
COASTAL PHOTOGRAPH BY ANDREW D. SHORT

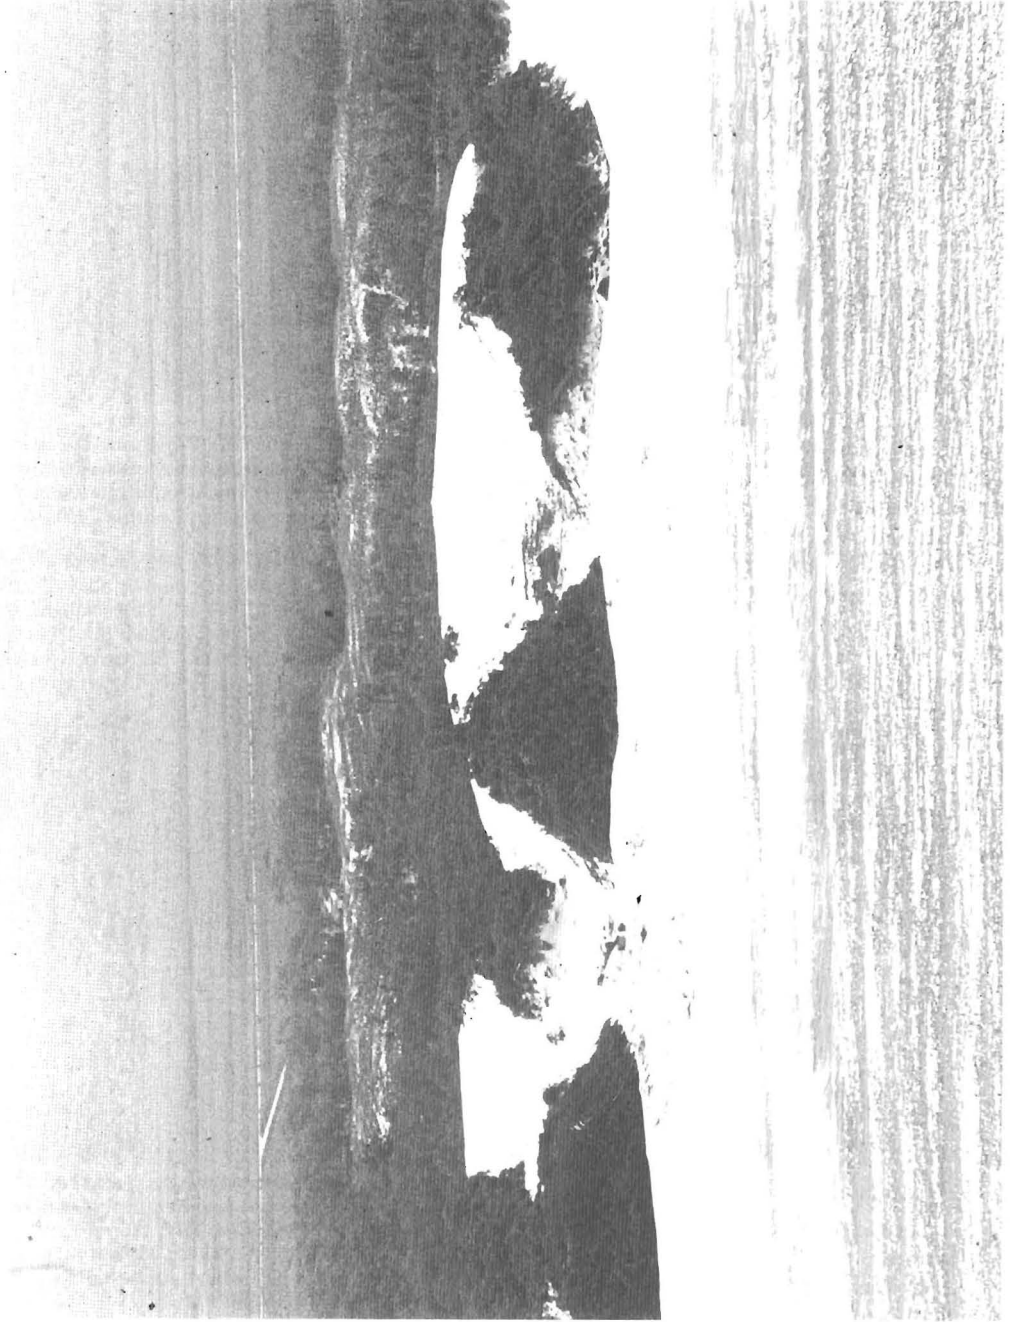

PHOTO 104. Three large blowouts in the 20 m high foredune in Eurrunderee embayment, central New South Wales coast. These blowouts have been active for at least 800 years and represent the fourth phase of major Holocene dune activity on this section of coast. (9 August 1988, A. D. Short, University of Sydney, New South Wales, Australia).
