

Common Weed Hosts of Insect-Transmitted Viruses of Florida Vegetable Crops¹

Gaurav Goyal, Harsimran K. Gill, and Robert McSorley²

Weed growth can severely decrease the commercial, recreational, and aesthetic values of crops, landscapes, and waterways. More information on weeds can be found in Hall et al. (2009i). Other than affecting crop production by reducing the amount of nutrients available to the main crop, weeds can also influence crop production by acting as reservoirs of various viruses that are transmitted by insects. Several insects transmit different viruses in different crops, but aphids and whiteflies are among the most important virus vectors (carriers of viruses) on vegetable crops in Florida. The insect vectors feed on various parts of weeds that are infected by a virus and acquire the virus in the process. They then can feed on uninfected agricultural crops and transmit the virus to them. Insects are often attracted to weeds and survive on them because weeds can provide food for insects when preferred food is scarce, or weeds can provide shelter from adverse conditions such as bad weather or pesticide applications. Several weeds have been reported as virus hosts by Kucharek and Purcifull (2001). The current publication includes additional and updated material since that time and provides links to further information on specific viruses that affect vegetable crops. Certain volunteer vegetable plants can also act as sources of viruses that endanger the main crop.

Information on weed hosts of various vegetable viruses can be found in Table 1. Virus names are often based on the name of the vegetable they attack; however, certain viruses affect many different vegetables, e.g., *Cucumber mosaic* virus attacks bell pepper, tomato, spinach, cantaloupe, cucumber, pumpkin, squash, celery, and watercress. References to appropriate publications are provided for easy cross-reference and more details about the virus under consideration. Common viruses with their family and genus names are provided in Table 2. Information is also provided for each vegetable that was reported infected by the virus, and on the insect vectors that transmit the virus. Some viruses, such as *Tomato mosaic virus*, are not transmitted by vectors. Others, such as *Bean common mosaic virus*, can be transmitted by vectors or through seed. Detailed information about viruses and their transmission has been summarized by Adams and Antoniw (2011). Common and scientific names of weeds that act as virus sources are listed in Table 3.

Removal of weeds that act as virus sources may be helpful in reducing the initial infestation by a virus of the main crop in the same field as well as other fields that are near the weeds. Removal of volunteer plants from field borders may also help in management of viral diseases (Momol and Pernezny 2006).

While a number of weeds in and around fields of different crops can act as virus sources for the main vegetable crop, some of them are particularly important because of their ability to host a number of different viruses. A few of these are balsam apple (Figure 1), creeping cucumber (Figure 2), groundcherry (Figure 3), dayflower (Figure 4), American

black nightshade (Figure 5), hairy indigo (Figure 6), and citron (Figure 7). The American black nightshade is common in Florida (MacRae 2010), and it is possible that some of the references to "nightshade" in Table 1 or to "black nightshade" may actually refer to this plant. Recognition of these common virus host plants is important because they may be reservoirs for viruses, allowing them to survive during the off-season when the main vegetable crops are not grown.

Common chickweed	Tomato spotted wilt virus	Zitter and Daughtrey (1989), Groves et al. (2002)		
Common groundsel	Lettuce mosaic virus	Koike and Davis (2009)		
Common plantain	Tobacco mosaic virus	Zitter and Daughtrey (1989)		
Common sowthistle	Tobacco etch virus	Sikora (1998)		
Creeping cucumber	Papaya ringspot virus type W	Kucharek and Purcifull (2001), Mossler and Nesheim (2011), Larson et al. (2011)		
Creeping cucumber	Squash vein yellowing virus	Baker et al. (2008), Adkins et al. (2008), Adkins et al. (2010)		
Creeping cucumber	Zucchini yellow mosaic virus	Kucharek and Purcifull (2001), Mossler and Nesheim (2011), Mossler (2010)		
Curlytop knotweed	Tobacco rattle virus	Dikova (1946)		
Dayflower	Cucumber mosaic virus	Momol and Pernezny (2006), Raid and Kucharek (2006a), Raid and Kucharek (2006b), Ferreira and Boley (1992)		
Dogfennel	Tomato spotted wilt virus	Groves et al. (2002)		
Field bindweed	Cucumber mosaic virus	Rodríguez-Alvarado et al. (2002)		
Field bindweed	Pepper mottle virus	Rodríguez-Alvarado et al. (2002)		
Field bindweed	Tobacco rattle virus	Dikova (1946)		
Florida beggarweed	Watermelon mosaic virus	Larson et al. (2011)		
Groundcherry	Cucumber mosaic virus	Raid and Kucharek (2006b), Ferreira and Boley (1992)		
Groundcherry	Pepper mottle virus	Rodríguez-Alvarado et al. (2002)		
Groundcherry	Tobacco etch virus	Johnson (2011)		
Hairy bittercress	Tomato spotted wilt virus	Groves et al. (2002)		

