**Introduction**

Variegated century plant is common in cultivation, having twisted green leaves with marginal bands of bright yellow (Figure 1). The leaves gracefully fold back on themselves giving the appearance of giant bands of striped ribbon. Its tight rosette of stiff, sword-shaped leaves, each up to six feet long and 10 inches wide, makes a dramatic statement in the landscape and is much favored for use in rock gardens. The sharp spine at the tip of its toothed leaves is often removed to protect people and pets. Locate it at least six feet away from walks and other areas where people could contact the spiny foliage.

**General Information**

| Scientific name: | *Agave americana* ‘Marginata’ |
| Pronunciation: | uh-GAW-vee uh-mair-rick-KAY-nuh |
| Common name(s): | Variegated century plant |
| Family: | Agavaceae |
| Plant type: | shrub |
| USDA hardiness zones: | 9 through 11 (Figure 3) |
| Planting month for zone 9: | year-round |
| Planting month for zone 10 and 11: | year-round |
| Origin: | native to North America and Mexico |
| Invasive potential: | not considered a problem species at this time and may be recommended by UF/IFAS faculty (reassess in 10 years) |
| Uses: | border; accent; mass planting |

Agave americana 'Marginata' Variegated Century Plant

**Availability:** somewhat available, may have to go out of the region to find the plant

**Figure 3.** Shaded area represents potential planting range.

### Description

- **Height:** 6 to 8 feet
- **Spread:** 6 to 10 feet
- **Plant habit:** round
- **Plant density:** open
- **Growth rate:** slow
- **Texture:** coarse

### Foliage

- **Leaf arrangement:** spiral
- **Leaf type:** simple
- **Leaf margin:** spiny
- **Leaf shape:** lanceolate
- **Leaf venation:** none, or difficult to see
- **Leaf type and persistence:** evergreen
- **Leaf blade length:** more than 36 inches
- **Leaf color:** variegated
- **Fall color:** no fall color change
- **Fall characteristic:** not showy

### Flower

- **Flower color:** white
- **Flower characteristic:** summer-flowering

### Fruit

- **Fruit shape:** oval
- **Fruit length:** 1 to 3 inches
- **Fruit cover:** dry or hard
- **Fruit color:** brown
- **Fruit characteristic:** persists on the plant

### Trunk and Branches

- **Trunk/bark/branches:** not particularly showy; usually with one stem/trunk
- **Current year stem/twig color:** not applicable
- **Current year stem/twig thickness:** not applicable

### Culture

- **Light requirement:** plant grows in part shade/part sun
- **Soil tolerances:** alkaline; clay; sand; acidic; loam
- **Drought tolerance:** high
- **Soil salt tolerance:** unknown
- **Plant spacing:** 36 to 60 inches

### Other

- **Roots:** usually not a problem
- **Winter interest:** no special winter interest
- **Outstanding plant:** plant has outstanding ornamental features and could be planted more
- **Pest resistance:** no serious pests are normally seen on the plant

### Use and Management

Century plant is a hardy survivor, tolerating heat, drought, and salty seaside conditions. It grows best in full sun but can adapt to shade. After 10 years or more (though not a century), a lofty flower spike is produced, sometimes reaching a height of 20 feet or more, with terminal panicles of pale yellow to white blooms. The plant dies after blooming. The plant is typically used in residences as a free-standing specimen, not planted in mass. Due to its large size, most residences only need one of these. Larger commercial landscapes have room for multiple mass plantings which can create a dramatic impact.

Variegated century plant is propagated by detaching the well-rooted suckers appearing at the base, or by plantlets formed on the flower spike.

### Design Considerations

The bold form, coarse texture, and dramatic color of the variegated century plant make it perfect as a specimen plant in highly visible spaces in the landscape. Use with companion plants that are softer, with small foliage and mounding or spreading forms to contrast and highlight the stiff upright form of the leaves. Pairing with plants that have more texture in the foliage will also contrast with the smooth, stiff leaves. To highlight the bright yellow bands in the leaves use dark green foliage or plants with small to medium flowers with cool bright colors, such as purples and blues. Another option is to complement the yellow with
golden-colored, wispy grasses. Large masses of low-growing companion plants around the base or in front of the century plant will create a nice setting to show off the form.

**Pests and Diseases**

No pests or diseases are of major concern.
