Preface

This handbook is designed to provide an accurate, current, and authoritative summary of the principal federal and state (Florida) laws that directly or indirectly relate to agriculture. This handbook provides a basic overview of the many rights and responsibilities that farmers and farmland owners have under both federal and state laws as well as the appropriate contact information to obtain more detailed information. However, the reader should be aware that because the laws, administrative rulings, and court decisions on which this handbook is based are subject to constant revision, portions of this publication could become outdated at any time. Several details of cited laws are also left out due to space limitations.

This handbook is distributed with the understanding that the authors are not engaged in rendering legal or other professional advice, and the information contained herein should not be regarded as a substitute for professional advice. This handbook is not all inclusive in providing information to achieve compliance with the federal and state laws and regulations governing water protection. For these reasons, the use of these materials by any person constitutes an agreement to hold harmless the authors, the Florida Cooperative Extension Service, the Institute of Food and Agricultural Sciences, and the University of Florida for any liability claims, damages, or expenses that may be incurred by any person as a result of reference to or reliance on the information contained in this handbook.

General Purpose

This handbook is designed to act as a compass through the maze of statutes, regulations, and potential liabilities that identify the current mass of water protection law. Created for readers with no prior experience in law, it is designed as a necessary first step in recognizing which agricultural activities merit special attention because of their ground and surface water implications. It also provides an introduction to the crucial agencies and statutes that govern the realm of water protection.

The law in this area is evolving rapidly as concern for the environment increases. Because the sources and goals of the existing environmental statutes vary, the law as a whole has not developed with systematic precision. Current water regulation law presents a confusing array of overlapping, unclear, and sometimes contradictory mandates and, consequently, can be a formidable barrier to both lawyers and laypersons struggling to determine their exact rights and responsibilities. Perseverance is necessary because penalties or liabilities in some instances are quite substantial.

This work is not a comprehensive study and therefore should not be regarded as the final word on any of the topics discussed. Rather, the reader should view this publication as a means to determine the areas in which to seek more information and as a brief directory of agencies that can help answer more specific questions. Federal and state agencies are unquestionably the best targets for

1. This is EDIS document FE580, a publication of the Food and Resource Economics Department, Florida Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida, Gainesville, FL. Published December 2005, revised June 2011. Please visit the EDIS website at http://edis.ifas.ufl.edu.

2. Michael T. Olexa, professor, Food and Resource Economics Department, and director, Agricultural Law Center, University of Florida, and chair, Agricultural Law Committee, The Florida Bar, and Zachary Broome, student, Levin College of Law, University of Florida, Gainesville, FL; Florida Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida, Gainesville, FL 32611.
specific questions because they are in close touch with both the formal and practical considerations of the areas they regulate. For addresses and/or telephone numbers of the agencies and divisions, see FE616, Contact Agencies. These agencies can provide more information on the topic, answer specific questions, and often supply free literature.

This handbook's effectiveness can only be enhanced by the submission of ideas and suggestions about the scope and quality of its coverage. Comments regarding any areas that may have been omitted but deserve inclusion would be particularly valued. Reader feedback is a necessary ingredient to complete any successful future editions. With this in mind, please send any comments or suggestions to the following address:
