**COASTAL PHOTOGRAPH BY DAVID DE MAY**

---

**PHOTO8.** St. James Bay, Islas Santiago, Galapagos Islands. Marine terrace, now uplifted, cut in horizontally bedded sedimentary deposits. The marine biological and subaerial weathering of strata with different lithologies and strength (hardness) have produced an array of coastal forms that almost resemble Gothic architecture.

[David De May: St Thomas University, Department of Biology, 16400 NW 32nd Avenue, Miami, FL 33053, USA. Photography — August 1983]
