

A revision of the genus *Anisostena* Weise  
 (Coleoptera: Chrysomelidae, Hispinae).  
 Part III. The pilatei species group

C. L. Staines  
 3302 Decker Place  
 Edgewater, Maryland 21037 U.S.A.

## Abstract

The pilatei species group of *Anisostena* s. str. is revised. Lectotypes are designated for *A. nunenmacheri*, *A. pilatei*, and *A. trilineata*; *A. mitchelli* is synonymized with *A. arizonica*; *A. confusa* and *A. vittata* are described as new.

**Key words:** Anisostena, lectotype, revision, new species.

## Introduction

This is the third in a series of articles revising the genus *Anisostena*. The first article (Staines, 1993) summarized the work on the genus and revised the subgenera *Neostena* and *Apostena*. The second article (Staines, 1994) divided the subgenus *Anisostena* s. str. into three species groups and revised the ariadne species group.

Types were examined for all species except *A. scapularis*. Lectotypes are designated for *A. nunenmacheri*, *A. pilatei*, and *A. trilineata*. In recording the label data from type specimens, a slash (/) divides data on different labels.

Measurements were taken with an ocular micrometer. Pronotal length and width were taken along the midlines. Elytral width was measured at the humeri. Elytral length was measured from the base to apex. Total length was measured from the base of the frontal sulcus to the apex of the elytra.

## The pilatei species group

Members of the pilatei species group are distinguished by the vittate or maculate elytra. Members of this species group are known from Kansas to Argentina.

## Key to the species of the pilatei group

1. Elytra vittate ..... 4  
 Elytra maculate ..... *scapularis* Uhmann

2.	Pronotum with basal impression.....	3
	Pronotum without basal impression .....	6
3.	Vertex of head punctate ..... <i>trilineata</i> (Baly)	
	Vertex of head not punctate .....	4
4.	Antennal segment III distinctly longer than II .	
	..... <i>vittata</i> New Species	
	Antennal segments II and III subequal in length .....	5
5.	Pronotum wider than long .....	
	<i>pilatei</i> (Baly)	
	Pronotum longer than wide .....	
	..... <i>promta fasciata</i> Maulik	
6.	Antennal segment II longer than III .....	
	..... <i>suturalis</i> (Weise)	
	Antennal segment III longer than II.....	7
	Antennal segments II and III subequal in length .....	8
7.	Faint longitudinal sulcus on pronotal disc; vertex of head with median sulcus; pronotum longer than wide .....	
	<i>nunenmacheri</i> (Weise)	
	Pronotum without longitudinal sulcus; vertex of head without sulcus; pronotum wider than long .....	
	<i>gracilis</i> (Horn)	
8.	Head with median sulcus faint; punctures present near eyes; pronotum longer than wide .....	
	..... <i>promta promta</i> (Weise)	
	Head with median sulcus distinct; no punctures near eyes; pronotum wider than long .....	9

9. Mesofemur serrate; antennal segment II wider than III; frons projecting .....  
*confusa* New Species  
 Mesofemur not serrate; antennal segments II and III same width; frons not projecting .....  
*arizonica* Schaeffer

### *Anisostena arizonica* Schaeffer

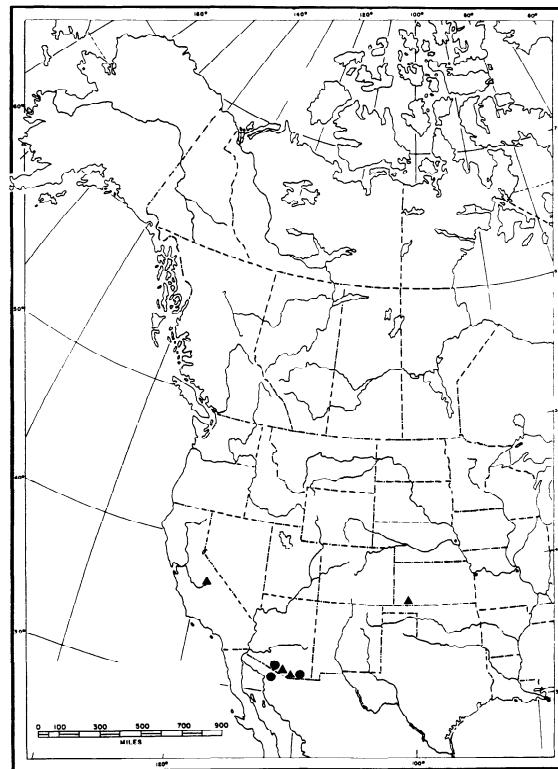

#### Map 1

*Anisostena arizonica* Schaeffer 1933:103. Holotype: Ari[zona]/ arizonica Schaeffer Coll. Holotype, 1935 Barber/ Charles Schaeffer Collection/ HS Barber Bequest 1950/ *Anisostena arizonica* Schaeffer (USNM). Papp 1953:58; Uhmann 1957:73; Wilcox 1975:140.

