
COASTAL PHOTO BY PER BRUNN

Vegetated Dunes on the Skagen Spit, Denmark. This old dune line (photo background) marks the approximate location of a paleoshoreline on the Skagen spit about 2000 years ago. Destabilized parts of the dune line migrate northwards at a rate of about $5\text{--}8\text{ m yr}^{-1}$. (Photo provided by Per Bruun, Winter 1997)