Hairy buttercup	Tomato spotted wilt virus	Groves et al. (2002)	
Hairy indigo	Watermelon mosaic virus	Mossler and Nesheim (2011), Kucharek and Purcifull (200	
Henbit deadnettle	Lettuce mosaic virus	Koike and Davis (2009)	
Horse nettle	Cucumber mosaic virus	Raid and Kucharek (2006b), Ferreira and Boley (1992)	
Horse nettle	Tobacco mosaic virus	Zitter and Daughtrey (1989)	
Horse nettle	Tobacco etch virus	Johnson (2011)	
Indian chickweed	Tomato spotted wilt virus	Groves et al. (2002)	
Ivy gourd	Papaya ringspot virus type W	Mossler and Nesheim (2011)	
Jimson weed	Pepper mottle virus	Kucharek et al. (1996)	
Jimson weed	Potato virus Y	Kucharek et al. (1996)	
Jimson weed	Tobacco etch virus	Sikora (1998)	
Jimson weed	Tomato yellow leaf curl virus	Brown and Simone (1994)	
Johnsongrass	Tobacco rattle virus	Dikova (1946)	
Lambsquarter	Tobacco etch virus	Sikora (1998)	
Lambsquarter	Lettuce mosaic virus	Koike and Davis (2009)	
Lambsquarter	Tobacco rattle virus	Dikova (1946)	
Lambsquarter	Tomato spotted wilt virus	Zitter and Daughtrey (1989)	
Little hogweed	Tomato spotted wilt virus	Zitter and Daughtrey (1989)	
Lupine	Watermelon mosaic virus	Mossler and Nesheim (2011)	
Mallows	Tomato yellow leaf curl virus	Brown and Simone (1994)	
Marsh parsley	Western Celery mosaic virus/Celery mosaic virus	Mossler et al. (2010)	
Mexican pricklypoppy	Bidens mottle virus	Pernezny and Raid (2008)	
Milkweed	Cucumber mosaic virus	Raid and Kucharek (2006b), Ferreira and Boley (1992)	
Mock bishopweed	Western Celery mosaic virus/Celery mosaic virus	Mossler et al. (2010)	
Mustard type weeds*	Turnip mosaic virus	Momol et al. (2005), Mossler et al. (2011)	
Nasturtium	Tomato spotted wilt virus	Zitter and Daughtrey (1989)	
Nettleleaf goosefoot	Lettuce mosaic virus	Koike and Davis (2009)	
Nettleleaf goosefoot	Tomato spotted wilt virus	Zitter and Daughtrey (1989)	
Nightshade	Cucumber mosaic virus	Raid and Kucharek (2006b), Ferreira and Boley (1992)	
Nightshade	Pepper mottle virus	Rodríguez-Alvarado et al. (2002)	
Nightshade	Potato virus Y	Orsenigo and Zitter (1971), Momol and Pernezny (2006)	
Nightshade	Pseudo curly top virus	Momol and Pernezny (2006)	
Nightshade	Tomato yellows virus	Momol and Pernezny (2006)	
Nightshade	Tobacco etch virus	Momol and Pernezny (2006), Sikora (1998)	
Nightshade	Tobacco mosaic virus	Adkins and Rosskopf (2002)	
One leaf clover	Watermelon mosaic virus	Kucharek and Purcifull (2001)	
Prickly lettuce	Lettuce mosaic virus	Koike and Davis (2009)	
Prickly lettuce	Tomato spotted wilt virus	Groves et al. (2002)	
Ragweed	Cucumber mosaic virus	Raid and Kucharek (2006b), Ferreira and Boley (1992)	
Ragweed	Pseudo curly top virus	Momol and Pernezny (2006)	
Redstem stork's bill	Lettuce mosaic virus	Koike and Davis (2009)	
Rough pigweed	Tobacco rattle virus	Dikova (1946)	
Scarlet pimpernel	Lettuce mosaic virus	Koike and Davis (2009)	
Shepherd's purse	Tomato spotted wilt virus	Zitter and Daughtrey (1989)	
Showy rattlebox	Watermelon mosaic virus	Larson et al. (2011), Kucharek and Purcifull (2001)	