*Anisostena mitchelli* White 1939:55; Papp 1953:59; Uhmann 1957:74; Wilcox 1975:140. NEW SYNONYMY.

**Description:** Body color brown with dark sutural vitta. Head: median sulcus present; sulcus on inner margin of each eye; vertex micropunctate. Antennae brown, segments I-III lighter than rest; segment I subglobose; segments II- III cylindrical, subequal in width and length; IV-X transverse, VII-X wider than preceding; XI pointed at apex; frons projecting at base of antennae; frons punctate; apical margin of clypeus darkened; sides of head alutaceous. Pronotum: apical margin black; alutaceous between punctures; covered with large, shallow punctures; margined laterally; basal margin bisinuate; longer than wide; basal impression absent; lateral margins divergent from base to apex; no tooth in anterior angles; length 0.7 mm (n=4); width 0.7-0.9 mm (avg. 0.8). Scutellum: black; quadrate; alutaceous. Elytra: sutural vitta reaches puncture row 1; scutellar row of 3 punctures; elytral punctures in adjacent rows overlap or touch; lateral and apical margins smooth; apices individually rounded; intervals 2, 4, and 6 costate, interval 6 most pronounced; intervals 2 and 6 unite on apical fifth, 4 does not attain union by the diameter of three punctures; length 2.4-2.8 mm (avg. 2.6); width 1.0-1.3 mm (avg. 1.1). Legs: brown; tibia with ring of setae at apex; femur darker at apex, mesofemur not serrate on inner margin; last tarsal segment dark. Venter: prosternum brown; meso-, and metasterna black, alutaceous; abdomen brown. Total length: 3.6 mm (avg. 3.4).

**Larval host plant:** unknown.

Map 1. Distribution of *Anisostena* species: *arizonica* (triangles), *nunenmacheri* (squares).

**Distribution:** Arizona, California, and Mexico.

**Specimens examined:** MEXICO: Nuevo Leon: 29 km W. Linares, 2400 ft., 3-VI- 1983 (ISAC). UNITED STATES: Arizona: no further data (USNM). Pima Co.- Arivaca, 26- VII-1941 (SEMC). St. Cruz Co.- 3 mi. E Pena Blanca, 19-20-VII-1978 (AJGC); Ruby, 13- VII-1940 (SEMC); Sycamore Can., 4000, 11-IV-1970 (USNM). California: Inyo Co.- Lone Pine, 2-V-1937 (CASC). Kansas: Barbour Co.- 1468 ft., 1916 (SEMC). Texas Jeff Davis Co.- H. O. Canyon, Davis Mts., 5-VII-1968, 6200 ft. (TAMU). Total: 11.

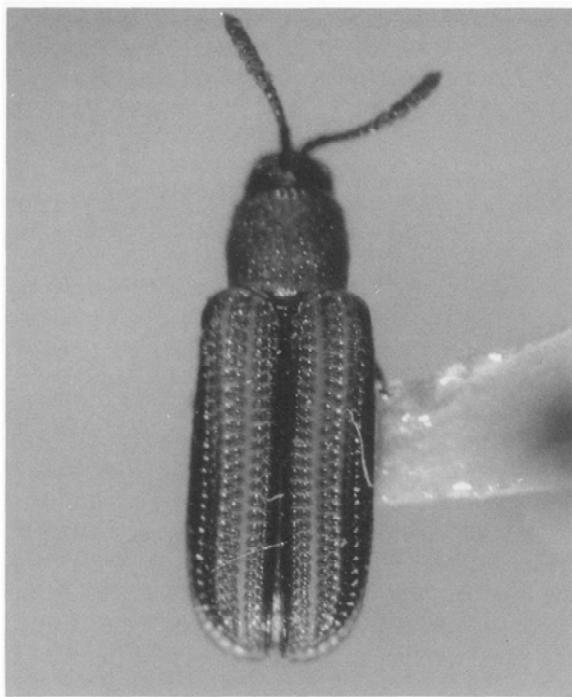

Specimens collected in dry oak forest.

### *Anisostena confusa* new species

#### Map 2

#### Figure 1

**Types:** Holotype: Guayana Francesa/ F. Monros Collection 1959/ Holotype *Anisostena confusa* Staines, det. C. L. Staines 1990 (red label) (USNM). Paratype (male):

**Figure 1.** Habitus of *Anisostena confusa*.

Ecuador: Guayas Prov., San Antonio, sea level, 3 km S Manglaralto, 12 Feb. 1987, K. A. Johnson colr./Paratype *Anisostena confusa* Staines, det. C. L. Staines 1989 (red label) (CLS). Paratype: Venezuela, Bolívar, 520 Guri Dam, 16-XI-1974, M. Murlaugh/ Paratype *Anisostena confusa* Staines, det. C. L. Staines 1989 (red label) (DEFW). Paratype: Mexico: Morelos, 4.4 mi. E. Cuernavaca, July 6-8, 1974, Clark, Murray, Ashe, Schaffner/ Paratype *Anisostena confusa* Staines, det. C. L. Staines 1990 (red label) (TAMU). Paratype: 2 mi. se. Tecoman, Col., Mex., VII-20-66, P. M. & P. K. Wagner/ Paratype *Anisostena confusa* Staines, det. C. L. Staines 1990 (red label) (TAMU).

