitamin A  | 3,000 mcg (10,000 IU)     |
| Vitamin D  | 50 mcg (2,000 IU)         |
| Vitamin E  | 1,000 mg (1,500 IU)       |
| mg = milligrams<br>mcg = micrograms IU = International Units                 |                           |

Excessive intakes of vitamins usually come from high-dose supplements. That's why most people should choose supplements that contain no more than 100 to 150% of the Daily Value for each vitamin.

Table 3. Typical label for multivitamin

| <b>Supplement Facts<br/>Serving Size 1 Tablet</b> |            |      |
|---|------------|------|
| <b>Each Tablet Contains</b>                       | <b>%DV</b> |      |
| Vitamin A<br>(20% as Beta Carotene)               | 5,000 IU   | 100% |
| Vitamin C   | 60 mg      | 100% |
| Vitamin D   | 400 IU     | 100% |
| Vitamin E   | 30 IU      | 100% |
| Vitamin K   | 25 mg      | 31%  |
| Thiamin   | 1.5 mg     | 100% |
| Riboflavin  | 1.7 mg     | 100% |
| Niacin  | 20 mg      | 100% |
| Vitamin B <sub>6</sub>                            | 2 mg       | 100% |
| Folic Acid  | 400 mcg    | 100% |
| Vitamin B <sub>12</sub>                           | 6 mcg      | 100% |
| Biotin  | 30 mcg     | 10%  |
| Pantothenic Acid                                  | 10 mcg     | 100% |

## Where can I get more information?

The Family and Consumer Sciences (FCS) agent at your county Extension office may have written information and nutrition classes for you to attend. Also, a registered dietitian (RD) can provide reliable information to you.

Reliable nutrition information may be found on the Internet at the following sites:

- <http://fyfcs.ifas.ufl.edu>
- <http://solutionsforyourlife.ufl.edu>
- <http://choosemyplate.gov>
- <http://www.nal.usda.gov/fnic>
- <http://www.nutrition.gov>
