Insecta Mundi is a journal primarily devoted to insect systematics, but articles can be published on any non-marine arthropod taxon. Manuscripts considered for publication include, but are not limited to, systematic or taxonomic studies, revisions, nomenclatural changes, faunal studies, book reviews, phylogenetic analyses, biological or behavioral studies, etc. **Insecta Mundi** is widely distributed, and referenced or abstracted by several sources including the Zoological Record, CAB Abstracts, etc.

As of 2007, **Insecta Mundi** is published irregularly throughout the year, not as quarterly issues. As manuscripts are completed they are published and given an individual number. Manuscripts must be peer reviewed prior to submission, after which they are again reviewed by the editorial board to insure quality. One author of each submitted manuscript must be a current member of the Center for Systematic Entomology.

Abstract. *Curius chemsaki* Nearn and Ray, 2006 (Coleoptera: Cerambycidae: Cerambycinae: Curiini), is reported from Colombia for the first time. In addition, the range of this taxon within Venezuela is extended to the Andean Province of Táchira.

Introduction

Curius chemsaki Nearn and Ray, 2006 was described from 23 specimens collected in Aragua Province, Venezuela. A color habitus photograph of the holotype deposited at the National Museum of Natural History, Smithsonian Institution (USNM), was provided by Lingafelter et al. (2009). Nearn & Branham (2008) conducted a revision and phylogenetic analysis of the tribe Curiini and extended the known range of *C. chemsaki* within Venezuela to Mérida Province.

Specimens of *C. chemsaki* deposited in the insect collection at the Universidad Central de Venezuela (UCV) were overlooked by previous authors. Based on specimens deposited in UCV, the known distribution of *C. chemsaki* within Venezuela is now extended to the Andean province of Táchira: 1 female, La Grita, 2300 m, 25 June 1984, C. Bordón. Three additional specimens from Mérida Province are also deposited in the UCV: 1 male, La Mucuy, 2300 m, 13 August 1978, C. Bordón; 1 female, same data, except 6 August 1984; 1 female, Santa Rosa, 23 January 1993, L.D. Otero.

A single male specimen of *C. chemsaki* collected in Colombia was recently discovered in the Essig Museum of Entomology Collection (EMEC), University of California, Berkeley, CA, U.S.A. The collection data for this specimen is: Colombia, Norte de Santander Province, 2300 m, 25 km. S. Chinacota, 14 May 1974, H. & A. Howden. This is the first published record for *C. chemsaki* in Colombia and the first time it has been collected outside of Venezuela. The specimen falls within the known morphological variation for this species.

Acknowledgments

We appreciate assistance from Cheryl Barr (Essig Museum of Entomology Collection) for access to the Colombia specimen. We also thank Kelly B. Miller (University of New Mexico) and Nathan P. Lord (University of New Mexico) for critical suggestions to improve an earlier version of this manuscript.