**Description:** Head: black; median sulcus present; vertex alutaceous; sulcus present on inner margin of each eye; row of punctures present on outer margin of each eye; frons and clypeus reddish; frons projecting at base of antennae. Antennal segment I subglobular; II-III cylindrical, II wider than III, subequal in length; IV-VI transverse, decreasing in length; VII-X transverse, wider than preceding, with setae; XI hirsute, pointed at apex; I-VI punctate. Pronotum: yellow, apical margin darkened; basal margin bisinuate; margined laterally; small tooth in anterior angles; covered with large punctures; surface between punctures alutaceous; length 0.7 mm (n=5); width 0.9 mm. Scutellum: black;

quadrate; alutaceous. Elytra: yellow with black sutural and lateral vittae; sutural vitta reaches to 1st puncture row; lateral vitta from lateral margin to 6th interspace; scutellar row of 2 punctures; intervals 2, 4, and 6 costate, 2 and 6 unite on apical fifth, 4 does not attain union by the diameter of a puncture; punctures touching or overlapping those in adjacent rows; lateral margins sparsely serrate; apical margin dentate; surface between punctures alutaceous; length 2.7-2.8 mm (avg. 2.75); width 1.1-1.3 mm (avg. 1.2). Venter: prosternum yellow; meso- and metasterna yellow in middle, dark laterally; abdominal sterna 1-2 yellow in middle, dark laterally; 3-5 brownish. Legs: femur yellow at base, dark for apical two-thirds, punctate; tibia dark, tuft of setae on inner apical margin; mesofemur serrate on inner margin; tarsi dark. Total length: 3.6 mm.

**Larval host plant:** unknown.

**Distribution:** Ecuador and Venezuela.

**Specimens examined:** ECUADOR: Guayas Prov.- San Antonio, 3 km S Manglaralto, 12-II-1987 (USNM). FRENCH GUYANA: no further data (USNM). MEXICO: Colima - 2 mi. SE Tecoman, 20-VII-1966 (TAMU). Morelos- 4.4 mi. E Cuernavaca, 6-8-VII-1974 (TAMU). VENEZUELA: Bolívar, 520 Guri Dam, 16-XI-1974 (DEFW). Total: 5.

### *Anisostena gracilis* (Horn)

#### Map 3

*Charistena gracilis* Horn 1883:298. Holotype: Columbus, Texas, 21/V/ MCZC type no. 8217 (MCZC).

*Anoplitis gracilis* (Horn). Weise 1911a:22, 1911b:33; Leng 1920:303; Uhmann 1957:78.

*Odontota gracilis* (Horn). Butte 1969:14.

*Sumitrosis gracilis* (Horn). Wilcox 1975:141.

*Anisostena gracilis* (Horn). Staines 1987:319; Noguera 1988:285.

**Description:** Body color orange-red or yellowish with black sutural vitta. Head: vertex micropunctate; median sulcus absent; frons not projecting at base of antennae; sulcus on inner margin of each eye; row of punctures on outer margin of each eye; eyes slightly protruding, finely faceted; interocular space concave; interantennal keel present. Antennae with last five segments expanded, segment I subglobose, orangish-red; II transverse, scattered setae present, orange-red, wider than III; III cylindrical, scattered setae present, reddish-brown,

