

# Economic Contributions of Agriculture, Natural Resources, and Related Food Industries in Florida in 2012<sup>1</sup>

Alan W. Hodges, Mohammad Rahmani, and Thomas J. Stevens<sup>2</sup>

## Executive Summary

Agriculture, natural resources, and related food industries remain a significant force in the economy of Florida, and it is important to recognize their economic contributions for informed public policy. The economic contributions of these industries were re-evaluated for calendar year 2012 to update previous reports and to provide current information on economic trends in the wake of the historic global recession of 2007–2009.

This analysis was conducted using the *IMPLAN* regional economic modeling system and associated state and county databases (*IMPLAN* group LLC) to estimate economic multipliers that capture the additional economic activity generated by re-spending of income in the local economy arising from new final demand. The set of industry sectors included in this analysis was selected to represent a broad array of activities for agricultural and natural resource commodity production, distribution, and supporting services. The extent of the total effects of a particular activity or event in a region (state, county) is measured by several yardsticks, including employment, output, value added, export, labor income, other property income, and indirect business taxes. Value added is a preferred measure of economic activity because it is comparable to gross

domestic product. A glossary of economic impact terms that follows this summary will orient the reader to technical terms used in this report. Economic contribution results for Florida's agriculture, natural resources, and related food industries for 2012 are summarized in Table ES1:

- Industry output or sales revenues of \$141.79 billion
- Total employment impacts (including indirect/induced multiplier effects arising from foreign and domestic exports of \$65.85 billion) of 2.1 million full-time and part-time jobs representing 20.8 percent of all jobs in the state
- Total value added impacts (including multiplier effects) of \$119.98 billion, representing 14.9 percent of Gross State Product (GDP)
- Total labor income impacts of \$75.92 billion which include employee wages and fringe benefits, business proprietor income, and total property income impacts of \$30.77 billion
- Impacts/contributions from taxes on production and imports paid to local, state, and federal governments totaled \$13.29 billion

Across the various groups of agriculture, natural resource, and related food industry sectors, total employment and

value added impacts were largest for the *Food and Kindred Products Distribution* industry group (1.28 million jobs; \$67.26 billion), which includes food service establishments (restaurants and bars) and retail food stores. The employment and value added contributions of other industry sectors/groups in descending order include *Agricultural Inputs and Services* (314,140 jobs; \$14.95 billion), *Crop, Livestock, Forestry, and Fisheries Production* (226,884 jobs; \$13.31 billion), *Food and Kindred Product Manufacturing* (129,332 jobs; \$12.08 billion), *Forest Product Manufacturing* (70,681 jobs; \$6.62 billion), *Mining* (60,256 jobs; \$4.18 billion), and *Nature-Based Recreation* (17,323 jobs; \$1.58 billion). Excluding the *Food and Kindred Products Distribution* industry group, total value added impacts represented 6.56 percent of Gross State Product and employment was 8.13 percent of total state employment.

Information on economic contributions was also regrouped and evaluated for seven agricultural commodity groups that have identifiable market-chain linkages between production and processing/manufacturing sectors. The total employment and value added contributions were highest for the *Environmental Horticulture* group (227,222 jobs; \$10.21 billion), followed by *Forestry and Forest Products* (84,302 jobs; \$7.64 billion), *Fruit and Vegetable Farming and Processing* (83,024 jobs; \$7.10 billion), *Sugarcane Farming and Refined Sugar Manufacturing* (36,733 jobs; \$1.50 billion), *Livestock and Dairy Farming and Animal Products Manufacturing* (25,310 jobs; \$1.40 billion), *Fishing and Seafood Products* (12,178 jobs; \$526 million), and *Grain and Oilseed Farming and Processing* (2,986 jobs; \$278 million).

Geographically, the size and composition of agriculture, natural resources, and related food industries vary dramatically across the state of Florida due to differences in climate, natural resource endowments, and population and settlement patterns. The largest economic contributions occurred in the major metro areas of Miami-Ft. Lauderdale, Orlando, Tampa-St. Petersburg, Sarasota-Bradenton, and Jacksonville, where there are large demands for food and kindred products, and a large workforce available for the industry (Table ES1). The eight largest counties in terms of total employment and value added impacts were Miami-Dade (252,806 jobs; \$15.80 billion), Broward (177,251 jobs; \$9.99 billion), Orange (166,312 jobs; \$9.81 billion), Palm Beach (165,152 jobs; \$9.85 billion), Hillsborough; (154,912 jobs; \$10.32 billion), Duval (111,564 jobs; \$7.76 billion), Polk (97,461 jobs; \$6.76 billion), and Pinellas (94,056 jobs; \$4.74 billion). However, the economic contributions of agriculture and related industries are also relatively more important in many rural areas, where these industries represent a higher share of total economic activity. Additional detailed information on economic

contributions in individual Florida counties is available in the Appendix.

Direct employment in the agriculture, natural resources, and related food industries in Florida grew from 1.281 million jobs in 2001 to a peak of 1.403 million jobs in 2008, before declining to 1.331 million jobs in 2009 during the recession. In 2012, direct employment increased again to 1.46 million jobs, which was 14.4 percent higher than 2001, representing average annual growth of 0.9 percent, and total employment impacts increased to 2.10 million jobs, reflecting a dramatic increase in exports of Florida products to domestic and world markets. Average annual growth in value added impacts during 2001–2012 was highest for *Mining* (8.4%), followed by *Agricultural Inputs and Services* (5.3%), and *Food and Kindred Products Distribution* (4.4%). Growth rates in agriculture and related industries were higher than in many other Florida industries during the recent period.

