

TYPE MATERIAL OF STOLZ'S AFRICAN ORCHIDACEAE
CONSERVED AT THE NATURHISTORISKA
RIKSMUSEET, STOCKHOLM (s)

ERIC A. CHRISTENSON

The Marie Selby Botanical Gardens, 811 South Palm Avenue,
Sarasota, Florida 34236

ABSTRACT. The herbarium at s has a set of Stolz specimens of African Orchidaceae. A list of 81 Stolz type specimens of species described by Schlechter in 1915 is presented.

The significance of herbarium collections of Orchidaceae by Adolf Stolz has been reviewed by van der Laan (1987). Stolz's extensive collecting of plants in the Nyasa highland (present-day Tanzania) between 1899 and 1914 included numerous orchids. The primary set of his collections at Berlin was studied by Schlechter who published an account of the orchids (Schlechter, 1915). Unfortunately the first set of Stolz's orchid specimens was lost when the Berlin herbarium was partially destroyed during World War II (Ames, 1944).

Van der Laan (1987) mentions a number of herbaria with Stolz collections including the Naturhistoriska riksmuseet at Stockholm (s). In August 1987 I had the opportunity to examine the Stolz collections in the riksmuseet and an inventory of the type material conserved at s is presented here as a supplement to the detailed analysis of van der Laan. Readers are referred to van der Laan (1987) for a full account of Stolz collections in the Netherlands as well as taxonomic comments.

The National Museum, Prague (PR), should be added to the list of herbaria in van der Laan (1987) known to have some Stolz material. The set at PR is small and only includes two type

numbers: *Stolz 3*, isotype of *Calanthe stolzii* Schltr.; and *Stolz 2080*, isotype of *Chamaeangis sarcophylla* Schltr.

The taxa in TABLE 1 are listed alphabetically by the names published by Schlechter (1915). Nontype material is not considered here. All Stolz type material at s has been annotated and the type specimens have been transferred from the general herbarium to the type herbarium.

ACKNOWLEDGMENTS

I thank B. Nordenstam and J. Soják for allowing me access to specimens at s and PR, respectively.
