The Florida Greenhouse Vegetable Production Handbook is edited by George Hochmuth, professor of Horticultural Sciences and Center Director, North Florida Research and Education Center and Bob Hochmuth, Extension Agent IV, North Florida Research and Education Center - Suwannee Valley, Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida, Gainesville, FL 32611.

#### Introduction - Florida Greenhouse Vegetable Production Handbook, Vol 1

#### Introduction

The production of greenhouse vegetables has increased in Florida during the 1980s and 1990s. Area in Florida counties under greenhouse vegetable production in 2001 is shown in Figure 1. A greater number of small operations exist in North Florida and fewer, but much larger operations exist in South Florida.

Figure 1. Greenhouse Vegetable Production in 2001.

Greenhouse operations have been viewed by many as a means to diversify and improve farm income. These new growers are trying to take advantage of vegetable crop production which, in general, has higher return per unit area than agronomic crops. In addition, greenhouse vegetable growers have recently been able to benefit from the increased demand for specialty horticultural crops, a category which encompasses greenhouse vegetables (Figure 2).

Greenhouse vegetable production is not easy nor should it be viewed as an easy solution to a particular individual's economic problems. The difficulties inherent in greenhouse vegetable production are

Figure 2. Newly transplanted tomatoes

reflected in the relatively few acres of greenhouse vegetables grown in the United States compared to field vegetables. In general, greenhouse vegetable production in the United States is located near urban areas to benefit from the larger market potential, near industrial power plants to take advantage of reduced power and heating costs, or they are located in areas of the country with year-round abundant sunshine, such as Colorado or Arizona.

Greenhouse vegetables cannot usually compete directly on a price basis in the same markets with field-grown vegetables. Greenhouse vegetable production is much more expensive and more intensive and the crops must be marketed as specialty produce. Since greenhouse production is very costly and intensive, and the market for the specialty items is volatile, the prospective grower must be keenly aware of the special and exacting requirements of greenhouse vegetable production. This publication presents the special considerations that must be understood by all new or perspective greenhouse vegetable growers. Each point should be considered in light of one's own particular personality, capability, and financial status. Careful consideration of these factors will help prevent the perspective grower from making a regretful decision.

### More Information

For more information on greenhouse crop production, please visit our Web site at http://nfrec-sv.ifas.ufl.edu.

For the other chapters in the Greenhouse Vegetable Production Handbook, see the documents listed below:

#### Introduction - Florida Greenhouse Vegetable Production Handbook, Vol 1

### Florida Greenhouse Vegetable Production Handbook, Vol 1

Introduction, HS 766

Financial Considerations, HS767

Pre-Construction Considerations, HS768

Crop Production, HS769

Considerations for Managing Greenhouse Pests, HS770

Harvest and Handling Considerations, HS771

Marketing Considerations, HS772

Summary, HS773

## Florida Greenhouse Vegetable Production Handbook, Vol 2

General Considerations, HS774

Site Selection, HS775

Physical Greenhouse Design Considerations, HS776

Production Systems, HS777

Greenhouse Environmental Design Considerations, HS778

Environmental Controls, HS779

Materials Handling, HS780

Other Design Information Resources, HS781

### Florida Greenhouse Vegetable Production Handbook, Vol 3

Preface, HS783

General Aspects of Plant Growth, HS784

Production Systems, HS785

Irrigation of Greenhouse Vegetables, HS786

Fertilizer Management for Greenhouse Vegetables, HS787

Production of Greenhouse Tomatoes, HS788

Generalized Sequence of Operations for Tomato Culture, HS789

Greenhouse Cucumber Production, HS790

Alternative Greenhouse Crops, HS791

**Operational Considerations for Harvest, HS792** 

Enterprise Budget and Cash Flow for Greenhouse Tomato Production, HS793

Vegetable Disease Recognition and Control, HS797

Vegetable Insect Identification and Control, HS798