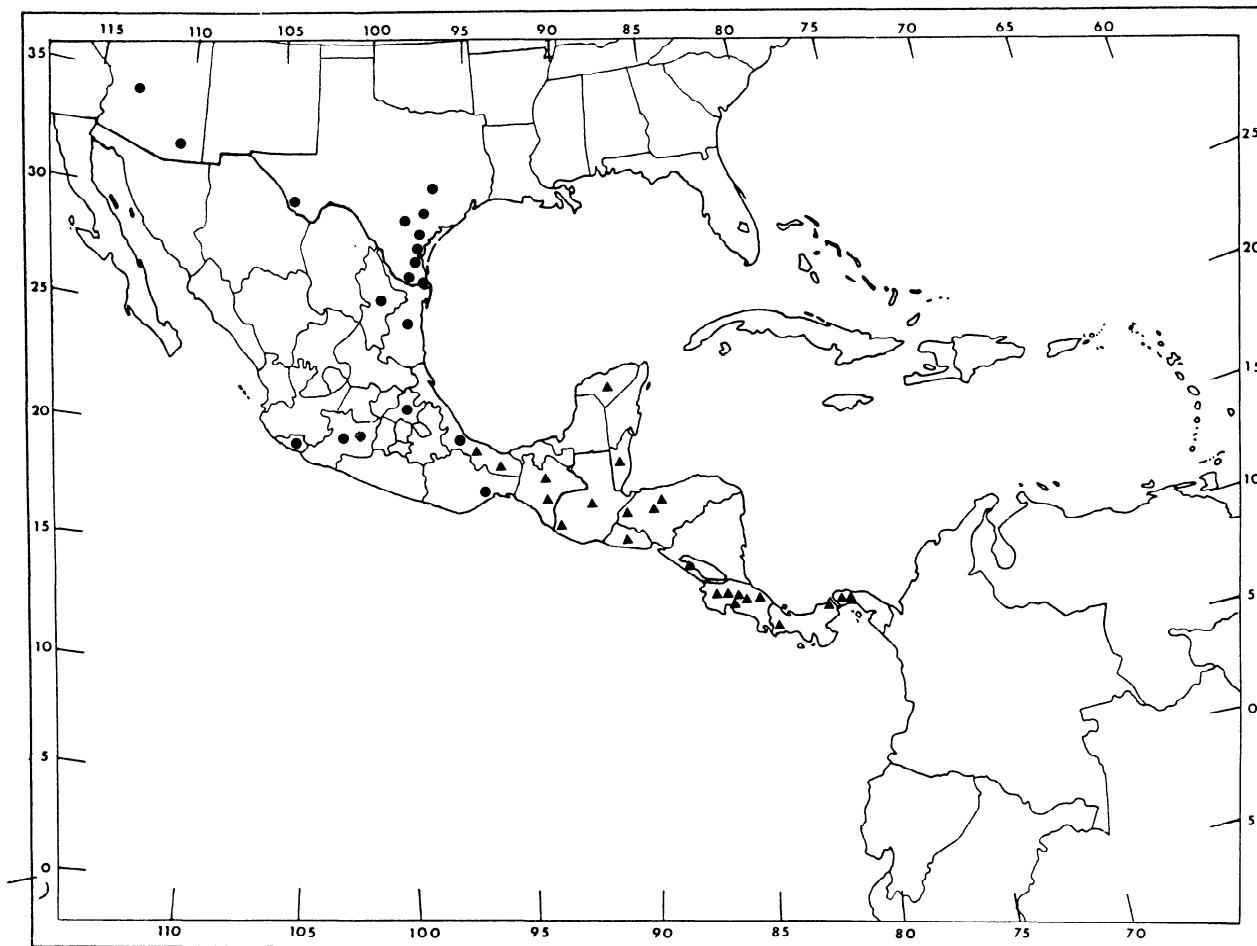

**Map 2.** Distribution of *Anisostena confusa*.

longer than II; IV-VI transverse, with scattered setae; VII-X transverse, hirsute; XI acutely pointed at apex, hirsute. Pronotum: convex; wider than long; width 0.7 to 0.9 mm (avg. 0.78, n=26), length 0.7 to 0.8 mm (avg. 0.72); lateral margins feebly arcuate; disk smooth; margins with scattered large, deep punctures; basal margin bisinuate; sides not emarginate. Scutellum: wider than long; quadrate; black; alutaceous. Elytra: parallel-sided, not widened apically; margin finely serrulate; elytral intervals and space between punctures alutaceous; sutural row of 2 punctures; intervals 2, 4, and 6 costate, 2 and 6 unite on apical fifth; black vitta

from suture to second puncture row; lateral margin usually with black vitta on basal half that at base reaches seventh puncture row, narrows apically; width 1.0 to 1.2 mm (avg. 1.1); length 2.3 to 3.0 mm (avg. 2.56). Venter: orange; alutaceous; some punctures laterally. Legs: orange; tarsi and apex of tibiae darker; femur punctate, mesofemur not serrate on inner margin; tibiae with tuft of setae at apex. Total length: 3.0 to 3.7 mm (avg. 3.28).

**Larval host plant:** *Panicum maximum* (Graminae) (Noguera, 1988).

**Description:** Vertex of head and elytral vittae shining aeneus green, pronotum and elytral background orangish-red. Head: vertex aeneus, frons orangish-red, projecting at base of antennae; vertex micropunctate; median sulcus not extending onto vertex; sulci on inner margin of each eye; row of punctures on outer margin of each eye; interocular area reddish. Antennae dark, except segment I which is reddish; segments VI-XI with setae, I-VI rugose; segment I subglobular; II and III cylindrical, subequal in length; IV-VI transverse, decreasing in length; VII-X transverse, wider than preceding; XI pointed at apex. Pronotum: apical margin darkened; covered with large scattered punctures, more dense laterally; basal transverse impression present; widest in middle; length 0.7-0.9 mm. (avg. 0.7, n=30); width 0.7-1.0 mm (avg. 0.8). Scutellum:

quadrate; greenish-black, micropunctate. Elytra: scutellar row with 3 punctures; sutural vitta extends to interval 2; lateral vitta embracing humerus, includes intervals 5-8; vittae usually unite on apical fifth; intervals 2, 4, and 6 costate; intervals 2 and 4 not strongly produced; 6 strongly produced; intervals 2 and 6 unite on apical fifth, 4 does not attain union by the diameter of a puncture; lateral margins parallel for basal third, then divergent; apical margins serrate, orangish-red; width 1.0-1.4 mm (avg. 1.2); length 2.1-3.1 mm (avg. 2.6). Legs: orangish-red except at joints and tarsi, which are black; femora punctate, mesofemur not serrate on inner margin. Venter: orangish; rugose at sides. Total length: 2.7-4.0 mm (avg. 3.4).

