### CONTENTS

**JOURNAL OF NEMATOLOGY**

**Vol. 47, No. 3**  
**September 2015**

### Research Note

Zahra Tashha Maafi and Zahra Majd Taheri ......................................................... 167

### Contributed Papers

#### Molecular Biology

Molecular Characterization of *Meloidogyne christiei* Golden and Kaplan, 1986 (Nematoda, Meloidogynidae)  
Topotype Population Infecting Turkey Oak (*Quercus laevis*) in Florida.  
Janete A. Brito, Sergei A. Subbotin, Hyerim Han, Jason D. Stanley, and Donald W. Dickson .......................................................... 169

#### Entomopathogenic Nematodes

Sex Attraction and Mating in *Bursaphelenchus okinawaensis* and *B. xylophilus*.  
Ryoji Shinya, Anthony Chen, and Paul W. Sternberg ........................................... 176

Viability and Virulence of Entomopathogenic Nematodes Exposed to Ultraviolet Radiation.  
David I. Shapiro-Ilan, Selcuk Hazir, and Luis Lete .................................................. 184

#### Taxonomy

A New Species of *Pristionchus* (Rhabditida: Diplogastridae) and Its Bacterial Symbiont from Yixing, China.  

Marine Nematode Taxonomy in Africa: Promising Prospects Against Scarcity of Information.  
Fehmi Boufahja, Federica Semprucci, Hamouda Beyrem, and Punyasloke Bhadury ......................... 198

#### Biological Control

**Pasteuria penetrans** for Control of *Meloidogyne incognita* on Tomato and Cucumber, and *M. arenaria* on Snapdragon.  
Nancy Kokalis-Burelle .................................................................................................. 207

Potential of Sahelian Native Shrub Materials to Suppress the Spiral Nematode *Helicotylenchus dihystera*.  
.......................................................... 214

#### Miscellaneous

Abstracts from the Society of Nematologists Annual Meeting 2014 .......................... 218

---

Meloidogyne christiei infects Turkey oak producing nodule-like galls (refers to Fig. 1) and unique tubular-shaped egg mass (Fig. 2).
Cover—Fig. 1. Roots collected from Turkey oak infected with Meloidogyne christiei. Note the typical root-galling symptom, known as a nodule-like gall, and clusters on one side of the roots. Fig. 2. A close-up view of the tubular and coiled egg mass produced by Meloidogyne christiei in Turkey oak (Quercus laevies).