## Glossary of Economic Impact Terms

**Contribution** (economic) represents the gross change in economic activity associated with an industry, event, or policy in an existing regional economy.

**Employee compensation** is comprised of wages, salaries, commissions, and benefits such as health and life insurance, retirement, and other forms of cash or non-cash compensation.

**Employment** is a measure of the number of jobs involved, including full-time, part-time, and seasonal positions. It is not a measure of full-time equivalents (FTE).

**Exports** are sales of goods to customers outside the region in which they are produced, which represents a net inflow of money to the region. This also applies to sales of services to customers visiting from other regions.

**Final Demand** represents sales to final consumers, including households, governments, and exports from the region.

**Gross Regional Product** is a measure of total economic activity in a region, or total income generated by all goods and services. It represents the sum of total value added by all industries in that region, and is equivalent to Gross Domestic Product for the nation.

**IMPLAN** is a computer-based input-output modeling system that enables users to create regional economic models and multipliers for any region consisting of one or

more counties or states in the United States. The current version of the *IMPLAN* software, version 3, accounts for commodity production and consumption for 440 industry sectors, 10 household income levels, taxes to local/state and federal governments, capital investment, imports and exports, transfer payments, and business inventories. Regional datasets for individual counties or states are purchased separately.

**Impact or total impact** is the net change in total regional economic activity (e.g., output or employment) resulting from a change in final demand, direct industry output, or direct employment, estimated based on regional economic multipliers.

**Imports** are purchases of goods and services originating outside the region of analysis.

**Income** is the money earned within the region from production and sales. Total income includes labor income such as wages, salaries, employee benefits, and business proprietor income, plus other property income.

**Tax on Production and Imports** are taxes paid to governments by individuals or businesses for property, excise, and sales taxes, but do not include income taxes.

**Input-Output (I-O) model and Social Accounting Matrix (SAM)** is a representation of the transactions between industry sectors within a regional economy that captures what each sector purchases from every other sector in order to produce its output of goods or services. Using such a model, flows of economic activity associated with any change in spending may be traced backwards through the supply chain.

**Local** refers to goods and services that are sourced from within the region, which may be defined as a county, multi-county cluster, or state. Non-local refers to economic activity originating outside the region.

**Margins** represent the portion of the purchaser price accruing to the retailer, wholesaler, and producer/ manufacturer, in the supply chain. Typically, only the retail margins of many goods purchased by consumers accrue to the local region, as the wholesaler, shipper, and manufacturer often lie outside the local area.

**Multipliers** capture the total effects, both direct and secondary, in a given region, generally as a ratio of the total change in economic activity in the region relative to the direct change. Multipliers are derived from an I-O model of the regional economy. Multipliers may be expressed as

ratios of sales, income, or employment, or as ratios of total income or employment changes relative to direct sales. Multipliers express the degree of interdependency between sectors in a region's economy and therefore vary considerably across regions and sectors. A **sector-specific multiplier** gives the total changes to the economy associated with a unit change in output or employment in a given sector (i.e., the **direct economic effect**) being evaluated. **Indirect effects multipliers** represent the changes in sales, income, or employment within the region in backward-linked industries supplying goods and services to businesses (e.g., increased sales in input supply firms resulting from more nursery industry sales). **Induced effects multipliers** represent the increased sales within the region from household spending of the income earned in the direct and supporting industries for housing, utilities, food, etc. An **imputed multiplier** is calculated as the ratio of the total impact divided by direct effect for any given measure (e.g. output, employment).

**Other property income** represents income received from investments, such as corporate dividends, royalties, property rentals, or interest on loans.

**Output** is the dollar value of a good or service produced or sold, and is equivalent to sales revenues plus changes in business inventories.

**Producer prices** are the prices paid for goods at the factory or point of production. For manufactured goods the purchaser price equals the producer price plus a retail margin, a wholesale margin, and a transportation margin. For services, the producer and purchaser prices are equivalent.

**Proprietor income** is income received by non-incorporated private business owners or self-employed individuals.

**Purchaser prices** are the prices paid by the final consumer of a good or service.

**Region or Regional Economy** is the geographic area and the economic activity it contains for which impacts are estimated. It may consist of an individual county, an aggregation of several counties, a state, or aggregation of states. These aggregations are sometimes defined on the basis of worker commuting patterns.

**Sector** is an individual industry or group of industries that produce similar products or services, or have similar production processes. Sectors are classified according to the North American Industrial Classification System (NAICS).

**Value Added** is a broad measure of income, representing the sum of employee compensation, proprietor income, other property income, indirect business taxes and capital consumption (depreciation). Value added is a commonly used measure of the contribution an industry to regional economy because it avoids double counting of intermediate sales.

## Introduction

Agriculture, natural resources, and related food industries represent a major set of economic activities generating employment and income, and, producing goods and services that contribute to the economic growth and development of Florida and the United States. These industries utilize the natural resources within Florida (in the form of 24 million acres [36,000 square miles] of forests, croplands, and ranches underneath a sub-tropical climate) to produce a huge variety of food, fiber, and mineral commodities. The unrefined commodities are converted into finished products by the food and kindred product manufacturing industries, and finished goods then move through the wholesale and retail distribution chain to final consumers or to other industry sectors as intermediate goods for further value-added processing. These industries are also linked to a broad array of allied suppliers that provide production inputs and supporting services. In addition, natural landscapes and other undeveloped lands provide an array of opportunities for nature-based recreation and eco-tourism. Thus, the chain of agricultural and related food industry activities encompasses from-farm-to-table and beyond.

