

Fig. 3

# ELEVATION OF THE LOW PO AND VENETO-FRIULI PLAINS

appendix to: COASTAL AREAS AT RISK FROM STORM SURGES AND SEA-LEVEL RISE IN NORTHEASTERN ITALY

M. Bondesan, G.B. Castiglioni, C. Elmi, G. Gabbianelli, R. Marocco, P.A. Pirazzoli and A. Tomasin

Journal of Coastal Research, 11 (4), 1995

scale 1:500,000

- areas at elevations above +2 m
- areas at elevations between +2 and 0 m
- areas at elevations between 0 and -2 m
- areas at elevations below -2 m

The present map, published with financial support from the European Commission (contract DG XII-EV5V-CT93-0266), is a simplified reduction from the new geomorphological map of the Po Plain, prepared by a large group of geomorphologists, members of various universities and of the National Research Council (Venice); *Carta Geomorfologica delle Pianure Padane*, scale 1:250,000 in 3 sheets (edited by G.B. Castiglioni, Padua), which will be published in 1996 by S.ELCA, - Florence.

The preparation of the 1:250,000 map was sponsored by the Italian Ministry of Universities and Scientific Research, National Project "Geomorfologia ed evoluzione recente della Pianura Padana" and later national projects, from 1986 to the present.

Authors of the present section of the altimetric map: V. Favari, research unit of Venice; M. Bondesan & M.C. Tumini, research unit of Ferrara; C. Elmi & G. Giorgi, research unit of Bologna; A. Cavallin, research unit of Milan; G.B. Castiglioni, M. Pellegrini, M. Meneghel & V. Tonello, research unit of Padua.

Source of the contour lines: processing of new altimetric data from the Carta Tecnica Regionale, Emilia-Romagna, Veneto and Friuli-Venezia Giulia, scales 1:5,000 and 1:10,000.