*Anisostena prompta* Weise. Uhmann 1932:36; Maulik 1937:135; Uhmann 1938:71; Monrós & Viana 1947:202.

**Description:** Head black, pronotum orangish-red with black maculae on disc and lateral margins, elytra orangish-red with black vittae from humeral angle to lateral margin. Head: black, shining; median sulcus faint; vertex alutaceous; front and frons red; frons projects forward; antennae black; clypeus smooth; vertex with punctures near eyes; sulcus on inner margin of each eye; row of punctures on outer margin of each eye; side of head alutaceous. Antennal segments punctured; segments I-II subglobular; III-IV cylindrical, II-III subequal in length; V-X transverse, becoming progressively wider; XI acutely pointed at apex. Pronotum: orangish-red with central black macula on disc and central black macula on lateral margins; convex; longer than wide; lateral margins evenly arcuate; basal margin bisinuate; disc densely punctured, punctures separated by less than diameter of a puncture; surface between punctures alutaceous; basal impression absent; length 0.9 mm (n=2); width 0.9 mm. Scutellum: black; alutaceous; trapezoidal. Elytra: parallel-sided; 8 puncture rows plus scutellar row of 2 punctures; intervals 2, 4, and 6 costate, 2 most pronounced, 4 and 6 less produced, all unite on

apical fifth; elytral vitta begins at fourth interval and continues to lateral margin; apices black; humeral angles produced; lateral margin indistinctly serrulate, apical margin distinctly serrulate; length 3.3-3.6 mm (avg. 3.45); width 1.1-1.3 mm (avg. 1.2). Venter: prosternum reddish-yellow; mesosternum orangish-red in middle, black at sides; metasternum black, rugose at sides; abdominal sterna, except for last three and apical half of preceding orangish-red, others black. Legs: orangish-red except for tarsi and apex of tibiae which are black; tibiae with fringe of setae at apex; mesofemur not serrate on inner margin. Total length: 4.3-4.4 mm.

**Larval host plant:** *Panicum leucophaeum* H. B. & K. (Gramineae).

**Distribution:** Argentina, Paraguay, and Brazil.

**Specimens examined:** ARGENTINA: Misiones - Loreto (USNM), IX-1953 (USNM); Puerto Iguazu, 16-XI-1988 (JW); Dep. Concep., Sta. Maria, X-1946 (USNM). BRAZIL: Minas Gerais, Sete Lagoas, IPEACO, 16-VI-1974 (FSCA); Sao Paulo (ZMHB), 5-I-1974 (CNC). COLOMBIA: Apiay, Meta, 14-VII-1965 (USNM); Guayabetal Cundinamarca, 14-VII-1965 (USNM); Peralonso Caño, Pachiaquiari, Meta, 4-IX-1965 (USNM); Villavicencio, Meta, 18-IX-1965, 2-X-1965, 4-XII-1965 (USNM). VENEZUELA: Cojedes, 10 km E. Apartaderos, 15-III-1982 (USNM); Exp. Territ. Amazonas, Puerto Ayacucho, 15-VI-1950 (USNM). Total: 26.