The purpose of this study is to estimate the economic impacts of agricultural- and other natural-resource-based activities to the state of Florida. Economic impact analysis assesses the effect of a new or present activity, industry, or event on the overall economy of a region such as a state, county, or city. Any activity that generates payments has an effect on other parts of a given economy (study area), and any expenditure by one person or entity becomes income to another entity. As an analogy, consider the waves generated from a stone thrown in a lake that spread out in all directions. In economic impact analysis, these are called secondary effects and are measured through economic multipliers for each type of activity (industry sector) obtained from regional economic models

Assessment of the economic contributions of specific industries to the economy of Florida is important to making informed public policy decisions regarding future economic and community development, job creation, environmental regulation, labor and human resources, and taxation,

among other issues. This report provides estimates of the economic contributions to the state of Florida in 2012 by a set of broadly defined industries comprising agriculture, natural resources and related food activities. It updates and continues a series of annual studies done previously for 2006–2011 (Hodges, Rahmani, and Stevens 2013, 2012, 2011; Hodges and Rahmani 2010, 2009; Hodges, Rahmani, and Mulkey 2008).

## Methods

Data for this analysis were obtained from the *IMPLAN* database for the state of Florida and its counties for 2001–2012 (*IMPLAN* Group LLC), which in turn were derived from the *National Income and Product Accounts for the United States* (United States Department of Commerce, Bureau of Economic Analysis), the *Quarterly Census of Employment and Wages* (United States Bureau of Labor Statistics), and other sources. Over 90 individual industry sectors in the *IMPLAN* system were identified as related to agriculture and natural resource commodity production, input supply and supporting services, food and kindred product manufacturing, forest product manufacturing, food and kindred product distribution, and nature-based recreation. A complete list of industry groups and individual sectors included in the analysis is shown in Table 1. Note that some industry sectors in this analysis were reclassified from their original major industry group designation under the *North American Industry Classification System* (NAICS) to be included as part of the broadly defined agriculture and food-related industries. The rationale for including processing or manufacturing industries in this analysis is that they share a common dependence upon the natural resource base, and would not exist in the state if not for the basic production activities. Food and kindred product distribution sectors, such as wholesalers, food stores, and restaurants, although not strictly dependent upon Florida's agricultural production and natural resources, were also included in the analysis because they are the endpoint of the market chain for the delivery of agricultural and food products to final consumers.

Economic contribution information was also re-grouped for several recognizable commodity groups that have strong linkages (as in many vertically integrated firms or long-term supply contracts) between agricultural production and processing/manufacturing sectors. These included environmental horticulture (nursery and greenhouse production, landscape services, retail garden centers), fruit and vegetable farming-processing, forestry-logging-forest product manufacturing, sugarcane-refined sugar manufacturing, livestock-animal products manufacturing, and fishing-seafood products.

The total regional economic impacts for each sector were estimated using models developed with the *IMPLAN* software for social accounting and impact analysis (*IMPLAN* Group, LLC). This system enables construction of input-output models and social accounting matrices that represent the structure of a regional economy in terms of transactions among industry sectors, households, and governments. Regional economic models were developed for the state of Florida and for all 67 counties in the state using the *IMPLAN* software and Florida state-county data package for 2012. Models were constructed with econometrically estimated regional purchase coefficients representing the share of commodities purchased from local sources. Also, social-institutional accounts for households, local-state-federal governments, and capital investment were treated as endogenous within the models.

The *IMPLAN* model includes accounts for industrial and commodity production, employment, labor and property income, household and institutional consumption, domestic and international trade (imports, exports), government taxes, transfer payments (such as welfare and retirement), and capital investment. Economic multipliers are calculated for each industry to estimate the secondary effects of new demand that generates further economic activity as it is spent in the local economy (Miller and Blair 2009). Indirect effects multipliers represent the economic activity generated in the supply chain through the purchase of intermediate inputs from vendor firms, while induced effects multipliers represent the impacts of spending by industry employee households and governments. The indirect and induced multipliers were applied only to foreign and domestic exports, or sales to visitors from outside the state of Florida, which represent new money flowing into the regional economy. The total economic impacts were calculated as the sum of direct, indirect, and induced effects. Therefore, while the estimates of this analysis are referred to as *economic impacts*, these values may be better understood as *economic contributions* because they represent the ongoing economic activity of existing industries, rather than a net change in activity resulting from external influences (Watson et al. 2007).

Measures of economic impacts reported here include output or revenue, value added, employment (including full-time, part-time, and seasonal positions), labor income, property income, and indirect business taxes paid to local, state, and federal governments. Value added is a broad measure of net economic activity that is comparable to the Gross Domestic Product, and represents the sum of labor and other property income, indirect business taxes, and capital consumption (depreciation). Note that industry output includes some double-counting of sales from one

level of the market chain to the next (e.g., sales of citrus juice products by processors includes the value of citrus fruit purchased from growers), while value added does not have such double-counting because the value of intermediate inputs purchased from other sectors is netted-out. A glossary of economic impact analysis terminology is provided following the Executive Summary.

Summary information was developed for the state of Florida, all 67 counties, and nine multi-county regions. These functional economic areas represent core metropolitan areas and adjacent nonmetropolitan counties linked by employee commuting patterns, as defined by the United States Bureau of Economic Analysis (Johnson and Kort 2004). It should be noted that some counties in North Florida that are part of economic areas in Georgia were regrouped with the Florida regions for this analysis. Due to differences in trade flows and accounting adjustments at the state and county levels, slight discrepancies in regional results were reconciled by forcing county and regional estimates to match with state totals.