Sicklepod	Tobacco etch virus	Sikora (1998)	
Sowthistle	Tomato spotted wilt virus	Zitter and Daughtrey (1989)	
Sowthistle	Tomato yellow leaf curl virus	Brown and Simone (1994)	
Spiny sowthistle	Tomato spotted wilt virus	Groves et al. (2002)	
Spoonleaf purple everlasting	Tomato spotted wilt virus	Groves et al. (2002)	
Tropical soda apple	Tomato mottle virus	McGovern et al. (1994)	
Virginia pepperweed	Bidens mottle virus	Pernezny and Raid (2008)	
Wild bushbean	Bean golden mosaic virus	Bracero and Rivera (2003)	
Wild radish	Tobacco rattle virus	Dikova (1946)	
Wild radish	Tomato spotted wilt virus	Groves et al. (2002)	
* mustard type weeds – Shepherd's p	ourse (Zitter and Provvidenti 1984), Brassi	ca spp. (Jenner and Walsh 1996)	

Table 2. Common viruses, families, vegetable crop hosts, and their vectors

Virus	Family	Genus	Crop hosts	Vector
Bean common mosaic virus	Potyviridae	Potyvirus	Beans, snap beans	Aphids
Bean golden mosaic virus	Geminiviridae	Begomovirus	Beans, snap beans	Whiteflies
Bean yellow mosaic virus	Potyviridae	Potyvirus	Snap beans	Whiteflies
Bidens mottle virus	Potyviridae	Potyvirus	Endive, escarole lettuce	Green peach aphid (Myzus persicae)
Cabbage leaf curl virus	Geminiviridae	Begomovirus	Watercress	Whiteflies
Cucumber mosaic virus	Bromoviridae	Cucumovirus	Bell pepper, cantaloupe, celery, cucumber, pumpkin, spinach, squash, tomato, watercress	Aphids
Cucurbit leaf crumple virus	Geminiviridae	Begomovirus	Cantaloupe, cucumber, green beans, pumpkin, squash, watermelon, zucchini	Whiteflies
Dasheen mosaic virus	Potyviridae	Potyvirus	Malanga	Several species of aphids
Groundnut ringspot virus	Bunyaviridae	Tospovirus	Tomato	Thrips
Lettuce mosaic virus	Potyviridae	Potyvirus	Endive, escarole lettuce	Green peach aphid
Papaya ringspot virusType W	Potyviridae	Potyvirus	Cantaloupe, cucumber, pumpkin, squash, watermelon	Aphids
Pepper mottle virus	Potyviridae	Potyvirus	Bell pepper	Aphids
Potato virus Y	Potyviridae	Potyvirus	Bell pepper, potato, tomato	Aphids
Pseudo-curly top virus	Geminiviridae	Begomovirus	Tomato	Whiteflies
Squash vein yellowing virus	Potyviridae	Ipomovirus	Squash, watermelon	Whiteflies
Tobacco etch virus,	Potyviridae	Potyvirus	Bell pepper, tomato	Aphids
Tobacco mosaic virus	Virgaviridae	Tobamovirus	Bell pepper, tomato	
Tobacco rattle virus	Virgaviridae	Tobravirus	Potato	Stubby-root nematode
Tobacco streak virus	Bromoviridae	Ilarvirus	Snap beans	Thrips
Tomato chlorosis	Closteroviridae	Closterovirus	Tomato	Whiteflies
Tomato mosaic virus	Virgaviridae	Tobamovirus	Tomato	
Tomato mottle virus	Geminiviridae	Begomovirus	Tomato	Whiteflies
Tomato spotted wilt virus	Bunyaviridae	Tospovirus	Bell pepper, tomato, watermelon	Western flower thrips (Franklinella occidentalis), tobacco thrips (F. fusca)
Tomato yellow leaf curl virus	Geminiviridae	Begomovirus	Tomato	Whiteflies
Turnip mosaic virus	Potyviridae	Potyvirus	Cabbage, spinach	Aphids
Papaya ringspot virusType W	Potyviridae	Potyvirus	Squash, watermelon	Aphids
Watermelon mosaic virus	Potyviridae	Potyvirus	Cantaloupe, cucumber, pumpkin, squash, watermelon	Aphids
Western Celery mosaic virus/ Celery mosaic virus	Potyviridae	Potyvirus	Celery	Aphids
Zucchini yellow mosaic virus	Potyviridae	Potyvirus	Cantaloupe, cucumber, squash, watermelon	Aphids