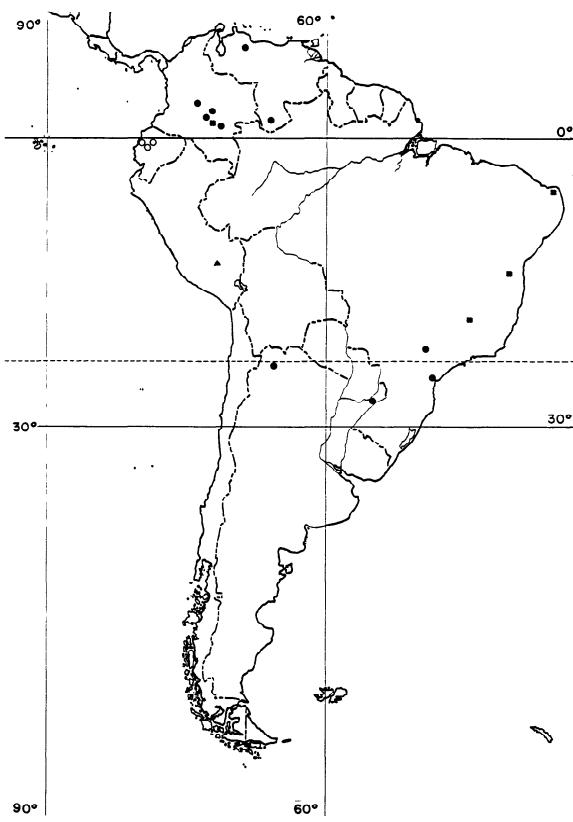

### *Anisostena promta fasciata* Maulik

#### Map 4

*Anisostena fasciata* Maulik 1930:87. Holotype: Type (white disk with red border)/ Brazil, Bahia, 1928, on grasses, Dr. G. Bondar, 1131/ Pres. by Imp. Bur. Ent. Brit. Mus. 1929-178 (reversed)/ Anisostena fasciata M., S. Maulik 1928 Type (BMNH). Paratypes: three with same data as holotype except first label- Paratype (white disk with yellow border) (BMNH).

*Anisostena promta fasciata* Maulik. Uhmann 1932:36; Lima 1955:209; Uhmann 1964a:17.

**Description:** Head black, pronotum yellow with black maculae, elytra black with yellow vittae. Head: median sulcus present; sulcus on inner margin of each eye; row of punctures on outer margin of each eye; vertex alutaceous. Antennal segment I subglobose, punctate; II-III cylindrical, subequal in length; IV-VI transverse, decreasing in length; VII-

**Map 4.** Distribution of *Anisostena* species: *promta promta* (closed circles), *promta fasciata* (squares), *scapularis* (triangles), *vittata* (open circles).

X transverse, wider than preceding; XI pointed at apex; VII-XI hirsute; area between eyes and frons yellow; clypeus black. Pronotum: yellow with central black macula; black macula on lateral margins; covered with coarse, deep punctures; prebasal impression present; basal margin bisinuate; apical margin darkened; lateral margins parallel for basal three-fourths then weakly convergent; small tooth in anterior angles; length 0.8-1.0 mm (avg. 0.8, n=6); width 0.7-0.9 mm (avg. 0.75). Scutellum: black; quadrate. Elytra: black, yellow vitta from interval 1 to 4th puncture row, extends from base to apex; apical margins dentate; lateral margins serrate; 8 regular puncture rows plus scutellar row of 2 punctures; intervals 2, 4, and 6 costate, all raised; all unite on apical fifth; length 3.4-4.0 mm (avg. 3.7); width 1.1-1.3 mm (avg. 1.2). Legs: femur yellow, apex dark; tibia and tarsi dark. Venter: prosternum yellow; meso- and metasterna yellow in middle, dark laterally; abdomen yellow except

last three segments which are dark. Total length: 4.1- 4.7 mm (avg. 4.3).

**Larval host plant:** unknown.

**Distribution:** Brazil to Colombia.

**Specimens examined:** BRAZIL: Bahia, 1928 (BMNH); Minas Gerais, Damantina, 4-III-1956 (USNM); Muri Est. do Rio, 1000 m, 26-XII-1949 (USNM); Natal, Rio Grande do Norte, 24-X-1951 (USNM); Rezende Estado de Rio, Feb. 1924 (BPBM). COLOMBIA: Peralonso, Cano Pachiaquiari, Meta, 4-IX-1965 (USNM). Total: 11.

#### *Anisostena scapularis* Uhmann Map 4

*Anisostena scapularis* Uhmann 1964a:734. (Type not seen, deposited in Museum G. Frey). Gaedike & Döbler 1971:359.

**Description:** Body black with two yellow maculae on pronotum and yellow markings on each elytron. Head: vertex micropunctate; row of punctures behind eye; median sulcus present. Antennal segment I subglobular; II-III cylindrical, III longer than II; IV-VI transverse, decreasing in length; VII-X transverse, wider than preceding; XI pointed at apex. Pronotum: weakly transverse; lateral margins almost parallel; disc impunctate; weak impression near base; black with yellowish maculae on lateral margins; tooth in anterior angles; length 1.4 mm (n=2); width 1.14 mm. Scutellum: quadrate. Elytra: apices individually rounded; black markings at base reach interval 2, gradually expand outward until after middle, then expand rapidly so that basal third all black, rest of elytra yellow; scutellar row of 2 punctures; lateral margin dentate, more so at apex; intervals 2, 4, and 6 costate, all raised; width 1.5 mm; length 2.3-2.4 mm. Legs: base of femur yellow, rest black. Total length: 4.7-4.85 mm.

**Larval host plant:** unknown.

**Distribution:** Peru.

**Specimens examined:** PERU: no further data (MZLU). Total: 2.

#### *Anisostena suturalis* (Weise) Map 5

*Charistena suturalis* Weise 1907:205. Holotype: Nogales, St. Cruz Co., IX.29.06, Ariz./ Coll'd by F. W. Nunenmacher/ 105502/ I. Weise det./ Holo-typus (orange label)/ Zool. Mus. Berlin/ Anisostena suturalis m/ Charistena suturalis m (reversed) (ZMHB).

