**Ipomoea pes-caprae** Beach Morning Glory

Edward F. Gilman

**Introduction**

The beach morning glory is an herbaceous vine that grows wild on ocean shores from Florida to Texas and Georgia (Fig. 1). This plant reaches a height of 4 to 6 inches, but the stems may creep along the ground to a length of 75 feet. It roots and occasionally branches from the nodes and develops a long, thick, starchy root. The 2 1/2- to 4-inch-long leaves are thick, smooth and two-lobed; the leaf shape reminds one of a goat's footprint, or perhaps an orchid tree leaf. The beach morning glory is truly charming when in bloom. Funnel-shaped flowers that are 2 1/2 to 3 inches wide occur in the summer and fall. The flowers are pinkish lavender with purple red throats. They open in the early morning and close before noon each day that the plant is in bloom. Small, round seedpods that contain four velvety, dark brown seeds appear on this plant after flowering.

**General Information**

**Scientific name:** Ipomoea pes-caprae  
**Pronunciation:** ipp-oh-MEE-uh pess-kuh-PREE  
**Common name(s):** railroad vine, beach morning glory

**Family:** Convolvulaceae  
**Plant type:** ground cover  
**USDA hardiness zones:** 10B through 11 (Fig. 2)  
**Planting month for zone 10 and 11:** year round  
**Origin:** native to Florida

Figure 2. Shaded area represents potential planting range.

**Uses:** ground cover

**Availability:** somewhat available, may have to go out of the region to find the plant

**Description**

**Height:** depends upon supporting structure

**Spread:** depends upon supporting structure

**Plant habit:** spreading; prostrate (flat)

**Plant density:** moderate

**Growth rate:** fast

**Texture:** coarse

**Foliage**

**Leaf arrangement:** alternate

**Leaf type:** simple

**Leaf margin:** lobed

**Leaf shape:** elliptic (oval)

**Leaf venation:** pinnate

**Leaf type and persistence:** evergreen

**Leaf blade length:** 2 to 4 inches

**Leaf color:** green

**Fall color:** no fall color change

**Fall characteristic:** not showy

**Flower**

**Flower color:** purple

**Flower characteristic:** summer flowering; fall flowering

**Fruit**

**Fruit shape:** round

**Fruit length:** less than .5 inch

**Fruit cover:** dry or hard

**Fruit color:** unknown

Ipomoea pes-caprae  Beach Morning Glory

**Fruit characteristic:** inconspicuous and not showy

**Trunk and Branches**

**Trunk/bark/branches:** not applicable

**Current year stem/twig color:** green

**Current year stem/twig thickness:** thick

**Culture**

**Light requirement:** plant grows in full sun

**Soil tolerances:** acidic; alkaline; sand; loam;

**Drought tolerance:** high

**Soil salt tolerances:** good

**Plant spacing:** 24 to 36 inches

**Other**

**Roots:** not applicable

**Winter interest:** plant has winter interest due to unusual form, nice persistent fruits, showy winter trunk, or winter flowers

**Outstanding plant:** not particularly outstanding

**Invasive potential:** aggressive, spreading plant

**Pest resistance:** no serious pests are normally seen on the plant

**Use and Management**

The beach morning glory is well adapted to beaches and coastal dunes. It is useful as a sand binder and ground cover, even on the ocean side of the first dune. They grow right down to the high tide mark on the beach. Plant on 3-foot centers to quickly form a ground cover. It may not be well suited for home landscapes because it grows too quickly and has a very open growth habit.

This full sun plant will prosper on most well-drained soils. It grows very rapidly and needs to be pruned and contained if planted in a landscape. To say the plant grows quickly is to preach the truth. The beach morning glory will tolerate very high levels of salt spray but cannot endure over watering. Basically, plant it, water a few times and leave the sprinkler off.

**Pests and Diseases**

No pests or diseases are of major concern.