Table 3. Common and scientific names of various weed hosts of viruses

Alyce clover, Alysicarpus ovalifolius (Newman et al. 2010a) American burnweed, Erechtites hieraciifolius American pokeweed, Phytolacca americana (Stevens 2009d) Balsam pear (= Balsam apple), Momordica charantia (Hall et al. 2009a) Beggarticks, Bidens spp. (Hall et al. 2009h) Big chickweed, Cerastium fontanum subsp. Vulgare Bull thistle, Cirsium vulgare (Sellers and Ferrell 2010) Burr clover, Medicago polymorpha Butterweed, Packera glabella Canadian horseweed, Conyza (=Erigeron) Canadensis Canadian toadflax, Linaria Canadensis Carolina cranesbill, Geranium carolinianum Carolina desertchicory, Pyrrhopappus carolinianus Cheeseweed mallow, Malva parviflora Chicory, Cichorium intybus (Stephens 2009a) Citron, Citrullus lanatus (Thunb.) var.citroides (Bailey) Mansf. (Stephens 2009b) Clasping Venus' looking-glass, Triodanis perfoliata Cocklebur, Xanthium strumarium Common chickweed, Stellaria media Common groundsel, Senecio vulgaris Common plantain, *Plantago major* Common sowthistle, Sonchus oleraceus Creeping cucumber, Melothria pendula Curlytop knotweed, Polygonum lapathifolium Dayflower, Commelina spp. (Ferrell et al. 2009) Dogfennel, Eupatorium capillifolium Field bindweed, Convolvulus arvensis Florida beggarweed, Desmodium tortuosum Groundcherry, Physalis spp. (Hall et al. 2009b) Hairy bittercress, Cardamine hirsute Hairy buttercup, Ranunculus sardous Hairy indigo, Indigofera hirsuta (Newman et al. 2010b) Henbit deadnettle, Lamium amplexicaule Horse nettle, Solanum carolinense (Hall et al. 2009c) Indian chickweed, Mollugo verticillata lvy gourd, Coccinia grandis Jimson weed, Datura stramonium (Hall et al. 2009d) Johnsongrass, Sorghum halepense Lambsquarter (Common lambsquarters), Chenopodium album (Hall et al. 2009e) Little hogweed, Portulaca oleracea (MacRae 2010) Lupine, Lupinus spp. Mallows, Malva sp. Marsh parsley (= wild cherry), Cyclospermum leptophyllum (=Apium leptophyllum) Mexican pricklypoppy, Argemone mexicana (Sellers 2011) Milkweed, Asclepias curassavica (Gilman 2011) Mock bishopweed, Ptilimnium capillaceum

Nasturtium, <i>Tropaeolum majus</i> (Stephens 2009c)
Nettleleaf goosefoot, Chenopodium murale
Nightshade, Solanum spp. (MacRae 2010)
One leaf clover (White moneywort), Alysicarpus vaginalis
Prickly lettuce, Lactuca serriola
Ragweed, Ambrosia spp.
Redstem stork's bill, Erodium cicutarium
Rough pigweed, Amaranthus retroflexus (Stephens 2009e)
Scarlet pimpernel, Anagallis arvensis
Shepherd's purse, Capsella bursa-pastoris
Showy rattlebox (=showy crotalaria), Crotalaria spectabilis
Sicklepod, Senna obtusifolia (Hall et al. 2009f)
Sowthistle, Sonchus spp.
Spiny sowthistle, Sonchus asper
Spoonleaf purple everlasting, Gnaphalium purpureum
Tropical soda apple, Solanum viarum (Sellers et al. 2010)
Virginia pepperweed, Lepidium virginicum
Wild bushbean, Macroptilium lathyroides
Wild radish, Raphanus raphanistrum (Hall et al. 2009g)
