The Chinese *Andraca* is revised with the check-list annotated. A new bombycid geographic subspecies, *Andraca nobilorum houtuae* Wang & Zolotuhin **subsp. nov.**, is described from Damingshan National Nature Reserve, South China. The new subspecies differs from the nominate *A. nobilorum* in Central Vietnam by the darker marker at the apex of the forewing indistinct but prominent in the holotype of *A. nobilorum*, and its male genitalia with the apex of valva slenderer and pointed. A key to the Chinese *Andraca* species and *Pseudandraca flavamaculata*, and the distributional maps are given. The male holotype specimen of the new subspecies is deposited in SCAU (South China Agricultural University, Guangzhou, China).

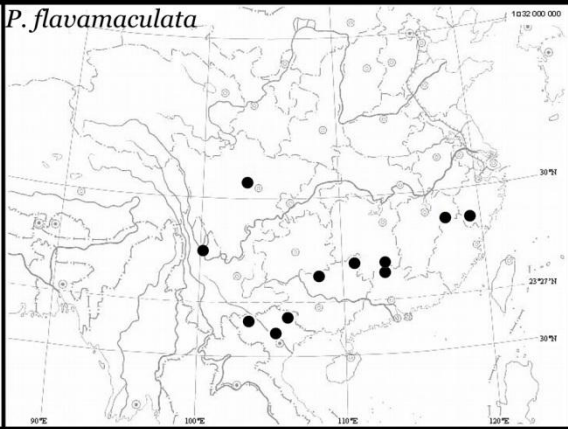