For some activities that were not specifically identified in *IMPLAN*, values were estimated as a share of their parent sector based on data from the 2007 Economic Census and previous special studies: *Landscape services and Pest control services* were 49 percent and 15 percent, respectively, of *Services to buildings*; *Wholesale food distribution* was 20 percent of *Wholesale trade*; *Retail lawn-and-garden centers* were 19 percent of *Building materials and garden stores*; *Golf courses and Recreational fishing* were 48 percent and 10 percent, respectively, of *Amusement and recreation services*.

Reported employment figures represent all full-time, part-time, and temporary or seasonal jobs, rather than full-time equivalent employees. All monetary values were expressed in 2012 USD using the mid-year (July) indices for the Gross Domestic Product (GDP) Implicit Price Deflator, which accounts for the effects of price changes in the measurement of GDP (United States Department of Commerce). Note that *IMPLAN* data were not available for 2005. Also, note that results for 2001 to 2010 were revised in light of new information, so findings presented here do not necessarily match those previously reported (Hodges, Rahmani, and Stevens 2013, 2012, 2011; Hodges and Rahmani 2010, 2009; Hodges, Rahmani, and Mulkey 2008).

# Results

## Economic Contributions by Industry Groups and Sectors

Economic contributions of agriculture, natural resources and related food industries by major industry groups and individual industry sectors in Florida for 2012 are shown in Table 1 and summarized in Figures 1 to 3. The industries are categorized in seven major groups: *Crop, Livestock, Forestry, and Fisheries Production*; *Agricultural Inputs and Services*; *Food and Kindred Products Manufacturing*; *Forest Products Manufacturing*; *Mining*; *Nature-based Recreation*; and *Food and Kindred Products Distribution*. Results are reported below for each major group, each sector within the groups, all groups combined, and for all groups excluding *Food and Kindred Products Distribution*.

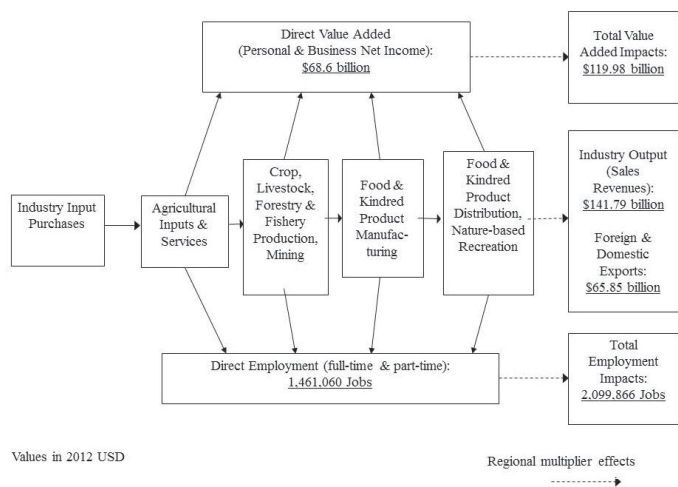

Figure 1. Structure of economic activity in agriculture, natural resources and related food industries in Florida in 2012.

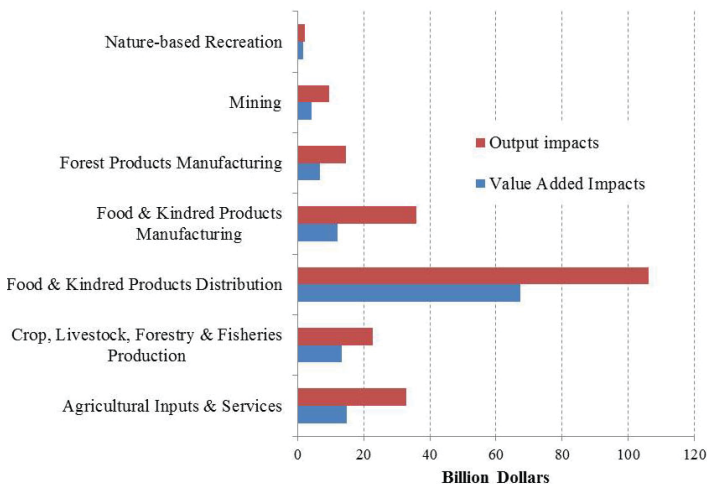

Figure 2. Total output and value added contributions of agriculture, natural resources and related food industry groups in Florida in 2012.

Direct industry output or sales revenues in 2012 were \$141.39 billion. Foreign and domestic exports of goods and services outside of Florida totaled \$54.69 billion. Direct

employment in these industries was 1.456 million full-time and part-time jobs, and total employment impacts (including multiplier effects) were estimated at 2.10 million jobs. The direct value-added contributions of these industries were \$68.61 billion, and total value-added impacts were \$119.98 billion. The total labor (earned) income impacts of employee wages and benefits and business proprietor income were \$75.92 billion. Total other property income impacts, such as rents, interest, royalties and dividends, amounted to \$30.77 billion. Total taxes on production and imports paid to local, state, and federal governments were \$13.29 billion (Table 1).

