CDC, FDA and USDA are not aware of any reports at this time that suggest COVID-19 can be transmitted by food or food packaging. Current evidence shows the biggest risk of transmission of COVID-19 is being around individuals who are symptomatic (and to a lesser extent, infected but not showing symptoms.) Food businesses should be following employee health policies and local health department recommendations to keep these individuals home.

**IS CORONAVIRUS A CONCERN AT GROCERY STORES?**

CAN I GET SICK WITH COVID-19 FROM TOUCHING FOOD OR PACKAGING IF THE VIRUS WAS PRESENT ON IT?
- There is no indication that food packaging material has served in significant connection to virus transmission.
- If concerned, handling of food packaging can be followed with handwashing and/or using hand sanitizer.

WHAT STEPS CAN I TAKE TO MINIMIZE RISK WHEN SHOPPING AT THE GROCERY STORE?
- Use hand sanitizer when entering stores, and wash hands and/or use sanitizer as soon as possible after leaving.
- Wear a cloth face covering while shopping.
- Try to maintain social distancing as much as possible while shopping.
- Avoid touching surfaces or items unnecessarily and avoid touching your mouth, nose or face.
- Do not go shopping when showing symptoms or think you have been exposed to the virus.

WHAT IS MY GROCERY STORE DOING TO MINIMIZE MY RISK?
- Many stores are following CDC guidelines on cleaning and disinfection. Some are limiting hours to allow for additional cleaning and disinfection.
- Stores may also be providing hand sanitizer to customers and be asking sick employees or customers to leave.
- Grocery employees are essential employees and encouraged to wear cloth face coverings.
- Stores may also limit the number of people allowed to shop at one time, and enforce physical distancing while in line inside and outside the store.