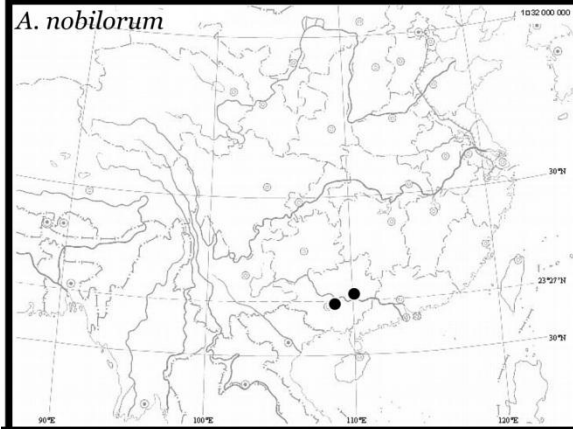

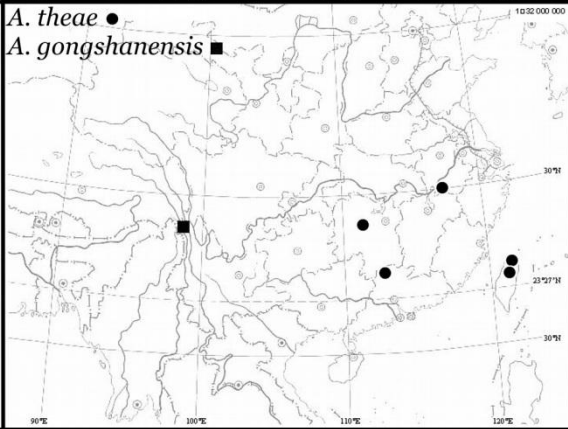

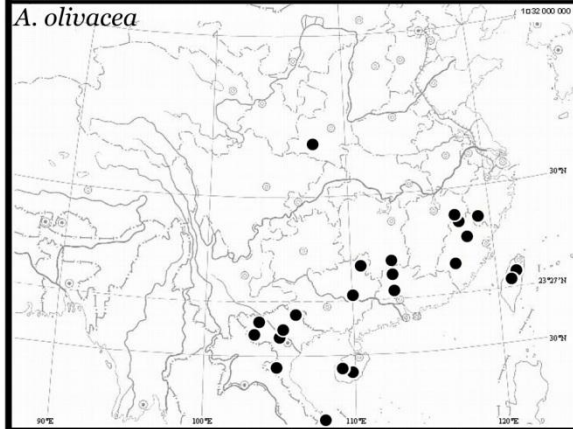

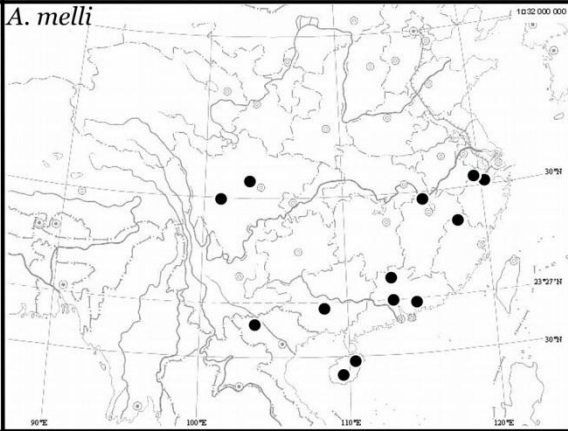

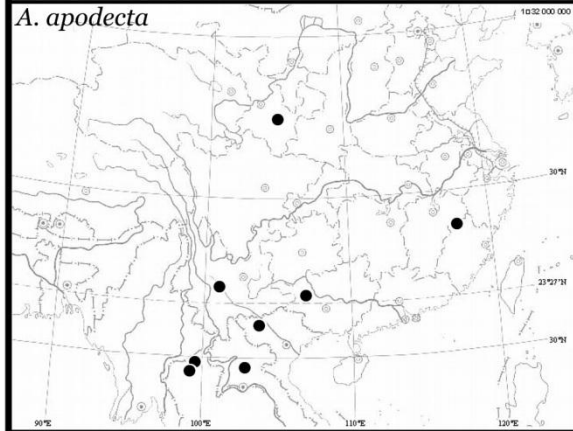

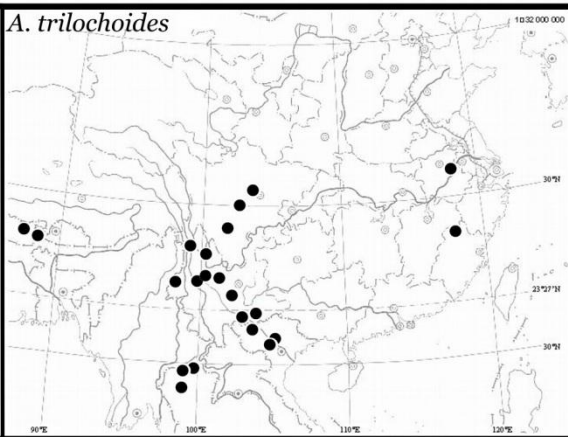

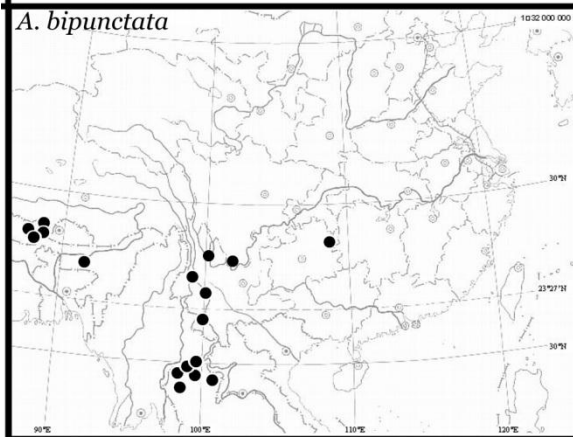

Fig.1. Distribution maps of *Andraca* spp. and *Pseudandraca flavamaculata* in China.

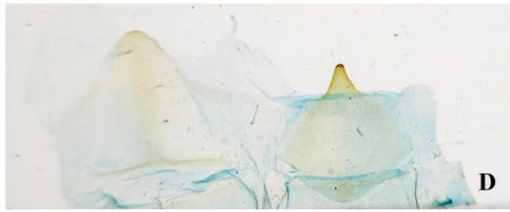

Fig. 2. *Andraca* spp.. A, D, F. *A. nobileorum nobileorum* Zolotuhin, 2012, male, Holotype (A. Adult; D. Abdomen; F. Genitalia); B-C, E, G. *A. nobileorum houtuae* Wang & Zolotuhin **subsp. nov.** male, Holotype (B. Adult, upperside; C. Adult, underside; E. Abdomen; G. Genitalia); H. *A. olivacea* from Baishanzu Mts.; I. *A. theae* from Taiwan, the lectotype.