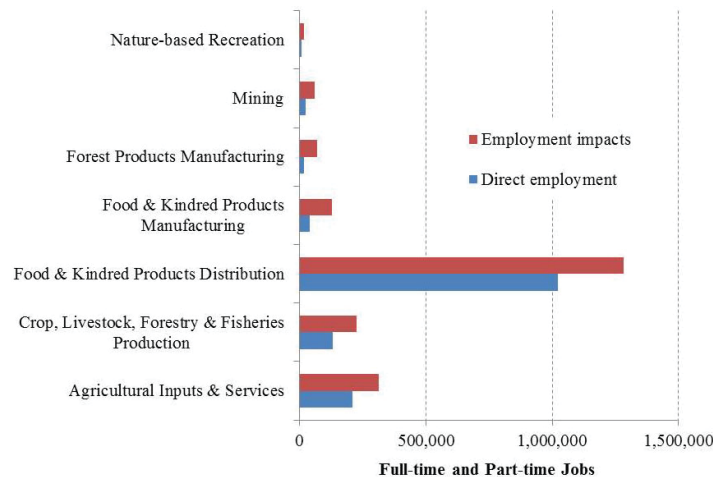

Figure 3. Direct employment and total employment contributions of agriculture, natural resources and related food industry groups in Florida in 2012.

### Crop, Livestock, Forestry, and Fisheries Production

includes sectors for the production of basic unrefined food and fiber commodities. In 2012, total direct output of these sectors was \$11.22 billion, exports were \$7.25 billion, and total output impacts were \$22.63 billion (Table 1, Figures 2 to 3). Direct value added was \$6.07 billion and total value added impacts were \$13.31 billion. Direct employment was 130,825 jobs and total employment impacts were 226,884 jobs (Table 1, Figure 3). Labor income impacts were \$8.65 billion, other property-income impacts were \$4.01 billion, and taxes on production and imports impacts were \$649 million. Among individual industry sectors in this group, the highest total value-added impacts were for *Support activities for agriculture and forestry* (3.28 billion), *Fruit Farming* (\$2.43 billion), *Greenhouse, nursery, and floriculture production* (\$2.42 billion), *Vegetable and melon farming* (\$1.89 billion), and *Sugarcane farming* (\$682 million). The highest total employment impacts were for *Support activities for agriculture and forestry* (74,370 jobs), *Fruit Farming* (30,105 jobs), *Greenhouse, nursery, and floriculture production* (29,567 jobs), *Sugarcane farming* (23,757 jobs), and *Vegetable and melon farming* (22,235 jobs). Large value-added and employment impacts were

also generated by the sectors *Forestry and timber tracts production* (\$743 million; 9,478 jobs), *Commercial fishing* (\$425 million; 10,452 jobs), *Dairy cattle and milk production* (\$296 million; 4,440 jobs), and *Cattle ranching and farming* (\$317 million; 8,576 jobs). In addition, value added impacts of more than \$100 million were observed for *All other crop farming*, *Commercial logging*, and *Poultry and egg production*.

**Agricultural Inputs and Services** includes a variety of sectors providing inputs or supporting services for agricultural operations, including landscape management. Sales revenues in 2012 to this group came to \$18.57 billion and included export sales of \$10.62 billion. This resulted in total output impacts for this group of \$32.74 billion (Table 1, Figures 2 to 3). Direct value added was \$6.57 billion and total value added impacts were \$14.95 billion for 2012. Direct employment was 210,620 jobs and total employment impacts came to 314,140 jobs (Figure 3). Total labor income impacts were \$10.50 billion, other property-income impacts were \$3.47 billion, and total impacts from taxes on production and imports were \$976 million. Among leading sectors in this group, *Landscape services* had total value-added impacts of \$7.24 billion and total employment impacts of 188,143 jobs, followed by *Fertilizer manufacturing* (\$4.61 billion; 51,462 jobs), *Pest control services* (\$1.53 billion; 39,710 jobs), and *Veterinary services* (\$1.32 billion; 31,840 jobs). Other minor sectors in this group included *Pesticide and other agricultural chemical manufacturing*, *Farm machinery and equipment manufacturing*, and *Lawn and garden equipment manufacturing*.

**Food and Kindred Products Manufacturing** is a large industry group that includes 34 individual sectors for converting unrefined agricultural commodities into food products for final consumption or use. In 2012, this industry group had direct output of \$23.97 billion, exports of \$10.64 billion, and output impacts of \$36.03 billion. Direct employment was 40,604 jobs and total employment impacts were 129,332 jobs. The industry group had direct value-added of \$4.92 billion, total value added impacts of \$12.08 billion, labor income impacts of \$6.70 billion, other property-income impacts of \$4.26 billion and taxes on production and imports impacts of \$1.12 billion (Table 1, Figures 2 and 3). Among individual sectors, the highest value added and employment impacts were for *Soft drink and ice manufacturing* (\$3.13 billion; 35,573 jobs), *Fruit and vegetable canning, pickling and drying* (\$1.73 billion; 18,555 jobs), *Tobacco product manufacturing* (\$1.12 billion; 1,823 jobs), *Frozen Food Manufacturing* (\$1.04 billion; 12,082 jobs), *Breweries* (\$903 million; 7,830 jobs), *Sugarcane mills and refining* (\$816 million; 12,977 jobs), and *Distilleries* (\$513 million; 4,559 jobs). Other sectors with

significant value added impacts included *Bread and bakery product manufacturing* (\$425 million), *Other animal food manufacturing* (\$331 million), *All other food manufacturing* (\$323 million), *Fluid milk and butter manufacturing* (\$254 million), *Flour milling and malt manufacturing* (\$197 million), *Snack food manufacturing* (\$148 million), and *Coffee and tea manufacturing* (\$145 million).

