

SCHLECHTER'S ASIAN COLLECTIONS OF ORCHIDACEAE CONSERVED AT THE SWEDISH MUSEUM OF NATURAL HISTORY, STOCKHOLM (S) AND THE NATIONAL MUSEUM, PRAGUE (PR)

ERIC A. CHRISTENSON

The Marie Selby Botanical Gardens, 811 South Palm Avenue,
Sarasota, Florida 34236

ABSTRACT. The herbarium at S has 284 Schlechter collections (with duplicates) of Orchidaceae from the Celebes (Sulawesi), New Caledonia, Papua New Guinea, Sarawak, and Sumatra that include 107 isotypes and 46 isosyntypes. The herbarium at PR has 32 Schlechter collections of Orchidaceae from New Caledonia that include eight isotypes and five isosyntypes. Lists of these collections are presented.

There are inherent problems interpreting very old taxonomic work because the methodology of systematists working prior to the International Code of Botanical Nomenclature varied. A lack of authentic herbarium material can cause problems interpreting early authors' intended taxonomic limits. Some botanists apparently either did not make herbarium specimens or if specimens were made, their whereabouts remain unknown and they must now be presumed lost. Other early botanists were selective and only preserved material of selected taxa (e.g., Loureiro, *fide* Merrill, 1935). Determining whether or not herbarium material was preserved and if such material is still extant consumes an inordinate amount of effort on the part of any taxonomist who must cope with older literature and collections.

Irrespective of the state of collections older taxa must be typified, lectotypified or neotypified if some measure of nomenclatural stability is to be achieved. The need to designate lecto- or neotype specimens all too often leads to further complications, both taxonomic and nomenclatural. Lectotypification has caused difficulties in *Dendrobium* Sw. (Brieger, 1975), *Oncidium* Sw. (Pfeiffer, 1874; Britton & Millspaugh, 1920; Garay, 1970; Garay & Sweet, 1972a, 1972b; Williams & Dressler, 1973; Garay & Stacy, 1974; Brieger, 1975; Dressler, 1975; Dressler & Williams, 1975; Brummitt, 1978), and *Stelis* Sw. (Garay, 1980; Brummitt, 1983). Lectotypification of orchid taxa has occurred sporadically in floras (Garay & Sweet, 1974; Garay, 1978; Geerinck, 1984), monographs (Cribb, 1983; Reeve, 1983; Chase, 1986), and occasional papers (Reeve & Woods, 1981). With the exception of Barringer (1986), however, there has been little systematic work to typify orchid taxa.

The difficulties of taxonomic interpretation are not restricted to the distant, pre-Code past, however. The contributions of several 20th century

workers have been rendered difficult to interpret by incidents beyond their control. Events that markedly affect our ability to understand Asian Orchidaceae were the destruction of two herbaria during World War II, The Herbarium of the Bureau of Science at Manila and the Botanisches Museum Berlin-Dahlem (B) at Berlin (Ames, 1944). The Philippine orchid taxa represented at Manila before the war were largely duplicated at the Orchid Herbarium of Oakes Ames (AMES) and most of the critical orchid types were removed to AMES where they are conserved.

The destruction of the herbarium at B was a serious loss to botanists because of the size and worldwide scope of the institution. The simultaneous loss of the orchid herbarium and particularly Rudolf Schlechter's orchid herbarium was a devastating blow to orchid taxonomists. During his relatively short life, Schlechter published extensively on the orchids of nearly every portion of the world. The loss of his herbarium with its numerous authoritatively annotated specimens was a tragedy. The loss of thousands of orchid types in his herbarium is an ongoing problem facing taxonomists attempting to fully comprehend Schlechter's taxa.

Schlechter's neotropical taxa were based on material gathered by a number of collectors other than Schlechter. His African taxa were based both on the collections of others as well as his own. A recent inventory by van der Laan (1987) identified the whereabouts of a number of critical African specimens described by Schlechter from Stoltz's collections (Schlechter, 1915). Schlechter's Asian orchid taxa were based almost entirely on his own collections made during two trips in 1901–1902 and 1906–1909. The impact from the loss of his first set of specimens (including holotypes) becomes apparent when one considers Schlechter's many publications concerning the orchids of the region (Schlechter, 1907, 1910, 1911, 1911–1912, 1911–1914).

TABLE 1. Rudolf Schlechter's Asiatic collections of Orchidaceae conserved at the Naturhistoriska riksmuseet, Stockholm (s).

Slowly, the whereabouts of Schlechter's Asian duplicates are being established through international efforts. A general indication of herbaria with Schlechter's New Guinea orchid material was provided by Woods (1966). This publication has been supplemented by individual herbarium

inventories of the Jardin Botaniques, Geneve (G) (Blaxell, 1978), Missouri Botanical Garden (MO) (Lewis, 1966; Christenson, 1987), the National Herbarium of New South Wales (NSW) (Rupp, 1950; Blaxell, 1973, 1975) and a general survey of some European herbaria (Cribb & Wood, unpubl.). Although not specific to orchids, the list given by Vegter (1986) is the most complete and meticulous guide of herbaria known to have Schlechter material.

Listed here are the 284 Schlechter Asian specimens conserved at the Swedish Museum of Natural History in Stockholm (TABLE 1) and the 32 Schlechter New Caledonian specimens conserved at the National Museum in Prague (TABLE 2). Following the precedent set by Blaxell (1973, et seq.) only the status of these specimens as either isotypes or isosyntypes is given. Lectotypification is postponed pending detailed study of the taxa and careful examination of all specimens. It is hoped that inventories such as the one presented here will aid monographers in locating the most appropriate material for lectotypification.

ACKNOWLEDGMENTS

I thank B. Nordenstam and J. Soják for allowing me access to specimens at S and PR, respectively, and to S. Dalstrom for his assistance in compiling the list of specimens at S. I also thank P. J. Cribb (K) and J. J. Wood (K) for sharing their unpublished manuscript on Schlechter duplicates in European herbaria and K. Barker (US) for her assistance with a library reference.