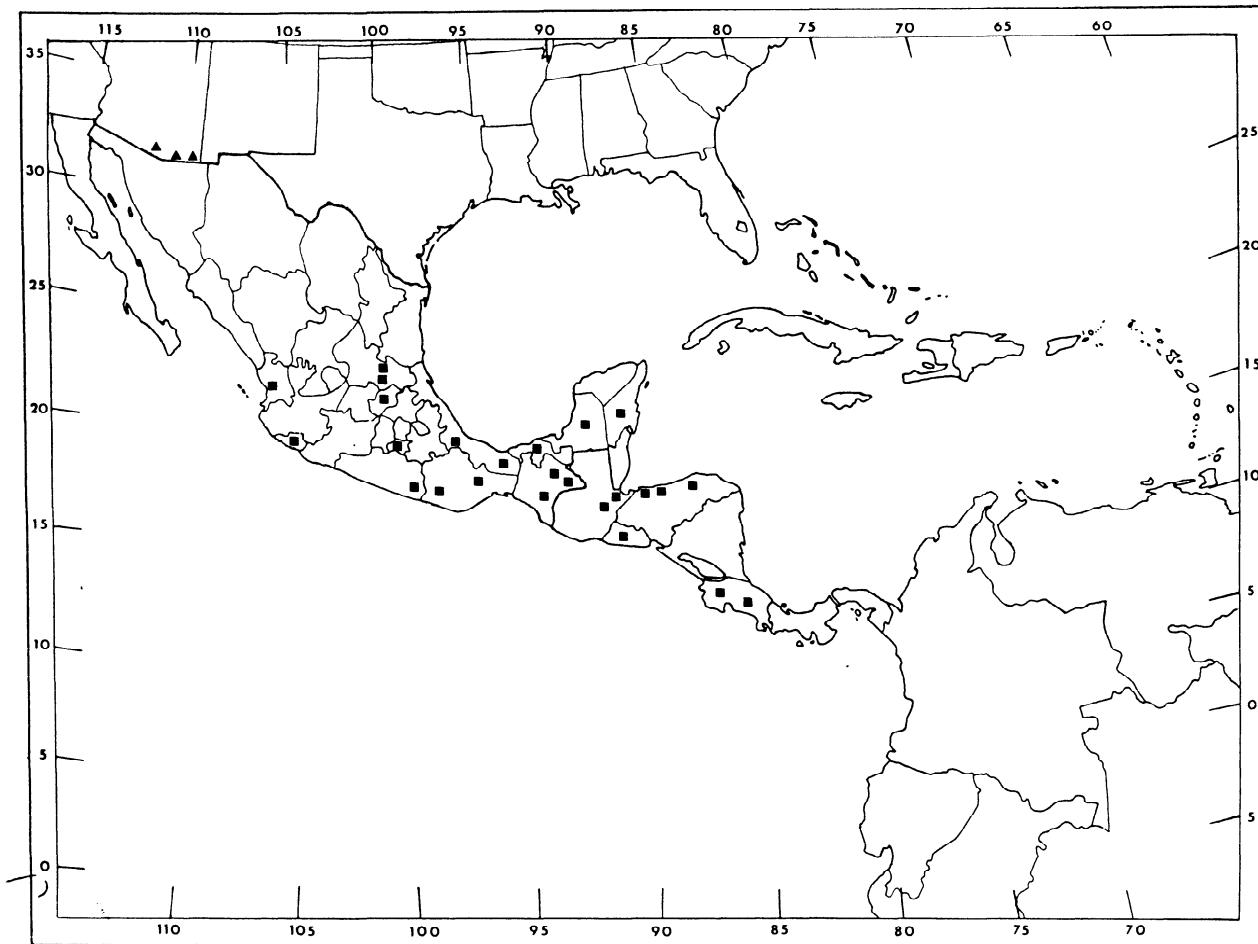

*Anisostena suturalis* (Weise). Weise 1911a:22, 1911b:33; Leng 1920:303; Papp 1953:59; Uhmann 1957:75; Wilcox 1975:140.

**Description:** Dorsal color orangish-yellow, elytra with a dark sutural vitta. Head: yellowish-orange; median sulcus faint; concave between eyes; frons projecting, yellow; clypeus darker, punctate; vertex micropunctate; sulcus on inner margin of each eye; row of punctures on outer margin of each eye. Antennal segments punctate; segment I subglobular; II-V transverse, II longer than III, IV-V smaller; VI-X transverse, gradually widening, VII-X with a band of setae at apex; XI hirsute, acutely pointed. Pronotum: covered with coarse, deep punctures; punctures separated by less than the diameter of a puncture; apical margin darker; basal and lateral sides margined; disc with small impunctate area; surface between punctures micropunctate; basal margin bisinuate; lateral margins evenly arcuate; small tooth in anterior angles; evenly convex; basal impression absent; length 0.7-0.9 mm (avg. 0.9, n=8); pronotal width 0.9 mm. Scutellum: quadrate; micropunctate; brownish. Elytra: 8 regular puncture rows plus scutellar row of one puncture; vitta reaches to 1st or 2nd puncture row; vitta narrows posteriorly until only suture is covered; intervals 2, 4, and 6 with highly produced carinae, 2 and 6 unite on apical fifth, 4 does not attain union by the diameter of a puncture; punctures discreet; lateral margins sparsely dentate; apical margins dentate; apical margins conjointly rounded; length 2.7-2.9 mm (avg. 2.9); width 1.1-1.3 mm (avg. 1.1). Legs: yellowish-orange, tarsi darker; mesofemur not serrate on inner margin. Venter: yellowish-orange. Total length: 3.4-4.0 mm. (avg. 3.75).