**Forest Products Manufacturing** is a group of industries that processes raw timber or wood into finished wood and paper products. In 2012, this industry group had direct output valued at \$7.59 billion, exports of \$5.19 billion, total output impacts of \$14.58 billion. In 2012 it had direct employment of 18,326 jobs, which led to total employment impacts of 70,681 jobs. It also generated direct value added of \$2.31 billion, total value added impacts of \$6.62 billion, total labor income impacts of \$3.80 billion, total other property income impacts of \$2.33 billion, and total impacts from taxes on production and imports of \$492 million (Table 1, Figures 2 and 3). Leading sectors within this group in terms of value added and employment impacts were *Paperboard container manufacturing* (\$1.12 billion; 12,804 jobs), *Paper mills* (\$1.20 billion; 12,066 jobs), *Sanitary paper products manufacturing* (\$1.15 billion; 9,219 jobs), *Paperboard mills* (\$855 million; 8,840 jobs), *Pulp mills* (\$824 million; 8,777 jobs), and *Stationary product manufacturing* (\$305 million; 3,493 jobs). Other sectors with significant value-added impacts included *Engineered wood member and truss manufacturing* (\$263 million), *Coated and laminated paper packaging paper and plastics film manufacturing* (\$194 million), *Sawmills and wood preservation* (\$183 million), and *Wood window and door manufacturing* (\$169 million).

**Mining** is a natural-resource based activity for the extraction of basic mineral commodities such as oil, natural gas, stone, sand, gravel, clay, phosphate, and a variety of metals. In 2012, the mining industries in Florida collectively had direct output of \$4.67 billion, exports of \$2.85 billion, and total output impacts of \$9.44 billion. This industry group also had direct employment of 25,185 jobs, total employment impacts of 60,256 jobs, direct value added of \$1.17 billion, total value added impacts of \$4.18 billion, labor income impacts of \$2.24 billion, other property income impacts of \$1.62 billion, and taxes on production and imports impacts of \$314 million (Table 1, Figures 2 and 3). The largest individual sector was *Extraction of oil and natural gas*, which generated total value added impacts of \$1.67 billion and total employment impacts of 37,104 jobs. Other individual sectors with significant total value-added and employment impacts included *Mining and quarrying other nonmetallic minerals* (\$743 million; 6,601 jobs), *Mining and quarrying stone* (\$741 million; 6,248 jobs), *Mining and quarrying sand, gravel, and clay* (\$392 million;

4,182 jobs), *Mining iron ore* (\$264 million; 1,928 jobs) and *Drilling of oil and gas wells* (\$87 million; 1,186 jobs). Other minor sectors in this industry group were *Support activities for oil and gas operations*, *Mining gold, silver and other metal ore*, and *Support activities for other mining*.

**Nature-Based Recreation** includes recreational activities generally tied to natural resources or managed landscapes, such as golf, recreational fishing, and, hunting and trapping. In 2012, this industry group in Florida had a direct output of \$1.01 billion; exports or sales to Florida visitors of \$666 million, total output impacts of \$2.18 billion, direct employment of 7,717 jobs, total employment impacts of 17,323 jobs, direct value-added of \$828 million, total value-added impacts of \$1.58 billion, labor income impacts of \$777 million, other property-income impacts of \$652 million, and taxes on production and imports impacts of \$153 million (Table 1, Figures 2 and 3). Among individual sectors, *Golf courses* had total value added impacts of \$517 million and employment impacts of 9,610 jobs. The impacts for *Commercial hunting and trapping* were \$1.06 billion and 7,648 jobs respectively.

**Food and Kindred Products Distribution** includes activities for wholesale and retail trade in agricultural, food, and related products. This group of industry sectors is only indirectly related to agriculture and natural resources because it serves to deliver products to final consumers, but it is included here for a perspective on the scope of the complex market chain for food and kindred products. In 2012, this industry group in Florida had a direct output of \$74.36 billion, exports of \$17.47 billion, and total output impacts of \$106.19 billion. It also generated direct employment of 1,023,149 jobs, total employment impacts of 1,281,250 jobs, direct value added of \$46.74 billion, total value added impacts of \$67.26 billion, total labor income impacts of \$43.25 billion, other property-income impacts of \$14.41 billion, and taxes on production and imports impacts of \$9.59 billion (Table 1, Figures 2 and 3). Collectively, this group represented about 56 percent of total value-added impacts and 61 percent of total employment impacts for all industries included in this report. Among individual sectors within this group, *Food service establishments and drinking places* (restaurants and bars) had the greatest value-added impacts (\$38.01 billion) and employment impacts (878,165 jobs), followed by *Wholesale trade in food and kindred products* (\$18.27 billion; 165,289 jobs), *Retail stores, food and beverage stores* (\$10.43 billion; 228,285 jobs), and, *Retail lawn and garden centers* (\$551 million; 9,511 jobs).

Excluding sectors for *Food and Kindred Products Distribution*, the total economic values for all other agriculture, natural resources and related food industries were \$67.03

billion in direct output, including exports of \$37.22 billion, total output impacts of \$117.60 billion, direct employment of 433,277 jobs, total employment impacts of 818,617 jobs, direct value-added of \$21.87 billion, total value added impacts of \$52.72 billion, total labor income impacts of \$32.67 billion, total other property income impacts of \$16.35 billion, and total impacts from taxes on production and imports of \$3.70 billion (Subtotaled in Table 1).

