Insecta Mundi is a journal primarily devoted to insect systematics, but articles can be published on any non-marine arthropod. Topics considered for publication include systematics, taxonomy, nomenclature, checklists, faunal works, and natural history. Insecta Mundi will not consider works in the applied sciences (i.e. medical entomology, pest control research, etc.), and no longer publishes book reviews or editorials. Insecta Mundi publishes original research or discoveries in an inexpensive and timely manner, distributing them free via open access on the internet on the date of publication.

Insecta Mundi is referenced or abstracted by several sources, including the Zoological Record and CAB Abstracts. Insecta Mundi is published irregularly throughout the year, with completed manuscripts assigned an individual number. Manuscripts must be peer reviewed prior to submission, after which they are reviewed by the editorial board to ensure quality. One author of each submitted manuscript must be a current member of the Center for Systematic Entomology.

Guidelines and requirements for the preparation of manuscripts are available on the Insecta Mundi website at http://centerforsystematicentomology.org/insectamundi/

**Abstract.** *Coniopteryx tineiformis* Curtis (Neuroptera: Coniopterygidae) is reported from Pennsylvania for the first time, a new state record. The Pennsylvania Department of Agriculture's collection holdings were reviewed and four specimens from two counties were found. These records fill in a gap in this species' reported range, despite no records of it from adjacent states.

**Key words.** Dustywings, new record.

**Introduction**

A recent checklist for Coniopterygidae (Neuroptera) updated the distribution of this group for North America north of Mexico (Ferro 2018). Five species were reported from Pennsylvania. The Pennsylvania Department of Agriculture's collection of over 300 specimens was reviewed against this checklist. From this, records of *Coniopteryx tineiformis* Curtis from Pennsylvania were found from two counties, filling in a range gap for this species.

**Materials and Methods**

Four specimens are reported from the collection of the Pennsylvania Department of Agriculture (PADA). Label data are not verbatim but were stylized for clarity and accuracy.

All specimens were verified by T. J. Henry during 1973 (three earliest collections) or 1975 (final collection).

**Results**

The presence of *Coniopteryx tineiformis* in Pennsylvania is not surprising as it has a wide distribution across North America, from California to Alaska, eastwards to Virginia and Newfoundland and Labrador (Ferro 2018). Pennsylvania currently does not border any state or territory that has also reported this species, but, as mentioned in the Ferro checklist, this is more likely an artifact of under-reporting and collecting of dustywings.

**Acknowledgments**

The author would like to thank all those who invest the time and energy into making and updating checklists, and thereby providing the basis for so many scientific endeavors to be launched. The author also thanks Claire M. Ciafré and Michael L. Ferro for revisions to this manuscript.
