Insecta Mundi is a journal primarily devoted to insect systematics, but articles can be published on any non-marine arthropod. Topics considered for publication include systematics, taxonomy, nomenclature, checklists, faunal works, and natural history. **Insecta Mundi** will not consider works in the applied sciences (i.e. medical entomology, pest control research, etc.), and no longer publishes book reviews or editorials. **Insecta Mundi** publishes original research or discoveries in an inexpensive and timely manner, distributing them free via open access on the internet on the date of publication.

Insecta Mundi is referenced or abstracted by several sources including the Zoological Record, CAB Abstracts, etc. **Insecta Mundi** is published irregularly throughout the year, with completed manuscripts assigned an individual number. Manuscripts must be peer reviewed prior to submission, after which they are reviewed by the editorial board to ensure quality. One author of each submitted manuscript must be a current member of the Center for Systematic Entomology.

Abstract. Curculionoidea (Coleoptera) of the West Indian island of Dominica are composed of 111 genera and 214 species and subspecies. Some of the species listed are morphospecies, or are known to be undescribed, but all are identified at least to genus. Previously the fauna was recorded as 31 species. Numbers presented herein represent a seven-fold increase in species diversity. Furthermore, the widespread nature of many species demonstrates that the supposedly endemic faunas of many West Indian islands may be based on collecting biases or a lack of people capable of providing species level identifications.

Introduction

Dominica is known as the “nature island” of the Caribbean due to its spectacular, lush, and varied flora and fauna, much of which is protected by an extensive national park system. Although dwarfed in size by the French islands of Martinique and Guadeloupe, each with more than 1000 square miles, Dominica, with 289 square miles, is the third largest and second most mountainous of the Leeward Islands of the Lesser Antilles.

The Curculionoidea (Coleoptera) of Dominica are poorly known. Only 31 species from 24 genera and six families have heretofore been recorded from this island nation (O'Brien and Wibmer 1982; Clark 1993; Valentine 2003; Peck 2006; Anderson 2008; Prena 2009). By comparison, 343 species have been recorded from neighboring Guadeloupe. However, the relatively large fauna of Curculionoidea known from Guadeloupe may be the result of extensive collecting efforts begun in the 1800s and continuing to the present day by residents and others such as F. Lherminier, M. Delauney, M. Vitrac, J. Bonfils, R. Benard and F. Chalumeau. One hundred and thirty-one species of Curculionidae (excluding the Scolytinae) were documented as occurring in the Guadeloupe archipelago as early as 1889 (Fleutiaux and Sallé 1889). Studies of resulting collections housed in the Paris Museum by Hustache (1929, 1930, 1932) added a great many species to the fauna known from this island group. By comparison, most of the other islands in the Lesser Antilles, including Dominica, have received much less collecting effort and study. As a result, the numbers of known species from individual islands and apparent levels of endemism may in part be the result of limited collecting effort and study, and not a true reflection of nature and structure of the fauna.

Materials and Methods

The results of collecting expeditions to Dominica by COB and Dr. Lois B. O'Brien in August, 1986 and by the O'Brien's and RHT in June, 2004 are presented here. Supplemental records from the C. W. O'Brien Collection and the Texas A&M University Collection are also included. These trips totaled not more than one month of field time, yet increased the total number of species and genera in Dominica as follows for each family of Curculionoidea (excepting Scolytinae of the Curculionidae and Platypodidae): Anthribidae 8 genera, 9 species; Rhynchitidae 1 genus, 1 species; Brentidae 4 genera, 4 species; Apionidae 1 genus, 1 species; Dryophthoridae 8 genera, 12 species; Eirrhinidae 1 genus, 1 species; Curculionidae (excepting Scolytinae) 87 genera, 187 species, for a total of 111 genera and 214 species.

The arrangement of the list and higher classification follows Alonso-Zarazaga and Lyal (1999). The distribution of species is presented after each species name. Label data are presented in chronological

order of collection under species headings. Data are reported largely verbatim. Minor emendations have been made to correct spelling errors and to standardize format. Codens used for specimen depositories are **CWOB** for the C. W. O'Brien Collection; **RHTC** for the Robert H. Turnbow, Jr. Collection; **TAMU** for the Texas A & M University Collection; and two from recent publications, **CMNC** the Canadian Museum of Nature and **USNM** the National Museum of Natural History, Smithsonian Institution.

Comments

Peck (2009) indicated that the diverse fauna of beetles in the Lesser Antilles is remarkably poorly known and has predicted that many hundreds (if not thousands) of beetle species remain to be discovered. Our compilation supports this contention. Clearly, much additional focused collecting and study by specialists is required. As now understood, the relationships of the Curculionoidea fauna of Dominica to that of the other islands of the Lesser Antilles and adjacent land masses are shown in Table 1.

Acknowledgments

We thank Dr. Eric Hypolite, Director of the Division of Forestry, Wildlife & Parks (Agriculture); Mr. Ryan Anselm, Agriculture Division, and Mr. Arlington James, Forest Officer, Forestry, Wildlife & Parks Division, Botanical Gardens for authorizing and issuing collecting and export permits for our 2004 visit to the island. Ms. Naomi Commodore of the Agriculture Division provided valuable assistance in the field during our 2004 visit. Mr. Edward G. Riley, Collections Manager, Department of Entomology, Texas A&M University kindly arranged loans of specimens in his care. Mrs. Sylvia Joseph Baptiste and her husband Jeffrey Baptiste assisted with information and contacts for securing permits. Critical reviews by

Robert S. Anderson and Nico M. Franz resulted in significant improvements to an earlier draft of the manuscript.