## Economic Contributions by Agriculture and Natural Resource Commodity Groups

In addition to the industry groups noted above, information on economic contributions was reorganized to evaluate groups of food and fiber commodities having identifiable market-chain linkages between producers, manufacturers, and service sectors. In this section, some sectors are re-grouped to reflect these linkages, with results summarized in Figures 4 and 5. **Environmental Horticulture**, which includes the sectors *Greenhouse, nursery and floriculture production*, *Landscape services*, and *Retail lawn and garden centers*, had combined value added impacts of \$10.21 billion and employment impacts of 227,222 jobs. **Fruit and Vegetable Farming and Processing**, including sectors for *Fruit farming*, *Vegetable and melon farming*, *Frozen food manufacturing*, and *Fruit and vegetable canning, pickling and drying*, had combined value added impacts of \$7.10 billion and employment impacts of 83,024 jobs. **Forestry and Forest Products**, including the sectors *Forestry and timber tracts*, and *Logging* as well as 16 forest product manufacturing sectors, had combined value-added impacts of \$7.64 billion and employment impacts of 84,302 jobs. **Sugarcane Farming and Refined Sugar and Confections Manufacturing** had combined value-added impacts of \$1.50 billion and employment impacts of 36,733 jobs. **Livestock and Dairy Farming, and Animal Products Manufacturing**, including the production sectors *Beef cattle ranching and farming*, *Dairy cattle and milk production*, *Poultry and egg production*, *Animal production except cattle and poultry*, *Animal slaughtering*, *Poultry processing*, *Cheese manufacturing*, and *Ice cream manufacturing*, had combined value-added impacts of \$1.40 billion and employment impacts of 25,310 jobs. **Fishing and Seafood Products** combined had value added impacts of \$526 million and employment impacts of 12,178 jobs. The group **Grain and Oilseed Farming and Processing** had combined value-added and employment impacts of \$278 million and 2,986 jobs.

## Economic Contributions in Florida Regions and Counties

Regional impacts of agriculture, natural resources, and related food industries in 2012 were evaluated for all 67 Florida counties and nine multi-county economic regions as shown in Figure 6, with results summarized in Tables 2 and 3, and Figures 7, 8, and 9. Value-added and employment impacts were highest in the Miami-Ft. Lauderdale region (\$41.20 billion; 702,990 jobs), followed by Orlando (\$28.54 billion; 511,623 jobs), Tampa-St. Petersburg (\$16.66 billion; 286,605 jobs), Jacksonville (\$11.12 billion; 165,993 jobs), Sarasota-Bradenton (\$11.47 billion; 219,235 jobs), Pensacola (\$3.63 billion; 72,496 jobs), Gainesville (\$2.69 billion; 55,046 jobs), Tallahassee (\$2.67 billion; 49,012 jobs), and Panama City (\$2.00 billion; 36,866 jobs).

Among individual Florida counties, the eight largest counties in terms of value added impacts and employment

impacts in 2012 were Miami-Dade (\$15.80 billion; 252,806 jobs), followed by Hillsborough (\$10.32 billion; 154,912 jobs), Orange (\$9.81 billion; 166,312 jobs), Broward (\$9.99 billion; 177,251 jobs), Palm Beach (\$9.85 billion; 165,152 jobs), Duval (\$7.76 billion; 111,564 jobs), Polk (\$6.76 billion; 97,461 jobs), and Pinellas (\$4.74 billion; 94,056 jobs). Twenty additional counties—up from 16 counties in 2011—had total value-added impacts exceeding \$1 billion in 2012. These were Lee (\$3.17 billion), Manatee (\$2.70 billion), Collier (\$2.59 billion), Seminole (\$2.35 billion), Sarasota (\$2.00 billion), Volusia (\$1.77 billion), Escambia (\$1.65 billion), Lake (\$1.57 billion), Brevard (\$1.49 billion), Bay (\$1.41 billion), Marion (\$1.31 billion), Alachua (\$1.27 billion), Osceola (\$1.23 billion), St. Lucie (\$1.22 billion), Pasco (\$1.10 billion), Martin (\$1.10 billion), Nassau (\$1.10 billion), Leon (\$1.04 billion), Monroe (\$1.04 billion), and St. Johns (\$1.01 billion). Thematic maps of the total value added and employment impacts for Florida counties are shown in Figures 8 and 9, respectively.

Additional detailed information on economic contributions in individual Florida counties is available in the Appendix.

## Share of Florida Gross Domestic Product and Employment

The relative importance of agriculture, natural resources, and related food industries in Florida can be gauged by their share of overall economic activity in the state. The Gross Domestic Product of Florida in 2012, equivalent to the sum of direct value-added for all industries, was \$803.91 billion, and total employment in the state was 10.10 million jobs. The direct value-added of agriculture, natural resources and related food industries in Florida was \$68.61 billion in 2012, which represented 8.5 percent of the Gross Domestic Product (Figure 10), while the total value-added impact, including regional multiplier effects, was \$119.98 billion, representing 14.9 percent of Gross State Product.

Direct employment by agriculture, natural resources and related food industries was 1.46 million full-time and part-time jobs, representing 14.5 percent of all jobs in the state in 2012 (Figure 11), while total employment impacts of 2.1 million full-time and part-time jobs represented 20.8 percent of all jobs in the state. Excluding the *Food and Kindred Products Distribution* industry group, agriculture, natural resources and related food industries represented 6.56 percent of total contributions to Gross Domestic Product and 8.11 percent of total state employment.

## Trends in Economic Contributions over Time

In addition to the status of economic contributions made by agriculture, natural resources and related food industries to the state in 2012, it is important to understand how these values have changed over time. Trends in the economic contributions between 2001 and 2012 are shown in Figures 14 through 18, with all monetary values adjusted for inflation and expressed in constant 2012 US dollars. Note that these trends may reflect changes in commodity prices, the structure of Florida’s economy, and the business cycle of the national and global economy.

Direct employment in Florida’s agriculture, natural resources and related food industries grew from 1.28 million jobs in 2001 to 1.40 million jobs in 2008, then declined to

1.33 million jobs in 2009, as a result of the global recession, but recovered to 1.46 million in 2012. Annual job growth in agriculture and related industries averaged 0.9 percent over the eleven-year period. Total employment impacts increased to 2.1 million jobs in 2012, reflecting an increase in exports to domestic and world markets, and representing a 1.5 percent average annual growth between 2001 and 2012 based on the linear regression trend (Figure 14).

