

ICONES PLEUROTHALLIDINARUM  
(ORCHIDACEAE)

## MISCELLANEOUS SPECIES IN THE PLEUROTHALLIDINAE

*Carlyle A. Luer\**

With this concluding double issue of volume III and volume I, 300 species of the Pleurothallidinae have been illustrated and described. The total number of species in about 20 genera is probably near 2000. About 1400 descriptions in *Pleurothallis*, and about 500 descriptions in *Masdevallia* have been published. The number of species in *Pleurothallis* is over 900, and in *Masdevallia*, about 300. Check-lists and keys for various regions and countries will begin to appear in later volumes.

## ADDENDA et CORRIGENDA

## SELBYANA

- 1:67 Remove *Pleurothallis arietina* and *P. nelsonii* from the synonymy of *P. crocodiliceps*.
- 1:90 Remove *Pleurothallis alpina* from the synonymy of *P. sicaria*.
- 1:200 This species, apparently heretofore undescribed, was identified as *Pleurothallis excavata*. See page 318 for a new description.
- 1:201 Figure 36. PLEUROTHALLIS IMAGO Luer.
- 1:254 This species, apparently heretofore undescribed, was identified as *Pleurothallis magnipetala*. See page 366 for a new description.
- 1:255 Figure 62. PLEUROTHALLIS PROLATICOLLARIS Luer.
- 3:16 **Masdevallia tenuissima** C. Schweinf., Bot. Mus. Leafl. 4:111. 1937.  
*Masdevallia butcheri* Luer, Selbyana 3:16. 1976.  
After reconsideration, I believe that the species described as *M. butcheri* is conspecific with *M. tenuissima*.
- 3:17 Figure 111. MASDEVALLIA TENUISSIMA C. Schweinf.
- 3:78 Small plants of *Pleurothallis cogniauxiana* Schltr. from Ecuador and Panama were erroneously identified as *P. coffeicola*. See pages 270 and 271, Figure 142.
- 3:160 **Pleurothallis scandens** Ames, Sched. Orchid. 5:18. 1923.  
*Pleurothallis pennellia* Luer, Selbyana 3:160. 1976.  
After nearly two years in cultivation, the plant on which the description of *P. pennellia* was based, has grown into a markedly scandent plant indistinguishable from that of *P. scandens*. The minor differences of the lip are nonspecific.
- 3:161 Delete.
