

COASTAL PHOTOGRAPH BY R.W.G. CARTER

PHOTO 20. The cliffs of Moher, County Clare in the Republic of Ireland. The horizontal carboniferous shales form vertical cliff faces over 250 m high (note people on cliff top for scale). The cliff faces display evidence of minor rock falls, although the overall erosion rate is too small to be measured. [R.W.G. Carter, Environmental Science, University of Ulster, Coleraine, Northern Ireland BY52 1SA]