Figure 14. Trend in employment contributions by agriculture, natural resources and related food industries in Florida, 2001 to 2012.

Note: Data unavailable for 2005. Estimates include regional multiplier effects.

Source: IMPLAN data for Florida

Total value added impacts grew from \$82.34 billion in 2001 to \$119.98 billion in 2012, representing a 2.9 percent average annual growth rate in inflation-adjusted terms (Figure 15). Among industry groups, average annual percent growth in value added impacts from 2001 to 2012 was highest for *Mining* (8.4%), followed by *Agricultural Inputs and Services* (5.3%), and *Food and Kindred Products Distribution* (4.4%), while groups with negative growth during this period included *Food and Kindred Product Manufacturing* (–1.0%), and *Nature-based recreation* (–12%).

Trends in employment and value added contributions among Florida’s food and fiber commodity groups between 2001 and 2012 are shown in Figures 16 and 17. The *Environmental Horticulture* commodity group showed the highest increase in employment impacts (53.5%), followed by *Agricultural Inputs and Services* (9.3%), and *Sugarcane Farming, Refined Sugar and Confections* (5.2%). Commodity groups that suffered a decline in employment impacts included *Grain and Oilseed Farming, and, Processing* (–42%), *Livestock Farming and Animal Products Manufacturing* (–36%), *Fruit and Vegetable Farming and Processing* (–6%),

and Fishing and Seafood Products (-5.6%) (Figure16). The *Agricultural Inputs and Services* commodity group had the highest growth in value added contributions (55%), followed by *Environmental Horticulture* (45%), *Forestry and Forest Products Manufacturing* (30%), *Fishing and Seafood Products* (17%), *Grain and Oilseed Farming and Processing* (10%), and *Fruit and Vegetable Farming and Processing* (5%) (Figure 17). The *Sugarcane Farming, Refined Sugar and Confections*, suffered the greatest decline in value added impacts (-22%), followed by *Grain and Oilseed Farming, and, Processing* (-7%).

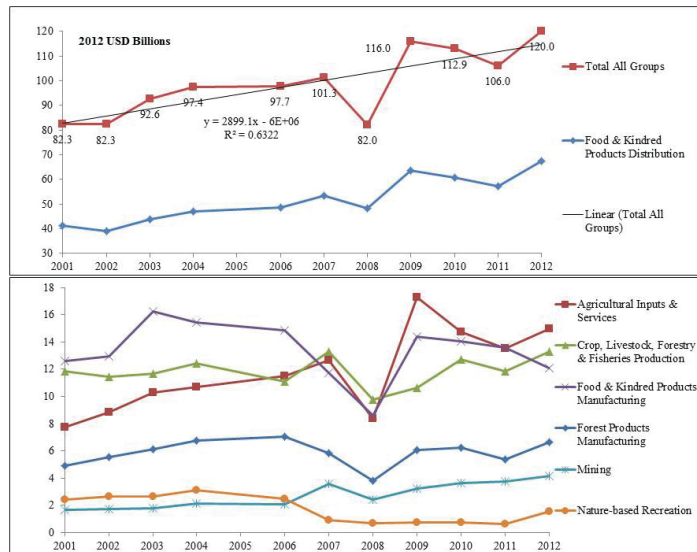

Figure 15. Trend in value added contributions by agriculture, natural resources and related food industries in Florida, 2001 to 2012. Note: data not available for 2005. Values expressed in 2012 dollars. Estimates include regional multiplier effects. Source: IMPLAN data for Florida

Individual industry sectors with average yearly growth rates in value-added impacts greater than 20 percent during 2001–2012 included *Mining iron ore* (30%), *Wet corn milling* (28%), *Tortilla manufacturing* (24%), and *Soybean and other oilseed processing* (23%). Across all industry groups in Florida, *Agriculture, Natural Resources and Related Food Industries* was among those that experienced positive growth in direct value added contributions between 2001 and 2012. Among seventeen major industry groups, those with the highest average annual growth in direct value added during this period were *Education* (6.3%); *Health Care and Social Services* (3.6%); *Government* (3.4%); *Professional and Technical Services* (3.2%); *Travel, Entertainment and Recreation* (2.9%); *Real Estate and Rentals* (2.7%); *Utilities* (2.7%); *Finance and Insurance* (2.5 %); *Retail trade* (2.1%); and *Agriculture, Natural Resources, and Related Industries* (2.0%).

## Conclusions

Agriculture and natural resource industries in Florida are linked to a broad array of economic activities, including commodity production, food and kindred product manufacturing, distribution, and related service activities. These industries collectively had a significant economic impact on Florida's economy in 2012, with direct employment accounting for about 14.4 percent of total state employment and direct value added representing 8.5 percent of Gross State Product. *Food and Kindred Products Distribution* was by far the largest segment of the industry group, representing 56 percent of value added and 61 percent of employment impacts. These industries are present throughout the state, with major activity in urbanized metropolitan areas, but are relatively more important as a share of total economic activity in rural counties. The agriculture, natural resources and related industries have grown substantially since 2001, interrupted in 2008 by the global recession, but continuing to recover in 2012, with total regional economic impacts buoyed by increased exports. Growth in economic activity of agriculture, natural resources, and related food industries during the past ten years was higher than many other major industry groups in Florida, thus contributing towards the stability and sustainability of the State's economy.
