

Oregon Inlet, North Carolina. View looking north on 31 October, 1991 during the height of the "Halloween" storm. The ebb shoal is well defined by the rare (for the east coast) 5 m, 22 sec waves. Oregon Inlet, which separates Bodie Island (above) from Pea Island, opened in 1846 almost 4 km north of its present position where the shoreline is offset (background) to the west.