**Larval host plant:** unknown.

**Description:** Body orange, pronotum may have black markings, elytra with black sutural and lateral vittae. Head: vertex punctate; median sulcus present; area between eyes slightly concave; sulcus present on inner margin of each eye; frons projecting at base of antennae; interantennal keel sharp. Antennal segment I orange, subglobose, punctate; II-XI balck; II transverse; III cylindricial, subequal in length to II; IV-VI transverse, decreasing in size; VII-XI wider than preceding, hirsute, XI acutely pointed. Pronotum: surface between punctures alutaceous; completely margined; sparsely punctate with large, coarse punctures uniformly distributed; apical margin darker; lateral margins sometimes black; transverse subbasal depression present; lateral margins parallel for basal half, then strongly convergent; basal margin bisinuate; length 0.7-0.9 mm (avg. 0.76; n=13); width 0.7-1.0 mm (avg. 0.76). Scutellum: black; alutaceous; quadrate. Elytra: scutellar row of 2 punctures; suture with black vitta extending to puncture row 2; black vitta on lateral margin, extends to interval 6 and humerus, stops at apical fifth; lateral margin sparsely dentate; apical margin dentate; apices individually rounded; intervals 2, 4, and 6 costate, interval 6 most pronounced; intervals 2 & 6 unite on apical fifth, 4 does not attain union by the diameter of a puncture; length 2.1-3.0 mm (avg. 2.38); width 1.0-1.3 mm (avg. 1.06). Legs: femora clavate, orange, mesofemur not serrate on inner margin; tibiae orange, black at apex, widens gradually to apex, tuft of setae at apex; tarsi blackish-brown, I-III with pad of setae beneath, I small, triangular; II larger, expanded; III bilobed, 3/4 length of IV; IV cylindrical. Venter: orange, entirely alutaceous; last abdominal segment dark in center. Total length: 2.8-3.8 mm (avg. 3.1).

(FSCA). One- Ecuador, Los Rios Quevedo (40 kms S), 11-VII-1975, Cohen Peterson & Thorndal/ Ecuador-Peace Corps-Smithsonian Institution Aquatic Insect Survey (USNM).

**Description:** Head black, pronotum orange, elytra black with yellow vitta. Head: black; median sulcus faint; frons projecting at base of antennae; vertex alutaceous; sulcus on inner margin of each eye; row of punctures on outer margin of each eye. Antennal segment I subglobular, as long as II; II-III cylindri-

cal, III longer than II; IV-VI transverse, decreasing in length; VII- X transverse, wider than preceding, with setae; XI pointed at apex, hirsute. Pronotum: orange; basal margin bisinuate; lateral margins evenly arcuate; apical margin darker; covered with large punctures; slight prebasal impression; surface between punctures alutaceous; length 0.6-0.7 mm (avg. 0.6; n=13); width 0.7-0.9 mm (avg. 0.8). Scutellum: black; quadrate; alutaceous. Elytra: black with yellow vitta basally from scutellar row to interval 4, narrows apically until only interspace 2 yellow, disappears on apical fifth; apical margins serrate; lateral margins smooth; surface between punctures alutaceous; intervals 2, 4, and 6 costate, 2 and 6 unite on apical fifth, 4 does not attain union by the diameter of a puncture; interval 2 at base wider than others, as wide as the diameter of a puncture, narrows apically; punctures in rows 1-2 and 3-4 alternate, those in rows 5-6 and 7-8 are opposite; length 2.6-2.7 mm (avg. 2.6); width 1.0-1.3 mm (avg. 1.1). Legs: brownish; inner margin of mesofemur not serrate; tibiae with setae at apex. Venter: prosternum red, alutaceous; mesosternum red in middle, alutaceous, black laterally, punctate; metasternum black alutaceous, row of punctures along lateral margin; abdominal sternites reddish-brown, smooth in middle, alutaceous at sides. Total length: 3.1-3.4 mm (avg. 3.3).

**Larval host plant:** unknown.

**Distribution:** Ecuador.

**Specimens examined:** **ECUADOR:** **Guardando Prov.**- Los Rios Quavedo (40 kms S), 11-VII-1975 (USNM). **Manabi Prov.**- Montecrist, II-1983 (CNC). **Pinchincha Prov.**- Rio Palanque Res.
